>

Not a useful discussion. Dropping the code test does not mean that there will be no need for the existing subbands. If all 600,000+ US amateurs are now eligible for HF operation and take advantage of that eligibility, the bands could be really chaotic. The DX stations may very well hope we keep the subbands in place. It will probably be even more necessary to continue to keep the subbands and I would expect to see more emphasis placed on following the voluntary band plans.

You invested your time, interest, and self in the amateur license. You merely put money into the curbs and gutters. In the minds of many people, the investment in your amateur license was far greater that your investment in curbs and gutters.

>
> The things that I value the very most quite honestly are literal gifts

> my boat, or the QSL collection in the closet.
>

The love of your wife and all these things are not free and are not gifts. A loving relationship requires a large and continuous investment of self (not money) to endure and to be worth while. Each of the other items also requires some type of investment from you that doesn't necessary involve money.

Investment is not exclusively a monetary term.

There are lots of logical arguments for retaining code testing. And lots of
logical arguments for getting rid of it.

Ultimately it comes down to people's opinions about what should and should not
be tested.

>That is
>to say, they value it because it's hard instead of because it's necessary

Thank Ralph Nader for putting Dubya in office. Every poll I know of showed that
the majority of RN voters would have either stayed home or voted for Algore.

Almost poetic that the Green Party candidate who took on GM put a Texas oilman
in the Oval Office.

Now, now Hans... Surely you know the value in charging your clients. If you do not, they will not attach nearly as much importance to the therapy they recieve. That's a fact of life.

Generally the PCTA crowd has been putting most of the
people who challenge thier position and willing to debate
thier points on thier killfiles. Sounds pretty much like it
is they, not the NCTA, that can handle the scrutiny
and are therefore obviously on thin ice.

EXACTLY.

Everybody I know direly and sincerely want to win the lottery, and
don't mind one bit knowing that the ticket only costs them $1... and
I doubt seriously everybody who has been plunged into millionaire
status stays up at night worrying about the fact that they didn't
work for the money.

I believe the "you enjoy more if you work for it" line is just a
way of trying to get people to do something they rather had
not do.

It's more what you haven't done, Mike, although some of even what you have done. You can't nudge "this one" in the side, wink at that one over there, and pat this one on the back and then stand in the middle of the street suggesting to everyone that we "should all get along."

I, for one--and maybe the only one--don't trust people like that. You sit on the fence. I'm waiting to get spike by the barbed wire.

I hardly present my opinion based on one thread, Mike. And, if you feel like you are being "lumped" with "these guys" then perhaps you should review your own alliances--as I wouldn't appreciate the connotation of being called a "these guys."

Why does it have to be your way or no way, Hans? I think Jim's right to a certain degree, and I think your right to a certain degree--it all depends upon what is being valued and who is doing the evaluating.

The only one of those, above, that is a literal gift is the wind at sunset on Lake Vermilion. The rest cost you plenty.

Absolutely. Were they as free as Hans seems to think they are, I really wonder how valuable they would be.

I know what you mean, John.

Why, not too long ago I knew a fellow who "owned" an e mail reflector that would grandiosly "ban" people from his list that didn't share HIS specific opinions on things.

Some way to get in the last word, huh...???

> It should also be noted that, to non-hams, this whole argument
> undoubtedly seems quite childish.

Since this forum is about Amateur Radio FOR Amateur Radio operators (realizing that it IS an open, unmoderated forum, of course), it is irrelevent as to what "non-hams" think. No one, regardless of thier position on ANY subject, "owes" it to anyone who is NOT a licensed and participating operator, to explain each and evry reason for ANY opinion.

If you are not experienced in a specific pursuit you shouldn't insult those who are. For example I would not be found in a NASCAR fan-club forum, nor in one dedicated to gardening...at least as anything other than a passive reader. Unless you are ASKING for help, it's a matter of common courtesy.

Actually it will only be the end of an era.

The .0003% of the Amateur community that espouse any opinion to the contrary will go thier own way, and the other .0003% who constantly deride them for THIER opinions will go thier way too.

And Amateur Radio, just like it has for the last 80+ years already past, will go on.

> find something worthwhile to discuss in this NG...like for example,
> how do we refarm the subbands once there's no longer any need for 'em?

Big mistake there, John.

Ironically, the ONLY two "CW Only" subbands in ANY US Amateur allocation are in the 6 and 2 meter bands. Even more ironic is the amount of time NCT folks have "debated" the need for CW on HF, yet not a single person, NCT or otherwise, to my knowledge, has ever challenged those >>VHF<< segments...

Looooooooong after the requirement for code testing has slipped past us, there will be a lasting need for NARROWBAND subbands, John. PACTOR, AMTOR, PSK31, RTTY, and a host of other digital modes populate those segments. THOSE folks will be no more willing to face an influx of voice operators than CW ops would be.

Furthermore, the elimination of code testing will NOT eliminate the presence of code USERS for some time to come.

Once the code test has been eliminated, I expect we can see an increase in not only voice users, but digital mode operation will increase too. So while we can expect a gradual decrease in the number of stations employing CW, we will simultaneously see an influx of folks who will need those "digital" allocations.

So don't get your hopes up, KC2HMZ, that the end of code testing will open 20 meters up from end to end for yakkity-yakers. The dynamics of Amateur HF practice exceed the code issue significantly.

>
> Are they the model we hams should follow, or should
> we take them as a cautionary tale of what could happen
> to us?

I wasn't offering CB as a model. In fact, because of its rather unique history, I don't think one can use CB as a model for much of anything. CB went to h*ll in a hand basket after Hollywood associated it with the illegal activities shown in several movies of the time (Convoy, Smokey & the Bandit, and so on).

The movie, Smokey & the Bandit, was almost classroom instruction on how to use a CB radio, with Bert Renolds ("Bandit") showing Sally Fields ("Frog") what buttons to push and what to say. As you may remember, this movie was about a trucker moving illegal cargo across the country as quickly as possible, while "Bandit" (with "Frog" riding along) distracted police away from the truck using his faster car. CB radios were used throughout the movie.

Obviously, movies like these attracted people with the same "outlaw" mentality to CB Radio. Today, these people attract others like themselves to CB Radio. However, if Hollywood had used Ham Radio in those movies instead, perhaps these same people would have been attracted to Ham Radio and Ham Radio would have the problems today instead of CB Radio. But, as it is, Ham Radio does not offer the same attractions for these people (the "outlaw" image, anonymous operation, and so on). Because of that, most of these people have no interested in Ham Radio. The few who are interested in Ham Radio are attracted for what Ham Radio has to offer, not what CB has to offer. Therefore, these people are not likely to display the same CB-like behavior in the Ham Radio frequencies. The fact that a good number, perhaps the majority, of today's Ham Operators owned a CB radio sometime in the past (or present) supports this conclusion.

> Now which is the better deal?

My message was an attempt to undermine Bruce's many posts trashing Technicians (he is the one constantly bringing up the CB nonsense), not to make any real comparisons between CB and Ham Radio (or CB'ers and Technicians).

> the ARS in the process.

"Collateral damage", John...???

You've been watching too much CNN.

You wouldn't be talking about the "damage" created by the influx of over a quarter of a million NON-code licensees, would you?

Or would that be by the "damage" created by Amateur volunteers in the last 80+ years that has earned Amateur Radio the respect and hearldry bestowed upon it by the American Red Cross, the Deaprtment of State, the Department of Defense, the Salvation Army, FEMA, etc etc etc...??? (Not to mention mentions in the Federal Register and accolades rendered on the House and Senate floor)

Perhaps you were alluding to the "damage" created by the creation of a radio repeater net that has withstood fire, flood, maelstrom and terrorist attack...Is THAT the "damage" you were refering to? I heard all the "complaints" about it from about two dozen New York and New Jersey emergency response groups from all the "trouble" they created in September 2001...You should read all the things some of those guys had to say about Amatuer Radio!

Maybe you meant the "damage" created by the fact that we are (generally) self-policing and allowed by the FCC to mentor our own? I don't see the commercial services being allowed to do this, but I guess I am missing something...

Or I guess you were refering to the "damage" caused by the interruption of our schools by such programs as ARISS and SAREX...??? I can see how taking little Johnny and Mary away from recess to chat wwith orbiting astronauts might inhibit thier imaginations...

And I guess we sure got our "come-uppance" when we were allocated new bands on HF in the last 20 years.

Otherwise, I haven't got a clue of what you were alluding to...And I doubt YOU did either, John.

John, let's examine that paragraph a little closer with the intent of
furthering your own comprehension.

FCC sed...

"We believe that an individual's ability to demonstrate increased
> Morse code proficiency is not necessarily indicative of that
> individual's ability to contribute to the advancement of the radio
> art."

Well, that was demonstrated when they lowered the maximum code sped test
to 5wpm. That would be a n example of "increased code speed" being dropped.

then.............

"As a result, we find that such a license qualification rule is
> not in furtherance of the purpose of the amateur service and we do not
> believe that it continues to serve a regulatory purpose."

Yes indeed, that is exactly the point upon which they acted when
they reduced the code test to 5wpm.

then finally you requote...........

"...such a license qualification rule is not in furtherance of the
> purpose of the amateur service...

Which clearly means they didn't intend to retain a fast code test
for amateur licensing. Which fact they acted upon in the resulting R&O.

So where does any of that indicate they have any intent whatever to
completely drop all code testing?????

Dick

John KC2HCZ strolled out and proclaimed...
>>>>>
"We note, moreover, that the design of modern communications systems, including personal communication services, satellite, fiber optic, and high definition television systems, are based on digital communication technologies. We also note that no communication system has been designed in many years that depends on hand-keyed telegraphy or the ability to receive messages in Morse code by ear. In contrast, modern communication systems are designed to be automated systems. Given the changes that have occurred in communications in the last fifty years, we believe that reducing the emphasis on telegraphy proficiency as a licensing requirement will allow the amateur service to, as it has in the past, attract technically inclined persons, particularly the youth of our country, and encourage them to learn and to prepare themselves in the areas where the United States needs expertise."

SOURCE -- The Federal Communications Commission
In the Matter of WT Docket No. 98-143 RM-9148 RM-9150 RM-9196
1998 Biennial Regulatory Review
Amendment of Part 97 of the Commission's Amateur Service Rules.
REPORT AND ORDER
Adopted: December 22, 1999 Released: December 30, 1999

You may now proceed to thank me for finally clearing this up.
>>>>>

John I sure hope you don't strain your elbow patting yerself on your back prematurely.

There is still NOTHING in there which even remotely suggests that FCC has any intent to completely drop code testing. The operative word was **REDUCING* which - Gee!- they already did!

Would you be kind enough to provide a direct FCC quotation which
supports that assertion? I haven't been able to find one, much as I've
read and watched for it to come scrolling by.

What I DO see is that you codehaters have made several erroneous
assuptions based on your wishes instead of reading what was written
by FCC.

> There's still time for you to change your mind before a report & order
> comes out, though...
>

Yeah, you too, John. In fact I wouldn't be in a hurry to see
a new R&O, if I were you. The person at FCC who matters has stated
very publicly that one wasn't likely anytime soon.

Without a desire to communicate with Morse Code, there is no truth to that statement at all. Even with that (the all being equal aspect), there is no truth to the "more experienced" or "more qualified" when it comes to absolutely anything beyond Morse Code. Therefore, those two have no place in that paragraph without Morse Code, not the radio amateur, specified as the "more" being discussed. Therefore, only the "more radio communications options" has any significant ring of truth to it.

Some of it makes some sense. an older ham I know got his license
back when he was in an army signal core training course, which included
CW. The people in his group were granted two day passes to visit the
FCC field office to take ham tests. All passed the code test, but only
my friend passed the written. The way he tells it, few even bothered to
fill in any of that test. This was in the early fifties during Korea, and
the highest they had then was the general license.

So it may have been that the people in the eham story were "required"
to take ham tests to get weekend passes or other such prize.

And by your logic, if it qualifies for the term, a marksman
who practices on a target range weekly is no better qualified
as a marksman than someone who has never picked up a weapon
because the 'someone' has no interest in shooting. Lame.

You've been dangling the above for a few days now. Sorry, I don't buy it. One of the principles that makes up the Basis And Purpose of the ARS is "Expansion of the existing reservoir within the amateur radio service of trained operators, technicians, and electronics experts."

The design of modern communications equipment is based on digital electronics. Learning about digital electronics, therefore, is in keeping with the Basis And Purpose.

There's nothing in the Basis And Purpose about telegraphy.

FCC has already allowed that "because the amateur service is fundamentally a technical service, the emphasis on Morse code proficiency as a licensing requirement does not comport with the basis and purpose of the service."

(Both quotes above are from FCC's report & order on the last round of restructuring in the ARS)

>>Clint has subsequently elaborated on his comment, citing government
>> subsidizing of the agricultural industry as one example, demonstrating
>> that this is in fact what he had in mind as well.
>
>What major industry in this country is *not* subsidized in some way?

Um, well, there's the porn industry, I suppose...but other than that, you're right, there's a lot of subsidizing going on. However, that doesn't mean that I, or anyone else for that matter, wants the government to select my recreational activities for me on my behalf. I'll make my own choices, thank you.

>fine, let 'em have at it.

I don't agree with unlimited signal bandwidths on HF - that means one guy trying out some ultrawide digital mode wipes out the whole subband and nobody else can experiment until he's through playing around. Not just locally, but if the band is open, the subband's wiped out over a significant portion of the planet.

I could agree with this on the microwave bands, though, where the signals don't travel as far and there are far fewer users in line to use the spectrum that is available.

>Meanwhile, give the Novices and Tech Pluses more HF space than those
>four little slots.

I definitely agree with that.

Not necessarily.

That's true, of course. Again, though, refarming the Novice subbands
doesn't necessarily mean that Novices lose the privileges to operate
at those frequencies. It all depends on how you do the refarming.

> I.e. dropping the code test
>would not eliminate the Novice or any other class.

I'm nitpicking now, of course, but I think it would, in a way - it
would eliminate the Tech-Plus, which, although it's no longer shown in
FCC's database, is still for all intents and purposes a license class,
in that any Technician who's passed a code test receives the operating
privileges that were associated with that license class when the words
were still being printed on licenses (and any Tech-Plus who hasn't
renewed yet still has the words on the license).

>If the simplest approach
>is taken to this change (simply dropping the code requirement), we would
>actually have an immediate increase in people with access to the Novice
>subbands as all Techs, not just Techs with code, would now be able to

>operate there. So this should increase the need to keep these bands
>allocated to the Novice/Technician groups.

I think it will create a need for even *more* spectrum to be allocated to those groups - and bear in mind it's not an exclusive allocation; General, Advanced and Extra licensees can operate there as well, as long as they stay at 200 watts or less - but the question is, how many of them are going to be using CW absent a code testing requirement, and how many will be on other modes?

We're told by some PCTAs that once the test is eliminated, the stock of CW operators in the ARS is going to dry up - to hear them tell it, like a wet lawn on a sunny day in July. If they're correct (and with the way some of those folks toss around insults I have to admit that if I was a Technician the last thing I'd be interested in doing is learning code just so I could get on the air and work the same guy who just raked me over the coals in this NG), there's going to be a need for more space for all the new phone ops the PCTAs seem to be fearing the arrival of. Meanwhile, CW is already authorized on any frequency where an amateur has operating privileges, so why continue to have subbands at all?

>share HIS specific opinions on things.

If it's the person I think it is, the reflector in question was one
where the list owner had to approve all requests to subscribe to the
group. This is not that uncommon with reflectors. In fact, I'm
currently subscribed to five reflectors where subscriptions must be
approved by the list owner first.

There were only two subscriptions to that particular list that were
ever turned down by the list owner, and they were from two persons
whose behavior on Usenet gave the list owner reason to believe that
the two individuals in question were not likely to contribute anything
worthwhile and, in fact, would probably behave the same way they did
on Usenet. Thus, he did not grant them access to the reflector. The
terms of service agreement with the server operator expressly granted
the listowner that right, and he exercised it.

> Some way to get in the last word, huh...???

The bottom line in this matter is that reflector listowners,
moderators on moderated Usenet newsgroups, and even Internet Service
Providers - and before that moderators on FidoNet and sysops on
landline BBSes, have been blocking access by undesirables and
troublemakers since personal computers first started popping up on
household desktops. Anyone whose access is thus blocked remains free
to start their own reflector/newsgroup/echo/BBS/ISP and spout whatever
drivel he or she sees fit on their OWN time...not on someone else's.

>course), it is irrelevent as to what "non-hams" think.

That strikes me as a rather shortsided view that fails to take into account how the rest of the radio hobby view hams and the amateur radio service. Since the non-hams who read this and other public forum where ham radio is discussed by hams retain the right to vote for the politicians who make the laws that affect us - antenna restrictions, to name one important one - the perception of hams and the ARS by non-hams most certainly *is* relevant to ham radio. Why make enemies when it isn't necessary?

>No one,
>regardless of thier position on ANY subject, "owes" it to anyone who
>is NOT a licensed and participating operator, to explain each and evry
>reason for ANY opinion.

The FCC commissioners aren't licensed hams, Steve. Yet, when you filed your comments on restructuring, you probably did a lot of explaining with respect to your opinion on the topic of the proceeding.

> If you are not experienced in a specific pursuit you shouldn't
>insult those who are.

In general, I agree. I also feel that those who are experienced in a specific pursuit generally shouldn't insult those who are not. I say "in general" and "generally" because some people merely get what they ask for.

>For example I would not be found in a NASCAR
>fan-club forum, nor in one dedicated to gardening...at least as
>anything other than a passive reader. Unless you are ASKING for help,
>it's a matter of common courtesy.

Well, as you said, this forum is about Amateur Radio, and is for Amateur Radio operators, and as a licensed ham, I do have some experience in this specific pursuit. I can also remember back to when I was not yet a licensed ham, and I recall that this debate about code testing was going on back then, and to me as a non-ham it looked quite a bit like a bunch of kids arguing over who was going to bat first in a sandlot baseball game. It wasn't meant as an insult, it was meant as an observation that this is a public forum that can be read by anyone and that perhaps we ought to be more aware of the way we present ourselves and the ARS in such a forum - and the comment was especially aimed at the minority of regular participants here who routinely find it necessary to toss around insults like candy on halloween. I guess it's one of those instances where if the shoe fits, wear it, if not, then forget about it...frankly, I think the only people who might be offended by what I said would be the ones who are "guilty as charged."

> lot more homebrew HF stations?

Lets face it, homebrewing just isn't very popular today, in any license class. Part of that is due to changing radio technology. It's fairly hard to homebrew a radio today capable of competing with even the most basic commercial product. Most are simply choosing to buy rather than build.

Those who are interested in electronics mainly focus their efforts on things outside ham radio. For example, I'm currently interested in robotics. At the same time, I'm doing almost nothing (electronics related) in ham radio itself. A friend, also a ham, is obsessed with security devices. Likewise, I don't see him doing much in ham radio. But, of course, most I've met have no interest in electronics at all, or limit that to kit building or very simple projects.

So, to answer your question, I don't think we're going to see a lot more homebrew HF stations, with or without a change in the code testing requirement.

Logic is not your strong point, Dick. You're talking about two people's qualifications as a marksman. If Jim had said "more experienced" or "more qualified" in Morse Code (as you talked about qualified as a marksman), there would be no dispute. But, with that interpreted as saying a radio amateur with code skills is "more experienced" and "more qualified" than one without code skills, there is a conflict - it's simply not true. If it were true, a brand new ham who passed a code test yesterday would be "more experienced" than someone without code skills who has been a ham for ten years.

[See why I disputed your "all things being equal" premise, Jim? Few are even going to notice it.]

Naaaah. THIS John was providing this NG with a daily dose of
silly and easily refuted obfuscation. When he realized I was a
"subscriber" on a Yahoogroups e mail reflector he moderated, he
removed my "subscription"...This despite the reflector had nothing to
do with the code issue or any of the exchanges herein. It was his way
of having the "last word", in as much as every time he posted here he
made a fool out of himself.

Judging by current affairs, not too much has changed.

There's been other rumors of running afoul of the CIVIL courts
and getting booted by his ISP for his misconduct, but I don't have all
those details.

Perhaps he'd like to bring us up to date...?!?!

I learned it as a Boy Scout also. However, in my case, that was a very long time ago (when the Empire State building was the largest building in New York - mentioned only because our troop when there during the New York World's Fair in the early 60's).

As you know, that's only one part of the "battle cry," Bert. The rest is that about half the radio amateurs today (Technicians) don't know code (culture), that most who do know code don't use it (tradition), that code is not used for our service to those outside Amateur Radio (rules), and so on.

> (snip) Calling the 5-wpm exam a barrier is just plain silly (snip)

It is a barrier to those who have no interest in Morse Code. Nothing more and nothing less.

I've repeatedly said I have no interest whatsoever in learning code. Doesn't that qualify as "insufficiently motivated?"

> Because it beats a blank. BTW, were you one of those who
> said that the VHF and up privies of your license were sufficient
> for your needs? How long after Element 1 is dropped can I
> address you as W5NET/AE, hmm?

Actually, I probably wouldn't rush out to upgrade. I have no place to install HF antennas, and probably will not for several more years. In fact, I'm in a situation now where my participation in VHF/UHF is even somewhat hindered. As such, upgrading my license will serve no purpose anytime soon. Therefore, I'll probably just leave what I have well enough alone.

Haven't see you in here lately, Bill. Have you been hiding out or did I just miss your messages? Anyway, that's the point I'm trying to make. While Morse Code may be the greatest operating mode to ever come along, a testing requirement for it is just not necessary today. As such, that testing requirement should go.

I've never made such a claim, so have no response to any counter-claim.

> Skill in Morse Code, even at a very basic level, permits
> amateurs to use radio equipment ranging from very simple
> to highly advanced designs, and technologies of almost
> any vintage. (snip)

Skill in Morse Code is certainly not unique in that ability, Jim. In fact, almost any knowledge of radio would allow that.

> Morse Code skill encourages amateurs to actually build
> their own radio equipment by offering an easy first step,
> and a growth path that leads to almost any usable
> technology. (snip)

With almost every commercial radio today equipped to transmit code, why would that be true? Few today, even those with an interest in code, are building their own equipment. Instead, most are using the same type of equipment I've purchased.

> I speak from direct experience in amateur radio home
> construction, having built my first amateur station at
> age 13. (snip)

How many 13 year old kids today, with or without a ham license, with or without code skills, are building their own radio equipment today?

> The removal of the Morse Code test from the Technician
> class license has not resulted in a technical revolution in
> amateur radio from newly-licensed "technically qualified"
> amateurs. (snip)

I didn't know the Technician license was supposed to lead to a technical revolution in anything, Jim. Instead, I thought they were just supposed to participate in the same activities most other Amateur Radio operators are participating in. Why the unique expectation for Technician license holders alone?

> Instead, the continued progress in amateur technical efforts
> continues to be mostly the result of work done by
> experienced amateurs, even though the Technician class
> license has not had a code test for more than 12 years.

Which "amateur technical efforts" are you referring to, Jim? I must have missed something because I haven't seen much technical efforts from ANY of the operators I've met over the last few years, regardless of license class.

>activities shown in several movies of the time (Convoy, Smokey & the Bandit,
>and so on).

I disagree.

Those movies came out *after* wholesale disregard for the rules was already very common on 27. (Although I've never been a cb user, I have listened there since the mid-'60s and known many cb users).

At least in the areas where I've lived, regard for the rules was pretty much tossed away by the mid-to-late 1960s. FCC tried to enforce the rules, but their forces were simply too few.

Never saw the whole thing. This was in the era of antihero movies like "Bonnie and Clyde", "Dirty Mary Crazy Larry" and such.

> Obviously, movies like these attracted people with the same "outlaw"
>mentality to CB Radio. Today, these people attract others like themselves to
>CB Radio.

That mentality was already in place before the movies were made.

>However, if Hollywood had used Ham Radio in those movies instead,
>perhaps these same people would have been attracted to Ham Radio and Ham
>Radio would have the problems today instead of CB Radio.

But ham radio did not have that "outlaw" mentality. And, back then, such activities would have brought down tremendous peer opposition by the rest of the ham community. For example, trying to operate without callsigns on a ham band would get you DFed and reported to FCC. Not so on 27.

Also, the complexity and cost of amateur equipment at the time meant a serious investment was needed just to get started.

>But, as it is, Ham
>Radio does not offer the same attractions for these people (the "outlaw"
>image, anonymous operation, and so on).

Only because *existing* hams have the *tradition* of not tolerating such behavior.

>Because of that, most of these
>people have no interested in Ham Radio. The few who are interested in Ham
>Radio are attracted for what Ham Radio has to offer, not what CB has to
>offer. Therefore, these people are not likely to display the same CB-like
>behavior in the Ham Radio frequencies. The fact that a good number, perhaps
>the majority, of today's Ham Operators owned a CB radio sometime in the past
>(or present) supports this conclusion.

Yet in my experience there has been a longstanding problem with the cb "outlaw" culture trying to migrate to amateur radio. In this area, at least, we have had serious problems on VHF/UHF repeaters from newcomers who saw 2 meters as a noise-free version of cb. When their behavior (cussing, failure to ID, refusing to share the repeater, threats to those who disagreed with them, etc.) was challenged by other hams, they said "We did this things on 11 and there's nobody going to stop us from doing them here. We don't care what your stupid rules say, we're gonna have our fun and if you don't like it, go away". (Almost verbatim quote.)

The only ace-in-the-hole we had was the ability to shut down the repeater. Even that did not always work because these folks would sometimes guess the codes.

I believe the whole thing, at least at that facility, was an Air Force project. My father maintained the equipment (I don't think he had anything to do with collecting information). There were perhaps a dozen (at most, perhaps less) other guys working there. I never saw all of the people at one time, so that's just a guess. At least three of those were civilians (or at least I never saw them in a uniform). It was probably related to SAC (Strategic Air Command), because that's where my father worked just before and after that duty assignment. A few years later, he went to a similar (he said) facility in Korea and, still later, another in Greenland. He mentioned once where the information went to, but I only have a vague recollection of that and no idea today where he said.

Might be the company you keep Dwight! 8^) Unless you are counting only the building of the transciever itself, homebrewing is alive and well. I make all the parts of my shack that I can, and know many hams that do likewise. lots of cool stuff to build. Interfaces, anps, all sorts of monitoring and test equipment, and more.

But its true, there aren't that many people building the rigs themselves.

You're off by a few years. Back in the early 70's, I used a CB in our company trucks, and there were plenty of rulebreakers then. Most every time I had to buy parts from a local, I got to see their overheight towers and linear amps.

Sorry, but the 'investment' was trivial. Long before I thought about
getting an amateur license I already knew Morse code and electronics.
A couple hours brushing up on the common-sense rules was all the
'self' I put into it.

I value my amateur privileges very highly, but the 'cost of entry' was
almost non-existent.

That's right. Does passing the General or Extra written exam make someone an
electronics expert?

Do you know any hams who, upon passing the General and/or Extra exams, suddenly
decided to start building their equipment instead of buying it?
>
>The design of modern communications equipment is based on digital
>electronics.

Partly. There's also a lot of analog stuff in there.

>Learning about digital electronics, therefore, is in
>keeping with the Basis And Purpose.
>
Of course.

But why *must* hams be tested on digital electronics beyond the level of the
Tech exam? Is the digital electronics used in HF/MF amateur radio equipment
somehow different from the digital electronics used in VHF/UHF amateur radio
equipment?

Why must all that theory stuff be forced down prospective HF hams' throats
whether they are interested in it or not?

>There's nothing in the Basis And Purpose about telegraphy.

Sure there is - it's under "trained operators".

There's nothing in the "Basis And Purpose about digital electronics, either.
>
>FCC has already allowed that "because the amateur service is

>proficiency as a licensing requirement does not comport with the basis
>and purpose of the service."
>
>(Both quotes above are from FCC's report & order on the last round of
>restructuring in the ARS)
>
This is the same FCC that thinks BPL is a good idea, remember. And the same FCC that will probably take 2 years to drop Element 1.

And the same FCC that radically reduced the written tests in that same restructuring.

Here's proof of my argument about the content of the writtens:

A newcomer can get a Tech license by passing the current 35 question Element 2. That license permits the new ham to use any authorized mode on any authorized amateur frequency above 30 MHz. Every amateur HF/MF mode is also allowed on VHF/UHF, and the power limits are the same. So FCC obviously thinks that the 35 question Tech test is a valid indicator of what a ham needs to know to design/build/repair/align and operate any amateur station on VHF/UHF.

But even after the code test is passed, a new ham has to pass more written tests to get more than 'Novice' privileges on HF/MF. Of course the General and Extra writtens contain some "necessary" propagation, regulatory and safety stuff that is not in the Tech test. But the rest is stuff that is not absolutely necessary to design/build/repair/align and operate any amateur station on HF/MF.

Add to this the fact that the only difference in operating privileges between a General class ham and an Extra is a few bits of spectrum on 4 of the 9 HF/MF bands, and it becomes very clear that most of the General and Extra written exams are also "government-subsidized life-support system for an anachronism" and/or "a welfare program".

The situation is made even clearer by the emergence of rigs that cover both HF and VHF/UHF. A Tech can buy, repair, align, and operate, say, an FT-897. Why is said Tech qualified to use its full capabilities on 2 meters but not on 20 meters?

Now you might say that the tests "encourage" hams to become more "technical". Have you ever observed that effect on hams who were not inclined to be "technical" before they took the General and Extra class writtens?

Which activity is more prevalent in amateur radio today: Hams operating CW, or hams designing and building their own radio equipment from scratch?

Why must there be a test for all that stuff if it's not necessary to the safe and legal operation of an amateur radio station? How many doctors, lawyers, and other people who would be great hams are we keeping out because they are not interested in all that technical stuff? (We could sure use more hams who are

lawyers to help fight CC&Rs and BPL!)

Except for some extremely basic stuff on regulations and safety, *everything*
in the tests is the result of somebody's opinion.

An oft-repeated argument against the code test is that code operation is no
longer absolutely necessary for any operation, so there's no absolute need to
test for it. Apply the same logic to the writtens, and a lot of what's in them
has to go as well. It's an inescapable logical conclusion.

>I'll make my own choices, thank you.

Your recreational choices are being subsidized and chosen for you as well.

If you like hiking and camping as recreational activities, there's a whole
system of parks, forests and wilderness areas, set aside by the government, for
those activities. But if you want to be a lumberjack for a recreational
activity, you cannot cut down trees in those areas. You have to go elsewhere,
almost always to private property.

The same is true in part for any mode.

But if it really bothers you that much, then perhaps the rule could be "any
mode less than X kHz wide" where X is, say, 5 or 10 kHz rather than the entire
subband.

It would be problematic only if the CG were still trying to use the
code.

And this is Ham Radio. Perhaps the ARRL could put up a shelter for
the codeless (similar to shelters for the homeless).

Three hots and a cot, and hours and hours of code practice and speed
runs.

And no requirement to shave daily.

Of course you can quote your source for these assertions, yes? I'd love to
see 'em put it to a vote. No internet polls...just a "one ham, one ballot"
vote. Oh, it shouldn't be just hams? Horsefeathers, WE define OUR
hobby/service. If a prospective ham feels that strongly about it, enter the
fold and then be heard.

> , that code is
> not used for our service to those outside Amateur Radio (rules), and so

That's odd, I've QSO'd via phone with a number of ops on 20 that have no
interest in Morse code, yet they did not let the code elements (Much less,
solely Element 1.) deter them from earning HF privies. It's just a
requirement to be fulfilled. Nothing more, nothing less.

> > Frankly, I have much more respect for someone with the

It would if it remained your individual issue, sure. Instead it's morphed into an "international" movement, the result of which will devalue AR as a whole. Then it's our issue...and many may hold you responsible. I know I'd NEVER snub a licensed ARO OTA...but it'd be foolish to believe that everybody will roll out the welcome mat for known NCTA's. (Sad as it is.) Welcome to HF, Dwight. Be careful what you wish for.

Try QRP, Dwight. You'll love it. Some of the newer antennas are made to be used in just your situation and are no bigger than VHF mobil antennas. There's also a special feeling of accomplishment with making a contact with 2-1/2 Watts into an "invisible" wire dipole or longwire strung temporarily from a window.

Whats amazing is these NCTA think they should be welcomed with open arms, and thanked for getting a license. I for one will never welcome a No-Code into Ham Radio. Because to me they are nothing more than CBplussers, looking for more Welfare Handouts.

I will try to end your wondering. First, I don't "seem to think"; for my value system I "know". All of the things I mentioned are among the things I value the very most in life. They come to me as free unconditional gifts which no amount of 'investment' would earn. In other words, their value is completely independent of their cost.

Without putting words in anyones mouth, it appears from the posts of you, Jim and Dee, that your value system is based on 'investment gives beneficial results'. In my value system, the 'results' are valued solely on merit without regard to how I acquired them.

As a kind of crude example, the value of two $10.00 bills, one which I found on the street and the other which I performed hard labor to earn are exactly equal. What I 'invested' in either one is absolutely immaterial when calculating their value --- the corner grocer will take either one and give me precisely the same change when I purchase a jar of olives.

Taking it back to the context of this thread, my amateur license or my drivers license or my fishing license have value to me based on the beneficial things I can do with them. The value is not related in any fashion to the 'cost' or 'effort' that it took to obtain the license.

Good post, and good argument, Hans.

But I wonder if there is no place for pride of accomplishment? In my other hobby, I spent several years making a large telescope. It was an intense project, and took a lot of effort. In the end, I was rewarded with a wonderful, beautiful, and very high quality instrument. It won first place in the only competition I entered it in.

I'm very proud of it, and very proud of being able to accomplish such a feat with my own hands. I would have no such thoughts about the purchase of a commercial telescope of somewhat similar style. So something must be going on there.

Gee, that's funny! - I can't imagine why any ham worthy of the name would run down another ham because of his liscense level.

I personally know a tech who was riding on a convoy from Kuwait to Bagdhad a week or so ago, and within a few hours of entering Iraq, ended up in a firefight and saved several of his comerads while sending a couple of those crapulent terrorist dudes they have over there to their final rewards.

Hey, he'll be back from his tour over there in a year or so... Maybe I can get the two of you together so that you can talk trash about techs to his face. - If you think you are up to it.

Oh, but I forgot... You are another one of those no-callsign "anonymous" mother's mistakes who get on here from time to time to bash hams and ham radio. Another anti-ham Troll.

Never mind.

But that's not what the context is. The intent of the original
statement is clear that he is referring to his (Rich's) supporters.

"Rich is not missed save by a few of his malingerers."

Malingerers is clearly a noun. In the case you try to make, it would
be descriptive of his, what? supporters? apologists? In other words,
more like an adjective. Then what is it modifying? Nothing.

In other words, you are trying to convince us that the original poster
was saying that "Rich is not missed save by a few [people who feign
illness or inability]." Sorry, no sale.

I will concede that I've never heard promulgate used in that fashion.
Sue me. I will not concede, however, that given the whole text of the

definition (which refers to publishing laws or proclamations) that the original poster's use was appropriate, particularly in the context of the original post.

>In fact, "perpetuate" is another perfectly good synonym, contrary to the >erroneous statement by "master language butcher" LRod.

Interesting propaganda technique there; citing a source and using actual material from it, then adding one's own thoughts in the same paragraph to give the impression one's own ideas are also from that source. Please cite any source in which "perpetuate" is a synonym to "promulgate." It's certainly not in the ones you used.

>Perhaps "LRod" would do well to consult a dictionary himself before >attempting to correct someone else.

Just one? Why, you used at least two, neither of them mainstream, to try and make your point. Something wrong with http://www.m-w.com ?

>Instead of the intended result, LRod, you now have your foot firmly planted >in your own mouth.

I know you'd like to think so, but, I refer you to Mark Twain's essay "Fenimore Cooper's Literary Offenses" in which he describes, with a musical metaphor, Cooper's misuse of words as "sharping and flatting" his way along. The vocabulary use in the original poster's message fell short in substantially the same way.

Well, I recall you mentioned knowing how to use a bug when you went aboard ship in the Navy. So how and when did you learn it if not as a ham? You learned Morse to speeds fast enough to qualify for a ham ticket early, then. One wonders how and where. as that's most unusual unless you were employed in radiotlegraphy somewhere.

Methinks you downplay it all to much for NCI Agenda reasons.

All that aside, the learning "cost" whenever and under whatever circumstances. You "paid" for that education whether you first used it for ham radio or for something else first.

It would add *some* potential validity to the "trained (in Morse) pool of
operators" part of 97.1 ... however, that is not the case and hasn't been
for some time ...

It wouldn't be a "slam-dunk" in favor of continued Morse testing for
HF ham licenses though.

I agree with Hans 100%+ on this one ... the value is in what they let
you do, not what you had to do to get them.

Hans, it's novel that you share the life view of a fella named
Willie Sutton who said he robbed banks "Because that's where
the money is".

How else to explain your implied lack of pride in accomplishment
and pride of ownership of things that you earned or built with
your own personal efforts?

95. Re: The way to stop BPL

In article <d22b54c3.0309291023.3ae7187a@posting.google.com>, kelly@dvol.com (Brian Kelly) writes:

>The ARRL submission is the *only* by-the-numbers engineering study on
>record so far and it has the BPL proponents in a royal snit.

Incorrect. See the Comments of Dr. Michael Keane, Michael Tope, Alfred Lorona, and Leo McVey. Individuals who took the time and trouble to make their own critical technical comments.

If you had actually examined a few hundred of the Comments from groups and organizations NOT in line with the BPL advocates, you would have seen more "by the numbers" refutation of the BPL advocates' claims.

>They're
>*not* brushing it off by any means, they're vigorously attacking it,
>they know they have a battle on their hands so don't underestimate the
>ARRL's ability to be a spoiler far out of proportion to it's political
>and/or financial clout. David did take out Goliath, etc.

A catalytic reaction does not require the catalyst to be big or powerful and the ARRL membership is NOT the sole victim of future RF pollution from BPL if it is implemented.

From almost 5000 Comments so far (as of Tuesday evening), there are a number of Comments from already-established broadband Internet providers using telephone and/or cable service means. Those are the Goliaths who are up against the Davids of the BPL...and the only "slingshot" the BPL advocates have is in doing a sales/marketing effort on the Commission back in early Spring.

Had you looked at the listing of documents on Docket 03-104 you would have seen a number of Comments from non-amateur-radio groups, including a long one from the Academy of Model Aeronautics (175,000 membership).

>Technical
>submissions are not over either, the NTIA is gonna weigh in eventually
>which could very well be the slam dunk BPL killer.

Docket 03-104 was published first at the FCC on 28 April 2003 and was a Notice of Inquiry regarding information the FCC could use for the purposes of establishing regulations for Part 15, Title 47 CFR.

03-104 was never any establishment that BPL would be in the future or ever get beyond the test stage, regardless of the Hue and Cry and

the General Hysteria exhibited by so many...who have not made any intellectual commentary on it of public record.

>That's your point, Carl, not my point.

OK, we'll put you down for "not demonstrating qualifications."

>The original story told how, back in 1978, the whole class of CG folks
>went down to FCC and became Extras, while today none of them did.

1978 was 25 years ago. This isn't 1978.

In 25 years, a child could be conceived, raised, educated, and become a working adult on their own.

Things are NOT static in time just because they are (apparently) fresh
in your mind.

>My point was simply that there are significant differences between the
>1978 and 2003 situations, such as:
>
>- the 1978 class was 'required' to take the test, and means provided
>to do so (do you think they went on their own time? used their own
>transportation? paid any fees?).
>
>- the 1978 class had already learned all they needed to know to pass
>the 1978 tests.

Which means WHAT?

Members of ANY branch of the US military in 1978 were ALL
volunteers. ALL.

>> If someone already has the knowledge to pass the tests, fine.
>
>You can't change that situation anyway.

Is this to be entirely about the PAST...again?

You cannot undo history. That has already happened...that's why it is
called history.

You can NOT use the PAST as a valid argument to have any knowledge,
skills, arts, or crafts preserved for the present and future with any
validity.

>> There is no "value added" in "making them work for it"
>
>Who said there was? The point is that the 1978 class had a completely
>different situation from the 2003 class.

You are slowly beginning to see reality. Congratulations.

>> ... if
>> they have the knowledge they are qualified, period.
>
>So would you agree with Kim that anyone who can pass the required
>tests should be allowed into the ARS?

Are you talking about the USCG or US amateur radio?

You are confusing, hopping around on subjects...

The ONLY agency awarding grants (in the form of licenses) for operating
on allocated amateur radio frequencies is the FCC. The USCG has
nothing to do with it.

>>(and likely
>> they worked for it or they wouldn't have the knowledge anyway,
>> so the logic of "making them work (more)" fails)
>

>It is a fact of human nature that most people value a thing more if it
>took some investment of themselves to acquire.

Which leads everyone to the implied reason of all PCTAs arguing for
the retention of code testing: They had to do it so everyone else had
better damn well do it, too!!!

>Using the mode sure does.

What about when NOT using morse code?

Remember that morse code is only the secondmost used mode and then
only on HF bands.

>>If that is true, then a person who
>>passed a code test yesterday is more experienced than a person who got his
>>license ten years ago without knowing code, and more experienced than all
>>those in the other radio services where code is not used.
>
>No, that's not what is being said.

That is what was IMPLIED.

>>More rounded in what?
>
>In the communications methods actually used by radio amateurs. A ham license
is
>a license to operate an amateur station in the amateur radio bands, not to
>particiapte in other radio services.

US radio amateurs use VOICE more than on-off keying CW.

Nothing is stated in Part 97 CFR referring to amateur radio operators
as "ham" operators or having "ham" licenses.

In the USA, the FDA would regulate ham.

>> Emergency communications?
>
>To a very small degree. Ask KT4ST - he's been there, done that.

We have NO actual evidence available for that. Being some kind of
local emergency manager is NOT factual evidence of actual
emergency communications.

>>Moonbounce? Satellites?
>

>A lot of amateur moonbounce and satellite work has been done with Morse code.

Accurately show the values or percentages of US amateur radio
extraterrestrial communications.

>> And if a person with
>>code was truly more able to provide communications under adverse conditions,
>>all radio services would still be relying on code.
>
>No, that's not true.

It is ABSOLUTELY TRUE. Denial does not alter reality.

>Other radio services use radio as a means to an end, not an end in itself.
Most
>of them have the complete elimination of radio operators and radio operating
>skill as a goal. That's why the maritime service phased out Morse code on the
>high seas - they wanted to save the cost of having radio officers on their
>ships.

The purpose of radio on waterborne vessels is for the purpose of
COMMUNICATIONS. It was never about maintaining some kind of
standards on operating radios, maintaining radio operators, or
preserving some kind of "tradition" of old-time radio.

Feel free to look at Part 1, Title 47 CFR, to see that the FCC has
added more radio license categories for watercraft communications
and safety than ever existed for radiotelegraphy.

>>They aren't. In the end, these are all code myths.
>
>No, they are misunderstandings by those who don't like the code test.

UNQUESTIONABLE INCORRECT in the reality of world use of radio.

>Here, try this one:
>
>"All else being equal, a radio amateur who has Morse Code skills is more
>experienced, more qualified, and has more radio communications options
>available than a radio amateur with no Morse Code skills."

That is what is referred to as a "loaded" statement which automatically
implies that morse code users are somehow "superior" communicators.

The loading comes from the opening "All else being equal."

US amateur radio regulations do NOT specify that morse code MUST be
used over and above any other mode.

US amateur radio regulations allow free and optional use of ANY
allocated mode, any frequency band.

Your statement would be correct ONLY if morse code was required for
USE by all US radio amateurs. It is not so.

The amateur radio service is NOT the "amateur radiotelegraphy service."

>Because it's not a skill that most people will have learned elsewhere.

Invalid as to federal regulations.

The FCC was not chartered in 1934 to be some kind of educational
organization encouraging or promoting morse code use.

>Most prospective hams already know how to read, write, talk and type. Most dod
>not know any Morse code.

Irrelevant as to federal regulations.

>>Notice
>>that I'm not asking why a person would want to learn code on their own.

>
>Some claim that Morse Code testing is at odds with the purpose of the amateur
>radio service as a fundamentally technical service. But in the practical
>experience of thousands of amateurs, the opposite is true.

There are over 600 thousand US amateur radio licensees. Please show
proof of your claim of "practical experience of thousands of amateurs..."

Try not to misdirect into areas not under discussion.

>Skill in Morse Code, even at a very basic level, permits amateurs to use radio
>equipment ranging from very simple to highly advanced designs, and
>technologies of almost any vintage.

The purpose of the US amateur radio service, as defined in Part 97.1,
Title 47 CFR, is NOT to be some living museum of radio or radio arts.

Skill at morse code, at any level, is NOT required or even necessary
to OPERATE radio equipment, any complexity, any vintage, that does
NOT use on-off keying coding for communication.

>Morse Code skill encourages amateurs to actually build
>their own radio equipment by offering an easy first step, and a growth path
>that leads to almost any usable technology.

Unproven. Unjustifiable.

Morse code skill is a psychomotor skill which has NO direct or even
remote relationship to building, designing, or even conceiving of radio
equipment.

>It must be remembered that most
>radio amateurs are self-trained and do not have access to professional level
>resources.

One "professional level resource" is a BOOK.

There are thousands of text books available on the market today which
are not published by the ARRL.

>Few amateurs today would consider a single-sideband transceiver as a
>first project, but the home construction of Morse Code equipment is possible
>for almost all amateurs.

"Home construction of morse code equipment" can consist of a switch
(code key), wire, and buzzer. Hardly rocket science.

>I speak from direct experience in amateur radio home construction, having
built
>my first amateur station at age 13. Since then I have built many more projects
>of increasing complexity, and much of my current amateur radio station is
>entirely homemade.

So, the way you did it is the role model for all others?

"Homemade" has diverged from older definitions of design and build to
just assembling kits, such as from Elecraft.

Kit building is not exactly "home made" and certainly not DESIGNED
by the builder/assembler.

>The construction of my early stations led me to an
>electrical engineering degree and career.

The majority of EEs of today got there from INTEREST in electrical
and electronic engineering and NOT by having a "ham" license
first.

>The removal of the Morse Code test from the Technician class license has not
>resulted in a technical revolution in amateur radio from newly-licensed
>"technically qualified" amateurs.

False analogy.

Most (by photo evidence, overwhelmingly so) communications equipment
used by radio amateurs is READY-BUILT, designed by others,
assembled and tested by others. It has been so for over three decades.
See any collection of amateur radio related periodicals to confirm that.

The "technical revolution in amateur radio" has come from RADIO EQUIPMENT
MANUFACTURERS. See any collection of amateur radio related periodicals
to confirm that. See any collection of radio related periodicals to confirm
that.

USE of already designed and manufactured radio equipment is simply USE
and NOT "advancing some technical art in radio."

>Instead, the continued progress in amateur
>technical efforts continues to be mostly the result of work done by
experienced
>amateurs, even though the Technician class license has not had a code test for
>more than 12 years.

ENTIRELY FALSE analogy. Unrelated and unproven.

All vague inference.

Trying to "convince" others by using false and misleading inferences is very
"bad form" and equivalent to the vague generalities of the BPL advocates in
response to FCC Docket 03-104, none of whom have submitted any factual
information, just marketing phrases.

Nope don't give them more room. If they don't want to be restricted to the
current Novice subbands and privileges, they can go pass the General test if
they want more space. NO FREEBIES. The General test is almost a repeat of
the Technician test. The additional material between Tech and General is
pretty minimal.

If the code "monster" is eliminated, they can get more room by upgrading to
General. Again I repeat, NO FREEBIES.

Why have subbands? Well simple, there are 600,000+ amateurs in the US.
This is more than all other nations combined (if Japan is excluded). US

voice operators could conceivably make too much noise worldwide for foreign operators. At least this way they foreign operators have a section that they can use voice while we are restricted to CW or data.

Also given the way people are very poor at following the existing band plans that overlay the mandated subbands, I wouldn't trust the 600,000+ operators to follow a mere band plan.

Those who pushed for the Tech no code license loudly and repeatedly claimed that it would lead to a major influx of technically bright hams that would lead to significant technical advances in ham radio since it was supposedly code keeping them out. Well that influx of technical types didn't happen. Unfortunately, the Technician licensees following that change are saddled with an expectation that they themselves did not create. They shoulder the burden of expectations created by those who would not have to fulfill them. Whether or not one believes in code testing, it highlights some of the inherent flaws in the argument that code keeps technical types out of ham radio.

No need to if the code is eliminated as they can easily upgrade to General with a 35 question test that is only marginally harder than the Technician test.

Your wife's love for example may have been given unconditionally but you have to work to keep it by giving love in return. That is an investment of self. If you do not love in return, a spouse's love dies. It needs nourished with love to survive.

Arnie : On the contrary, Dwight. He has claimed in one of my threads that
we are nothing more than knuckledraggers who don't understand modern
technology.

BZZZZZT! Wrong...

(1) I have never used the term "knuckledragger" at all, nor have I called
any of you guys one...
(2) I have never said that you "don't understand modern technology". All my
comments have been to the effect that the PCTA crowd has an agenda that
doesn't reflect the change in times and modernization of communications,
both of which is suppose to be reflected in the ham radio community... I
never said you didn't UNDERSTAND modern technology, I said you guys weren't
wwilling to allow the testing to "advance the hobby into the modern age."

"Clint" wrote in response to my reply ...

"the PCTA crowd just said "six mega what ???" you screwed up and mentioned
something modern and applicable in the real world.... they're trapped in
1952."

Arnie : Gee, you got us there, Clint. All of us knuckle-dragging CW'ers
are just
caught in a time warp.

"Yep. pretty much."

I disagree!

Apply that logic to some other skill or knowledge. For example, the Smith Chart. All else being equal, is a ham who knows how to use the Smith Chart to solve transmission line and impedance matching problems more experienced and more qualified than one who does not?

Or how about Ohm's Law? The phonetic alphabet? Typing skills?

>Even with that (the all being equal aspect), there is no

Sorry Dwight, you're simply off base on this one. I cannot see how you can deny that having Morse code skills makes a ham more experienced and more qualified - all else being equal.

All else being equal, having Morse skills makes a ham more experienced and more qualified than not having them. But that fact is not a proof that those skills *must* be tested.

But you won't tell us the name.
>
> On the other hand, it is difficult to figure out WHERE YOU WORK,
> in terms of an actual company name.

That's right. Because it's not relevant to an amateur radio policy discussion.
>
> You rationalize on "not revealing it" for some kind of "fear" of getting
> "bad mail" from others.
>
Nope. It's not relevant.

And, it's just common sense that no matter what job I hold/held, and no matter
who my employer(s) are/were, they would not make any difference in your
behavior towards me.

> I think your REAL fear is just in everyone discovering you don't do a
> damn thing in radio for a living.

Nope.

The only REAL fear is yours, because you desperately want to know, but I won't
tell you.
>
> No problem for me. I've revealed most of my employers in here, plus a
> number of personal references who are long-time licensed radio amateurs.

None of the employers had anything to do with amateur radio. They're irrelevant
to the discussion.

You want to knwo them for reasons that have nothing to do with amateur radio.
>
> You won't do that.
>
I've given a number of personal references who are long-time licensed radio amateurs, too, Len.

But what's really relevant is what a person has done in amateur radio. I've been an active, licensed radio amateur for almost 36 years - operating, building stations, writing articles, elmering, etc. You wrote a few basic articles for a now-defunct amateur radio periodical and have never held any class of amateur radio license.

> All you seem to want is some kind of "rep" in the newsgroup for being here
> almost all of your free time, writing terribly long, boring peans to
> yourself
> and morsemanship...when not using the newsgroup as some kind of "chat
> room" in talking about absolutely non-radio-amateur subjects.

That's not me, Len. It's you - except the ""peans to morsemanship" are "diatribes against Morse code" in your case.
>

>>
>>Ah - but that means you may have bootlegged in 1948 and before!
>
> YOU don't really KNOW if I "bootlegged" at all, do you?

Nope. But you raised the subject, not me.

I wrote (emphasis added):

"you *MAY* have bootlegged in 1948 and before!"

Maybe you did - and maybe you didn't.

I will say categorically that I have *never* bootlegged - that is, operated
illegally.

Can you say the same thing, Len?
>
> All you want to do is to selectively use my messages as an ignition
> point for a Flame War.

Nope.

Either you bootlegged before 1949 or you didn't.

Which is it?
>
> YOU didn't exist in 1948. That was 55 years ago.

Irrelevant.

Either you bootlegged before 1949 or you didn't.

Which is it?
>
> You have NO KNOWLEDGE of what I did back then or even 56 years
> ago, but you are trolling, trolling, looking for a Flame Fest to start.

Nope.

Either you bootlegged before 1949 or you didn't.

Which is it?
>
> So, great big expert radio ham, tell US your "personal experiences" with
> small output personal wireless AM broadcast band links of the pre-1950
> period.

Irrelevant.

Either you bootlegged before 1949 or you didn't.

Which is it?
>
>>Come clean and tell the group all about it. It will be good for your
>>soul to admit your checkered past.
>
> Go stick a whouff-hong someplace, pervert.
>
> It will satisfy your sex life.

Sounds like you're getting angry, Len. If you don't have a checkered past,
there's nothing to admit. Your anger *may* indicate a guilty conscience....;-)
;-)

Either you bootlegged before 1949 or you didn't.

Which is it?
>
>>It's more than you had done in RADIO at that age.
>>
>>And mine was legal. No bootlegging.
>
> YOU didn't exist in 1947...or 1948.

Doesn't matter.

What I did at 13 is much more than you had done at age 14.
>
> By February 1953 I was already (at 20 years of age) a soldier serving
> overseas, assigned to an Army radio station with the callsign ADA.
> I was with ADA for three years.

Fascinating - you were 14 in 1948 but 20 in early 1953.

> You've never served in the armed forces of the United States, much less
> "assigned overseas."

I never claimed to be. How is that relevant to amateur radio or bootlegging by
14 year olds?
>
> You've made fun of my military service in the past. [that's in Google, by
> the way, you seem to live part of your time there...]

Where? Produce the post.

I dare ya! ;-)

Shall we google up your frequent insults and denigrations of others' military
and government service?

For example - how about the way you made fun of Jeffrey Herman's Coast Gurad
shore station radio operating?
>

> You want to be honored a respected for being safely within in the USA
> borders, never serving. You want to make fun of those veterans who
> who don't love your blessed sacrament, morsemanship.

Not me. But you sure do demonstrate the principle of "can dish it out but can't
take it".
>
>>> By 1967 I'd already DESIGNED and mostly built (technician help was

Nope.
>
> Three times fourteen is forty-two.

The answer to Life, the Universe, and Everything.

1967 - 42 = 1925.

And I wrote "almost three times 14". *almost*

> I was born in 1932.

And you were 14 in 1948, huh? Talk about bad math skills!

> In early 1967 I was 34 years old, my Honorable Discharge was
> 7 years in the past.
>
>>And it was your JOB, wasn't it?
>
> You are damn right is was MY JOB.

So it is irrelevant to what *amateurs* do.

That was the essence of your diatribe against Jeffrey Herman's job.

> I was good at enough to be given design responsibility.

Me, too...
>
>>> All quite legal.
>>
>>Not for you to operate unless you held the station license.
>
> Go Whouff-Hong yourself, sweetums.

And you call *me* a "pervert"...

>>they have to memorize all those symbols, diagrams and formulas?"
>
> Those aren't "questions" except to the loaded, "do you still beat your
> wife" sort of "questions."

Not at all. The "do you still beat your wife" question is only "loaded" if the
answers are confined to "yes" and "no".

There's no such restriction on those questions.
>
> They don't have to be "answered" because YOU don't have one single
> bit of "authority" to demand answers.

Not demanding. Asking.

You don't like those questions because they demonstrate a *MAJOR* flaw in your
jeremiads against Morse code testing.
>
> Take pride in your work for a living. Reveal at least the area of
>"electrical work" you do.

I already have. Electrical engineering. Design work, to be precise. That's all
you need to know. ;-) ;-) ;-) ;-)

If that makes you angry, it's your problem, not mine.

Even that is irrelevant to an amateur radio policy discussion.
>
> Either way, ALL you are is an AMATEUR who tries to pass hisself off as
> a great big guru in AMATEURISM.

Is being an amateur somehow bad? Amateurs do things for the love of the thing alone.

You are not a radio amateur. Nor have you ever been. And that's a fact.

As for "guru", that's all in your imagination. I don't claim to be an "expert" or "guru" in anything. Not even Morse Code.

>with an expectation that they themselves did not create.

"Saddled" with what?

>They shoulder the
>burden of expectations created by those who would not have to fulfill them.

WHAT "burden of expectations?"

In the last four decades of US amateur radio the MAJOR TECHNOLOGICAL
ADVANCES in the state of the amateur radio technological art have been
made by COMMERCIAL people designing and making radios for amateur
radio.

The narrow bandpass filters that made SSB filter-method transceivers possible used basic designs intended for commercial and military radio. The Collins Radio mechanical filters were intended originally for landline-microwave radio relay equipment.

The introduction of SSB to US amateur radio was made possible largely by Collins Radio receiving a design-development contract from USAF for the Strategic Air Command. That "proved" that single-channel SSB transceivers were practical.

The frequency-control of amateur radio transceivers is due to adaptation of commercial and military designs of PLL synthesizers and, later, to designs of Direct Digital Synthesis sub-systems once microprocessors were available and low enough in cost.

You are probably too young to have experienced the very COARSE and sometimes inaccurate frequency control in transceivers of four decades ago...and the "crystal calibrators" used to spot-check "bandspread" and "main" tuning dials at 100 KHz increments...and when amateur transmitters needed individual quartz crystals to insure stability on HF bands.

The "TOR" in such RTTY/Data systems using PACTOR, AMTOR, etc. means "Teleprinter Over Radio" and was developed primarily for commercial users. The various "TORs" are the mainstay today of maritime shipping communications.

The modern computer you are using in here does (or should) reach throughput rates up to 56 KBPS in a band-limited space of just 3 KHz bandwidth (the telephone line). That wasn't invented or innovated in amateur radio by some morse code user.

Microprocessors and microcontrollers are at the heart of nearly EVERY MF-HF-VHF-UHF amateur radio receiver/transmitter/transceiver. Those can trace back to about 1973 and the first Intel microprocessor chip or the competitors appearing shortly thereafter.

The in-line, on-line antenna bridge-detector to enable automatic tuning known as the "Bruene Detector" came about from the T-192 transmitter designed and built for a USMC contract by Collins Radio...in 1955. All of the automatic antenna tuners of today can trace their ancestry directly to that practical, working implementation of 48 years ago.

Single-channel FM transceivers at VHF and higher owe much to the pioneering of Motorola done just prior to the US entry into World War 2. Both AM and FM mobile radios were pioneered by various commercial concerns and several metropolitan police departments just before WW2.

The fact that quartz crystal units became relatively cheap for amateur purchasing just after WW2 was a result of the 2nd highest priority in war production (behind the Manhattan Project) when the US total production averaged a MILLION quartz crystals a MONTH. US military contracts spurred the development of "artificial" (man-done) growth of quartz crystal blanks which came about just after WW2.

What have been the "advances" for on-off morse codings? The electronic keyer? An adaptation of already-known basic digital circuits to create the controllable dot and dash times. More "sophisticated" keyers used conventional keyboards and computer components and software to enable writing to be transmitted by on-off keying methods. Hardly an "advance in technology."

The brick-wall DSP filters touted by a few morsemen owes its existance again to military efforts and development for SONAR...and later adaption of that to telephony circuits and general communications.

>Whether or not one believes in code testing, it highlights some of the
>inherent flaws in the argument that code keeps technical types out of ham
>radio.

Those who love the PAST, the "good old days," and the simplicity of primitive technology of a century ago might be attracted to a radio service requiring a demonstrated morse code test. Morse code was first used in 1844, almost 160 years ago.

Ordinary mortals who have adapted to the new millenium are very well acquainted with men traveling to the moon and those men being televised live from a quarter million miles away walking on its surface. We are all used to global communications satellites in-use for two decades, FAX transmission of documents and images from the home (or a corner chain store at a shopping center), color television for over three decades and, for some, digital television with superb picture quality. Popular as well as
classic music through CDs has already reached epic market heights and the MPEG-based DVD has replaced the magnetic videotape. Anyone can buy a pair of FRS handheld radios at consumer stores for less than $50, absolutely no license required. Cordless phones are available now at 5 GHz carrier frequencies, something unheard-of or even expected three decades ago. One in three Americans is a cellular telephone subscriber and has the capability of dialing directly to any other direct dial telephone
in the world from anywhere within a cell site's antenna reach.

Do you REALLY expect that morse code offers a "challenge" let alone interest in emulating a century-past primitive radio communications means?!? Incredible!

>
><snip>
>
>This may be hard to quantify, Jim, but is there any data or even
>educated guessing about how many Novices are still actually active?
>
Not that I know of, Mike.

Let's look at how the three license classes that are closed to new entries have declined in numbers:

Novice is now ~67% of where it was May 14, 2000
Advanced is now ~83% of where it was May 14, 2000
Tech Plus is now ~50% of where it was May 14, 2000

Of course the Tech Plus will decline the fastest because all Tech Pluses are being renewed as Techs.

--

But if you want some interesting numbers, note that we are now down below 684,000, after peaking around 687,000. Extra and General continue to grow, and Advanced is declining slowly. What gives?

One clue is to look at the AH0A site

http://www.ah0a.org

and look at the "new licenses" numbers. For some reason, the number of new Technicians has dropped significantly in the past 2-3 months. The number of new Generals and Extras continues at the same rate as before, so it's not due to an FCC paper backup or seasonal variation.

So why the sudden dropoff in new Techs?

One definite possibility is the new Technician Q&A pool, which was introduced on July 15th. The new pool has with 511 questions, while the old one had only

384 questions.

Prior to the new pool, the average number of new Techs was about 1700 a month. Since then, it has dropped to less than 1000 per month.

Maybe this is just a temporary thing - or maybe it isn't. The code test cannot be blamed for the drop because it's not a part of the Tech license requirements.

It isn't about sharing, it's about letting unlicensed stations rule HF. This will affect other services and that is when the goo will hit the blades. FM broadcasting, for instance. AM broadcasting will likely be affected, especially those stations experimenting with digital stereo AM broadcasting. You, like so many others, seem to think it is all about the hams (gee, my washing machine is over-sudsing. Must be that ham down the street). The problem is that if BPL becomes widespread, you will have reception problems everywhere. How will the FCC ever get anyone to certify their computers, radios, televisions, copiers, and so on, when the open air test sites will *not* be able to tell if equipments meets FCC requirements due to all of that garbage everywhere. OATS sites test for radiated signals in upper HF through UHF and the whole HF range plus part of VHF will be buried in noise. Oh, I forgot. Ship all the testing to China. Makes sense.

Of course there's room for pride of accomplishment! You ought to see the walls of my shack covered with awards, the one of most proud of being "A-1 Operators Club". You ought to see the walls of my office covered with engineering and business related awards! You ought to see me beam when I come back off the lake..... well, you get the picture.

But getting back to the tone of this thread, while I highly value my amateur license for the benefits it gives me (including trying to "accomplish" things to be proud of), acquiring the license itself was a pretty modest accomplishment.

>And we've all seen your even-more-prodigious output here in this newsgroup,
>Len. Under a wide variety of AOL screen names - nocwtest, lenof21, averyfine,
>averyfineman, lenover21, and probably more.

I have never used "Avery Fine" as a screen name. "Len Of 21" is my
primary AOL screen name. Someone else has "No CW Test."

I have used NO other screen names in here.

My real name and current mailing address is the same as it appeared
many times as bylines in Ham Radio Magazine.

>Not me. I use a variety of communications modes.

Of course you do. You are a true-blue amateur who believes in all
the guidance of the ARRL and the purity and sanctity of morse code
following all directives from Newington to the letter..

>The only REAL fear is yours, because you desperately want to know, but I
>won't tell you.

What "REAL fear?" It is NOT anything about the tuff tawk in here.

:-)

Since you won't say, we just put you closer to the BOGUS boys.

>But what's really relevant is what a person has done in amateur radio. I've
>been an active, licensed radio amateur for almost 36 years - operating,
>building stations, writing articles, elmering, etc. You wrote a few basic
>articles for a now-defunct amateur radio periodical and have never held any
>class of amateur radio license.

Oooooo...! Was that supposed to "hurt" big fella? :-)

I got a COMMERCIAL Radiotelephone license in 1956 (only one test
needed) and had a career in radio-electronics design since then. You
will no doubt have to say such is "irrelevant" for lots of reasons.

You don't want to admit your occupation's firm name or what it does,
so you try to denigrate all those who aren't afraid of naming where
they worked or where they worked or what they did at work in detail.

You want to diminish the efforts of Ham Radio Magazine founders
Skip Tenney and Jim Fisk and their TWENTY TWO YEARS of
successful, INDEPENDENT newsstand publications. Why? Tenney
is a radio amateur. Fisk is deceased and his old call (W1HR) is now
used by a club in Jim Fisk's honor. You keep wanting to say HR is

"defunct" as if that is somehow unclean.

You weren't published in HR, Jimmie. You got as far as "Electric
Radio," a non-newsstand periodical for a special interest group in
old radio. Did you ever write for Electronics magazine (McGraw-Hill's
old biweekly)? I did. Did you ever write for BYTE? I did. I've written
for Microcomputing and Call-A.P.P.L.E. about more avoactional
and recreational activities concerning electronics.

>That's not me, Len. It's you - except the ""peans to morsemanship" are
>"diatribes against Morse code" in your case.

Someone has to counter your religious evangelism about morse code
and its "necessary" testing. :-)

>You're projecting your own reactions and motivations onto others. Classical
>transference behavior, really.

Nooo. The most I've been "projecting" lately are some Power Point
presentations. :-)

>"you *MAY* have bootlegged in 1948 and before!"
>
>Maybe you did - and maybe you didn't.

When did you last engage in a homosexual act?

Same sort of "question."

>I will say categorically that I have *never* bootlegged - that is, operated
>illegally.

...as far as we know...but then you will not reveal ALL that you do...

>Can you say the same thing, Len?

I can say anything I want. Whatever that is, if I don't religiously praise
morse code, you will find some fault with it and write yards and yards
of copy manufacturing all sorts of nonsensical "arguments."

>> All you want to do is to selectively use my messages as an ignition
>> point for a Flame War.
>
>Nope.

Incorrect.

>> YOU didn't exist in 1948. That was 55 years ago.
>
>Irrelevant.

Anything before your birthdate is "irrelevant?" A very elitist, arrogant
attidude. Tsk, tsk...

>Sounds like you're getting angry, Len. If you don't have a checkered past,
>there's nothing to admit. Your anger *may* indicate a guilty

>conscience....;-)

I once took a Checker cab. I've played checkers. I've watched many a
checkered flag wave at the end of NASCAR and CART races.

>What I did at 13 is much more than you had done at age 14.

You MUST say that anything you've done at anyone else's same age
is "better." :-)

Did you win any International contest awards at 14? :-)

>> By February 1953 I was already (at 20 years of age) a soldier serving
>> overseas, assigned to an Army radio station with the callsign ADA.
>> I was with ADA for three years.
>
>Fascinating - you were 14 in 1948 but 20 in early 1953.

15 in early 1948. Between 20 and 21 in 1953 depending on month.

Why are you so concerned about minutae in years?

Looking for another TROLL opening for more FLAMING? Of course...

>> You've never served in the armed forces of the United States, much less
>> "assigned overseas."
>
>I never claimed to be. How is that relevant to amateur radio or bootlegging
>by 14 year olds?

You are the one featuring BOOTLEGGING, Jimmie. That's a main
subject with you? Why?

>> You've made fun of my military service in the past. [that's in Google, by
>> the way, you seem to live part of your time there...]
>
>Where? Produce the post.

I was posted to 8235th AU in 1953 and stayed there for 3 years as one of
the many who worked ADA, the primary communicaations station for the
Far East Command. 24/7 service via HF.

You've not done anything close to that.

>For example - how about the way you made fun of Jeffrey Herman's Coast Gurad
>shore station radio operating?

You civilians will never understand that former military persons can joke
about their military branches because we all KNOW what military life was
like. You CANNOT.

The USCG has NEVER done HF communications in any magnitude
approaching either the US Army, US Air Force, or US Navy. That's a fact.

>> You want to be honored a respected for being safely within in the USA
>> borders, never serving. You want to make fun of those veterans who

>> who don't love your blessed sacrament, morsemanship.
>
>Not me. But you sure do demonstrate the principle of "can dish it out but
>can't take it".

No problem. You want to throw food in a food fight here, go ahead.

If I care to do so, I can toss it right back at you with increased tonnage
and far better delivery.

Go to someone else to attempt a flame war.

>The answer to Life, the Universe, and Everything.
>
>1967 - 42 = 1925.

IRRELEVANT.

Only a few are interested in a dead, DEFUNCT, British fantasy
novelist who was a darling of a few eastern anglophiles. Sorry, but
it was all a flash in the pan, then goodbye. Don't try to pass that off
as "science-fiction," it will never play at the SFWA.

>Is being an amateur somehow bad? Amateurs do things for the love of the thing
>alone.

And a few of you insist your amateurism is "better" than anything the
professionals could ever do.

>You are not a radio amateur. Nor have you ever been. And that's a fact.

I've been a PROFESSIONAL in the electronics industry. That's a fact.

I've been a hobbyist in electronics. That's a fact.

I've done military communicaations for three years a half century ago.
That's a fact.

I've done commercial communications as a civilian. That's a fact.

You have NOT done any of the above and that's a fact.

I don't venerate or worship or glorify morse code. That's a fact.

I don't fantasize or pretend that any amateur "needs" an out-dated
skill in any radio just to get a license to operate. That's a fact.

I'm willing to state anything I've done, barring NDAs or national
security subjects and that's a fact.

You are unwilling to state anything in any detail of what you have
done in radio or electronics for a living and that's a fact.

You try to amplify minutae into gigantic "arguments" over nothing
and that's a fact.

When you act civil and rational, then I might discuss things with you.

That's not a fact because it hasn't happened yet.

Now fire up your Time Machine and go back to the Past in radio that
you love so much.

Bye....

It might have if it was promoted better. The argument of people running to the internet, or the internet being competition is not as strong of an argument (among other arguments). You can't "run" to something if you didn't know it existed in the first place. Let's see, how many people have heard of the internet?? How many have heard of ham radio??? How many of these answeree's are under 25-30??

Our local group just did a presentation/booth for the boy scouts this past week, and only about 5-10% had a clue that ham radio even existed.

In the 60's and early 70's, CB was only a minor nuisance, mainly a concern only for the FCC. Most Americans had never even heard of it. By the end of the 70's, the number of CB'ers had increased dramatically and problems (and complaints) were widespread. The only significant thing that happened during that time, to cause such growth, was the Hollywood movies (and television shows) featuring CB. And you could clearly see that influence. By the late 70's, the very first channel most people turned to when they got their new CB home was channel 19 (the truckers' channel). That fact drove truckers crazy. And the only way most people even knew of that channel was those Hollywood movies.

> But ham radio did not have that "outlaw" mentality.

Really? I thought that was pretty obvious. We were talking about "what if," not "what is."

> And, back then, such activities would have brought down
> tremendous peer opposition by the rest of the ham
> community. (snip)

You put way too much faith in peer pressure, Jim. Peer pressure would not control thirty to fifty million people (the estimates of CB'ers by the late 70's) if they had decided to ignore the rules.

> Yet in my experience there has been a longstanding problem
> with the cb "outlaw" culture trying to migrate to amateur radio.
> In this area, at least, we have had serious problems on VHF/
> UHF repeaters from newcomers who saw 2 meters as a
> noise-free version of cb.

I've traveled to almost a dozen states in the last five years and such behavior is extremely rare on all of the repeaters I've monitored or used. Instead, I've mostly heard polite, friendly, people who seemed to be very serious about their ham radio involvement. Where problems did exist, it was usually blown out of porportion by guys angry about others using "their" repeater for things they didn't like. In one situation, I even heard several guys antagonizing two guys so they could record the results, which they said was going to be sent to the FCC (minus their part in it, I'm sure). The two guys were not doing anything wrong before those guys showed up on that

frequency. Because of my experiences, I always wonder about the cause whenever I hear people talking about a "problem" on a local repeater.

Just two examples, Jim (that's obviously why I said "and so on"). There were a rash of movies and television shows featuring CB in the mid to late 70's - BJ and the Bear, Dukes of Hazard, Moonshine, Knight Rider, and so on. Even regular television shows (Charley's Angels, Magnum PI, Love Boat, CHiPs, and so on) had episodes featuring CB.

My reply was directly in response to Jim's question about "100%
built-from-scratch amateur radio receivers, transmitters, transceivers,
antennas, power supplies, etc." I responded by talking about building "a
radio today." Does any of that clear up what I might have been addressing?

What assertions, Bert? This is a newsgroup discussion, not a courtroom.

> Amateur radio is all we're talking about, Dwight.

For the reasons already stated several times, code testing cannot be discussed solely within the context of its use within the Amateur Radio Service. The FCC doesn't view it that way, therefore we cannot do so either.

> (snip) Instead it's morphed into an "international" movement,
> the result of which will devalue AR as a whole. (snip)

Nonsense. The entire rest of the radio world is moving, or has moved, away from code/CW. If anything, our continued focus on that as a primary element of this Service is what has devalued (and is devaluing) Amateur Radio.

> I know I'd NEVER snub a licensed ARO OTA...but it'd be

Is that some kind of veiled threat, Bert? If so, feel free to snub me all you want. Someone who would treat another person as unwelcomed over something as petty as the code testing issue is not someone I would want to talk to anyway.

> Try QRP, Dwight. You'll love it. Some of the newer antennas

You don't know what my situation is, Bert. I have considered the options available and find none of them to be very useful. An external antenna, not matter how small, is out of the question. The same with alternative antennas (hidden and so on). Because of the building materials used, an internal antenna is ineffective. The same with increased power output. I am not aware of any solution that would be effective in my situation (other than moving, which is also out of the question at the moment).

In article <39BC0266.81B91591@ovis.net>, Sig Heil <K8MN@ovis.net> writes:

>You remain a bitter and ancient child.

Now, now, you are looking into the mirror again when you write. :-)

>It is now quite obvious that you
>have no intention of ever obtaining an amateur radio license exam.

That is YOUR suppository, er, supposition, Herr Standartenfuhrer.

>Why do you continue to post these lengthy diatribes having nothing to do
>with amateur radio?

On the contrary, YOUR lengthy diatribes address nothing but an attempt to suppress dissent and to "get even" with being taken to task two years ago on your braggadoccio of radio expertise. You've never forgotten and want vindication. You get none. This makes you whiney and petulant. Poor baby.

The restructuring in amateur radio is not yet complete. More needs to be done to bring US amateur radio regulations closer to 1980s standards (it had been at 1950s standards, more or less). You and a few others who achieved their "qualifications"

(!) from high-rate code and 1-by-2 or 2-by-1 callsigns cannot take the new rules and insist that all be "qualified" under the old ones or you will not "recognize them."

Those who do not accept YOUR definition are objects of your highly-negative, follow-the-law-as-it-is-NOW criticsm.

Just the same, in other threads on other subjects, Herr Heil hasn't spoken out on any technical subjects that can affect policy of now or even later...except to go on at length on a non-relationship of surname Heil in regards to microphones.

[for shame! 'real' hams don't bark into microphones! :-)]

>Have you nothing else in your life?

Considerably more, four-neuroned-brain Heil. The attitudes of national socialist partei one-by-twos who think they are wielding two-by-fours of arrogant superiority make the prospect of "proper" and "right" licensing unattractive to be placed at the top of any agenda. YOU are in such a category by public observation of anyone accessing this newsgroup.

Perhaps your many years of public service at the State Department have made you oblivious to the fact that the FCC (that's another government agency that regulates civil radio in the USA) sets licensing standards for US radio amateurs. It also grants licenses. It granted yours (apparently). The US amateur radio community does not grant licenses...nor does it "rule" on the "motivations" it thinks citizens have in regards to radio licenses. You seem to think that you "know" everything about those who post contrary opinions to yours. Have fun in your self-important ignorance, go ahead and post more of your "hate" allegations as if you represent the entire US ARS community. I don't care to message with you further (as if I ever did to your libelous postings), Herr Standartenfuhrer. I'm going to a college reunion. QRT.

Those are all skills or knowledge that can be used by every ham radio operator. Not so with Morse Code.

> You think that skills do not transfer in any way? I disagree!

I think code skill does not transfer to "more experienced" or "more qualified" when discussing a ham radio operator instead of code alone.

> Sorry Dwight, you're simply off base on this one. I cannot see
> how you can deny that having Morse code skills makes a ham
> more experienced and more qualified - all else being equal.

More experienced and more qualified in what, Jim? Morse Code only, not as a ham operator. With the Technician license, the FCC has already established that Morse Code is not a qualification needed to be a ham radio operator. Therefore, Morse Code cannot be used when deciding who is "more experienced" or "more qualified" as a ham radio operator.

It didn't? I have a Tech license and consider myself fairly well informed when it comes to technology. I don't know how bright I am, or if my involvement will ever lead to "significant technical advances in ham radio," but at least I'm here. Am I the only one? I'd surely hate to shoulder this burdon alone.

Aren't you being a little unrealistic, Dee? Did you really expect this group to offer up "significant technical advances" in a mature radio environment? For that matter, did you really expect this one group to offer anything more than the other license holders today? Radio is in the evolution stage at this point, not the revolution stage. Changes will come, but they're certainly not likely to be earth shattering changes.

The Apple DOS 3.3 disk (early 1980's) came with a simple program, included as a programming example, that did a fine job of copying code/CW. I hooked an unused Apple II Plus to a Kenwood R2000 shortwave receiver and used that program to copy code for several months. It rarely missed characters and almost never missed enough characters to make the message unreadable. The only times that program failed was when the signal I was trying to copy was too deeply buried in the background noise or when multiple stations were transmitting on the same frequency.

I haven't purchased a program like that recently, but surely they've gotten better over the years. Is that not the case?

The same argument can be used for Smith charts since Techs are not required
to learn that either. Morse code is a skill used in amateur radio so
someone who knows it is a more qualified operator than someone who doesn't
whether or not it is a required skill. Just as knowing how to use a Smith

chart makes one more qualified.

I personally do not have such an expectation nor is it a comment on any individual Technician licensee. Most of the Techs I know are indeed quite bright and well informed on technology. I was merely pointing out why some people seem to put so much pressure on Technicians, i.e. the proponents of the change "sold it" by using the "big influx of technologically oriented new hams and signficant technical advances" as one of the key elements of their argument. That argument was invalid then and is equally invalid now.

In my opinion, almost every argument posed on both sides (for or against code testing) has major flaws and is invalid.

Personally I consider basic code one of the fundamentals of radio even if one chooses not to use it after learning it. As a basic, I believe it should be tested. That is the position I will continue to support. And I will continue to promote code use whether the code testing is dropped or

not.

No they haven't. The two conditions you state are still problems and good
reasons to learn to copy by ear. The human brain can sort it out when the
computer cannot. Poorly sent and spaced code is also still a problem.

I have put forth no theory that Bruce is a master of anything, nor that he is

brilliant.

All I've done is to demonstrate that it is possible to skim through an Extra Class practice exam in less than 8 minutes and pass. And I've said that it's possible that someone's lack of correct spelling, grammar, and logic can be an act.

Philosophically, Bruce and Len are identical. Their methods are slightly different but they are both just simple basher/insulters of those who dare to disagree with them.

Neither has anyhting constructive to contribute.

All else being equal, having a skill related to amateur radio means the person with the skill is more experienced than someone who doesn't. (Note that "all else being equal" thing).

>> Sorry Dwight, you're simply off base on this one. I cannot see
>> how you can deny that having Morse code skills makes a ham
>> more experienced and more qualified - all else being equal.
>
> More experienced and more qualified in what, Jim?

In amateur radio communications.

>Morse Code only, not as a ham operator.

No, as a ham operator. Morse Code is a big part of amateur radio. (So are many other things which do not have their own, standalone test for a license).

>With the Technician license, the FCC has already established
>that Morse Code is not a qualification needed to be a ham radio operator.

More precisely, they have said that a Morse Code *test* is not absolutely necessary in order to be granted a license.

But I'm not talking about the *test*, but about relative levels of experience and qualification.

>Therefore, Morse Code cannot be used when deciding who is "more >experienced"
>or "more qualified" as a ham radio operator.
>
By that logic, nothing that isn't on the Technician written test can be used to determine who is "more experienced" or "more qualified" as a ham radio operator. Faulty logic.

For example, the Tech test does not require that an amateur actually operate an amateur radio station at all. So, by the logic you use against the Morse Code experience/qualification thing, an amateur who has spent many years operating a wide variety of modes, bands, and on-air activities (public service, contests, rag chews, satellites, etc.,) cannot be said to be "more experienced" or "more qualified" as a ham radio operator, because the Tech test doesn't require any actual operating.

The inescapable, logical conclusion that results is this: Having Morse code skills makes a ham more experienced and more qualified as an amateur radio operator - all else being equal.

Of course that plain simple fact doesn't prove that there must be a code test as a condition of granting a license.

> fell short in substantially the same way.

LRod, Lee's made these same inaccurate statements before, when he used the word "too" for what should've been "two." It is a part of a post in which he was replying to two different posters, but he must've been on one of his drinking binges that day, so he didn't notice. He quickly made apologies and excuses for it citing the same online sources as he did above:

IGNORAMUS "Stagger Lee" <SLee@houston-hunks.com> demonstrated
his English skills and later tried to backpedal out of his use of "too" instead of "two"
in message <too.two_or_also@houston-hunks.com>:
"You too need to get a newsreader which generates a References header."

Here's another one where he falls flat on his sloped foreheaded face:
Stagger Lee, the "Pulitzer prize award-winning writer" slobbered
the following Ebonics in <9a56ue$hi0$0@dosa.alt.net>:
"I hope yourself takes the advice you are giving to yourself."

Or, alternatively, they are upgrading to General and Extra since they
already have 5 wpm code credit. There's been a lot of that.
(As an "old" techplus with full general written credit and 5 wpm
credit, I simply had to take the extra written to upgrade all the way.
I'm sure there were lots of similarly situated folks who also upgraded,
either as a "paper upgrade", with no test, to general, of as I did by
taking the extra written.)

Perhaps the dropoff is merely due to the coincidence of the new pool going into effect when people are busy with summer/outdoor activities. It might pick up again in the winter months.

Perhaps we had a sudden blip of people rushing to get their licenses in the few months preceding the change. I know several people who would have waited another month or so if the pool hadn't changed. They all hurried up

to get their tests taken before the end of June. So how many months does that 1700 per month cover?

OO's are trained in documentation. Documentation of interference will
be required to file a complaint. OO's are confined to documenting
amateur's violations in the ARS, not interference to the ARS by
unlicensed operators.

Thus, I state that perhaps the ARRL will take an outward looking
stance with respect to this interference.

Of course.

But my point was that the TV shows and movies were a result of the cb
boom, and reflected its outlaw nature. They did not cause the boom,
nor the culture, which were solidly in place in the late 1960s.

>
I'm sure they did. Note that most of the above are TV shows, and their dates are all fall premiere dates.

cb and its culture were already well established long before the movies and TV shows caught on. Heck, First Lady Betty Ford ("First Mama") had one in a White House limo. (The Ford Administration ended in January 1977).

The restrictive rules on "external and internal RF power amplifiers" (also called "linyars") were enacted by FCC in 1978. That was long after they were all over the place. Given typical bureaucratic delay, that means amplifiers were a big problem at least two years earlier - 1976.

Things did not go bad because of the movies and TV shows. They went bad because there was no way FCC could enforce the rules, and no established culture or tradition of self-discipline, responsibility or rule-following.

Art imitates life.

The song "Convoy" was a hit in 1976. "C.W. McCall" is/was a persona created by one Bill Fries, starting out as a series of commercials.

True fact: The 'band' that backed up "McCall" (actually a rotating bunch of studio musicians) was organized by Chip Davis, who is probably better known for his involvement in the New Age "Mannheim Steamroller" music.

To really get a handle (pun intended) on when the boom peaked, look up when FCC gave up on licenses for cb.

And therin lies the problem.

These OF's expect that the newbie will study a Q/A guide, pass a test,
and somehow end up with 20, 30, 40 or even 50 years of experience
under their belts - just like they did(?) back in '06.

That's not how it works.

Where did you dig up that gem of mis-information? You really must be
on some chemical --- perhaps your diet Pepsi has been spiked.

I have simply pointed out that the path to an amateur license is not
(and never has been) particularly strenuous, and in most cases is a
pretty modest accomplishment. It's what happens AFTER you qualify for
a license which counts.

For information on how I feel about current license qualifications,
see my comments to the FCC. Go to http://home.earthlink.net/~k0hb and
click on the link (left of page) "FCC Comments".

That makes sense - we have the same program running up here.

Assuming that happens, I'd expect that plenty of us will be required
to augment the work that the OO's do in this regard. I have not seen
a statistic on the number of active OO's in the program - I'd assume
it to be relatively small, though.

I wonder how many of the 'enlightned' know what the Technician license was
ORIGINALLY
intended for?

I'll help you out....it wasn't an 'entry level' license.

Come on all you old timers. Straighten out the enlightned out there.

They HAVE, but there's no market for such things, not even with the Military Intelligence School at Fort Huachuca on ELINT training.

>The two conditions you state are still problems and good
>reasons to learn to copy by ear.

Which is NO reason to mandate code testing for an AMATEUR radio license by the government.

>The human brain can sort it out when the
>computer cannot.

Then all the other radio services "should" have used it for communications, right?

Wrong. All the other radio services involved in communications have either DROPPED it or never considered it in the first place.

>Poorly sent and spaced code is also still a problem.

So?

US radio amateurs who do NOT use morse code modes (the majority) don't require morsemanship skills.

They have, but the mighty morsemen consider such to be desecrations
of the will of the old radio gods.

Perhaps you missed a back-and-forth I had in here with Ed Hare on a
programmer acquaintence who wrote an adaptive morse code cognition
program (on a standard PC, top of the line then, middle-level now) which
could compensate very well for variations in spacing, dot-dash lengths,
whatever "swing" is (a subjective term to morsemen), tone, rate, and
so forth. To him it was an intellectual challenge.

Some trials with my receiver and a long-wire antenna at his place
showed that there was damn little USE of morse code anywhere on HF
except in the amateur bands. There's no real market for such a thing
and the successful adaptive morse code cognition program remained
just a satisfying (to the programmer) intellectual exercise.

>Yes, you have. Here's just one example - there are more.

I stand corrected. Three and a half years ago AOL still had a limit on
the number of characters in a screen name.

Once that limit was changed to a longer string, I cancelled the "Avery
Fine" screen name and changed it to my old Sysop handle of "Avery
Fineman" used many years ago before the Internet went public. LATER,
someone picked up on that particular screen name of "Avery Fine" and
used it as soon as the six-month time was up. The same is true of
"No CW Test" screenname...which I cancelled and someone else used
after it was available.

At NO time have I ever tried to disguise my legal name or address or
location by adopting some false personna.

Yet you GRASP AT STRAWS in trying to light up a Flame War to
satisfy your childish pique in here. Tsk, tsk, don't play with matches...
there are others here who have flamethrowers and you could get
severely burned.

>>(apparently). The US amateur radio community does not

"CHiPs" featured fake motorcycle and patrol car communications using California Highway Patrol protocol and radio equipment dummies on supposed CHP frequencies. Some of the audio of actual CHP radio communications was recorded and "wild-tracked" into an episode as needed.

It's "highway scenes" were shot on the Foothill Freeway under construction in the Sunland-Tujunga-La-Crescenta area just to my residence's north.

>I'm sure they did. Note that most of the above are TV shows, and their
>dates are all fall premiere dates.

You have a dispute with the entertainment industry and television in general? Take it up with the Academy of Television Arts and Sciences. Their headquarters is in North Hollywood...very nice building. Nice folks in there...but watch out on dissing them or you might wind up head-first in one of the fountains in the courtyard.

>cb and its culture were already well established long before the
>movies and TV shows caught on.

"Outlaw culture?" :-)

"Desperados of the Wild West?" Are you imagining yourself as some
kind of "marshall" out to "avenge" things? :-)

>The restrictive rules on "external and internal RF power amplifiers"
>(also called "linyars") were enacted by FCC in 1978. That was long
>after they were all over the place. Given typical bureaucratic delay,
>that means amplifiers were a big problem at least two years earlier -
>1976.

Okay, here it is 27 years later. Where are all the avenging marshalls
and sheriffs and fast-draw lawmen setting up law and order in the wild
EM west?

>Things did not go bad because of the movies and TV shows. They went
>bad because there was no way FCC could enforce the rules, and no
>established culture or tradition of self-discipline, responsibility or
>rule-following.

Yes, pity that...no one to "establish culture or tradition or
self-discipline"
like all the mighty macho morsemen did LONG before Sheriff Jimmie
was born. :-)

Sheriff Jimmie, hop up on your hearse and form up a posse to ride out
into the wild EM west and arrest those miscreants!

Make yourself look proud in the eyes of other macho morsemen!

SO, WHERE ARE ALL THE MOVIES AND TV SHOWS FEATURING
AMATEUR RADIO...AND ESPECIALLY MORSE CODE?

AMATEUR RADIO AND THE ARRL HAVE HAD LONGER THAN 27
YEARS TO MAKE AN IMPACT ON THE PUBLIC THROUGH THE
ENTERTAINMENT MEDIA.

Got yer ears on? :-)

Why are you so focussed on a common graphical tool used by RF
PROFESSIONALS?

A Smith Chart is no damn good if you don't understand complex
number quantities.

Oh, I get it. The US amateur test regulations should all be about
satisfying the "disabled." Understand.

>How can an amateur who cannot speak use the phonetic alphabet?

Q: How can an amateur who cannot think talk about radio regulations?

A: Go into this newsgroup and blather about the importance of code!

:-)

>All else being equal, having a skill related to amateur radio means the person
>with the skill is more experienced than someone who doesn't. (Note that "all
>else being equal" thing).

"All else being equal" does not apply. That is pre-loading your
supposition.

>>> Sorry Dwight, you're simply off base on this one. I cannot see
>>> how you can deny that having Morse code skills makes a ham
>>> more experienced and more qualified - all else being equal.
>>

>> More experienced and more qualified in what, Jim?

Ah, you think amateur radio is ALL about morsemanship!

>>Morse Code only, not as a ham operator.
>
>No, as a ham operator. Morse Code is a big part of amateur radio. (So are many
>other things which do not have their own, standalone test for a license).

Morse code is NOT the biggest part of amateur radio.

>>With the Technician license, the FCC has already established
>>that Morse Code is not a qualification needed to be a ham radio operator.
>
>More precisely, they have said that a Morse Code *test* is not absolutely
>necessary in order to be granted a license.

Yes they did, 13 years ago and again 5 years ago.

The FCC is the ONLY agency which grants US amateur radio
licenses. The "amateur community" doesn't grant them.

>But I'm not talking about the *test*, but about relative levels of experience
>and qualification.

...which you have absolutely pre-loaded to favor your own personal
desires and abilities. Not valid for establishing regulations that
apply to ALL Americans.

>By that logic, nothing that isn't on the Technician written test can be used
to
>determine who is "more experienced" or "more qualified" as a ham radio
>operator. Faulty logic.

It's only "faulty logic" to morsemen.

>For example, the Tech test does not require that an amateur actually operate
an
>amateur radio station at all.

Neither does the General or Amateur Extra, nor did the Novice or Advanced
classes. Tsk, tsk, tsk.

>So, by the logic you use against the Morse Code
>experience/qualification thing, an amateur who has spent many years operating
a
>wide variety of modes, bands, and on-air activities (public service, contests,
>rag chews, satellites, etc.,) cannot be said to be "more experienced" or
"more
>qualified" as a ham radio operator, because the Tech test doesn't require any
>actual operating.

Yes, yes, yes, mighty macho morseman...you are the "most experienced"
of all, especially using satellites to rag-chew on "CW."

We KNOW that you set yourself and morsemanship as the very model of
a modern macho morseman.

>The inescapable, logical conclusion that results is this: Having Morse code
>skills makes a ham more experienced and more qualified as an amateur radio
>operator - all else being equal.

That is inescapably ILLOGICAL. There is NO "all else being equal" situation
in the US amateur radio license test regulations that make it "logical" to
prove any morsemanship ability. That is just your personal viewpoint.

>Of course that plain simple fact doesn't prove that there must be a code test
>as a condition of granting a license.

The only "plain simple fact" proven was that you are a morseman and are
trying to force all future US radio amateurs to test for morse code
regardless
of its validity in determining licensing to the FCC.

Quite reasonable ideas - but looking back on previous summers, there
was no corresponding dip. And it's still dropping.
>
> Perhaps we had a sudden blip of people rushing to get their licenses in the
> few months preceding the change. I know several people who would have
> waited another month or so if the pool hadn't changed. They all hurried up

Again, quite reasonable, but the end result is a net loss over a year
or more ago.

And the other license classes are almost unaffected.

> So how many months does
> that 1700 per month cover?
>
12

But don't take my word for it. See for yourself:

http://www.ah0a.org

click on "US amateur license statistics" (or words to that effect)

then

"New Licenses"

and see the whole picture, going back several years.

Consider this:

Suppose the new Q&A pool really is the cause of this dropoff. Will we
see folks arguing that the writtens are stifling growth, turning
people away, etc.?
Will we see a movement to reduce (again) the level of written testing,
the number of licenses, etc.?

Exactly!

So the argument "the military does/does not use Morse" has no bearing
at all on the issue of an amateur radio code test.

Glad we're agreed on that.

73 & good luck against BPL

Where are all the movies and television shows featuring normal
families with normal marriages and normal children? Where are all the
movies and television shows featuring normal employees working for
normal employers? Normal is boring. Conflict is exciting.

American culture considers CB radio to be used mostly for evading
speed-traps. This illustrates a basic conflict (man versus society)
which is featured in forms of entertainment predating the Trojan war,
let alone CB radio. This particular conflict also appeals to the
American mind-set of bending the rules and avoiding punishment.

Amateur radio is used for extending the state of the art, for
expressing international goodwill, and for emergency communications.
The first two make for bad theater, but the last has potential.

Movies and television shows have been created around this type of
topic for quite some time, with man versus nature being the most
relevant conflict in this case. Amateur radio is usually only used
when normal communications systems are unavailable. This doesn't
exactly happen on a weekly basis, so it'd be difficult to make a
television show based on this scenario. As for a movie, well,
the potential is there, but I haven't seen it used effectively. It
was a gimmick in _Frequency_ but personally I'd rather see something
like the story of the operators lost from Mount St. Helens, or maybe a
disaster flick covering The Big One out here in California.

Oh, yeah, Morse code. I got a kick out of the satellite scenes in
_Enemy of the State_. Dahdidahdit dahdadidah.

Jack.

You might want to take a look at the NCI and NCVEC petitions, for a
start on who is claiming what.

> Skill in Morse Code is certainly not unique in that ability, Jim.

Actually, it is unique in that ability. What other mode permits a
skilled operator to extract so much on-air performance from such
simple equipment?

Last night I worked a ham in Mississippi on 40 CW. He was running a
homebrew 3 watt QRP transceiver of his own design and a simple wire
antenna. I was running my homebrew 100 watt Southgate Type 7
transceiver and inverted V. Good solid QSO, homebrew-to-homebrew. How
often does that happen on any other mode? How much performance would
you expect from a simple homebrew SSB transceiver of the same
complexity?

> In fact, almost any knowledge of radio would allow that.

What homebrew rig would you recommend to a newcomer with no
experience, few resources, but a great desire to learn?
>

> With almost every commercial radio today equipped to transmit code, why

> would that be true?

It's true because there are folks who actually want to build radios with their own hands and heads, rather than buy them ready-made. Kinda like home-cooking, even though there are restaurants all over, and packaged foods of every description in the supermarkets.

Plus there's money to be saved. My current homebrew rig cost me less than $100 to build. How much of a used rig HF rig can you buy for under $100?

> Few today, even those with an interest in code, are
> building their own equipment. Instead, most are using the same type of
> equipment I've purchased.

And that's sad. In fact, it's a real problem for a service that FCC calls "fundamentally technical".

How can we say we're a "technical" radio service if we don't even design, build, repair or maintain our radios?

What does it matter if a ham knows how the DDS synthesizer in his Ikensu box works if, at the first sign of trouble, he packs it up and sends it to a service facility without even trying to fix it?
>

> How many 13 year old kids today, with or without a ham license, with or
> without code skills, are building their own radio equipment today?

I don't know - but there are some. One reason there aren't more is because of the de-emphasis of HF and CW as a starting point in the ARS.

You think an average motivated 13 year old couldn't build a simple CW rig today, put it on the air and make lots of contacts with it?
>

That was one of the prime arguments for dropping the code test for Tech back in 1990, and it's one of the prime arguments for dropping it altogether today. You want me to quote chapter and verse from some petitions?

> Instead, I thought they were just supposed to
> participate in the same activities most other Amateur Radio operators are
> participating in. Why the unique expectation for Technician license holders
> alone?

Because there were *allegedly* all sorts of "technically qualified"
and "cutting edge" folks out there just itching to get a ham license
and usher in a brave new world of ham radio - except they were stopped
by the code test. Either they weren't interested in code or they
didn't have the time, or they refused to "jump through the code test
hoop".

So the code test was dropped and.....there was no revolution.

> > Instead, the continued progress in amateur technical efforts

>
> Which "amateur technical efforts" are you referring to, Jim? I must have
> missed something because I haven't seen much technical efforts from ANY of
> the operators I've met over the last few years, regardless of license class.

How about these:

- 24 GHz EME QSOs with small dishes and less than 100W
- APRS
- PSK-31 and other TOR modes
- WSJT and other software decoders
- SO2R software and hardware
- the Tayloe (N7VE) mixer

The last is my personal favorite. Ham thinks up a new use for an
interesting chip. Designs and builds a really high performance low
current drain direct-conversion HF transceiver around his idea to
verify the performance. Amazing results. Rig is simple enough for most
hams with a little soldering skill to replicate. Might even be a
patent involved in the thing.

What mode did he build his transceiver for? CW.

There was supposed to be a kit marketed, but AFAIK that hasn't
happened. No matter - there's enough info on the website (Red Hot
Radio) to build one from scratch.

Just think - a ham can build an honest-to-goodness rig (not a lab
experiment, not a curiousity) that will work lots of other hams. And
it has high-priced-rig performance for a tiny fraction of the price of
any store-bought set.

But you have to know Morse to be able to use the thing.

==========

It must not be forgotten the health of French nation has considerable improved since August. The undoubted evidence for this is a much reduced death rate amongst the elderly which will last for several years.

The same sort of statistics apply to other countries which suffered from the heatwave but didn't bother to publish them, ie., for political reasons they kept it secret.

The French government should be congratulated on its honesty as it should be on other matters of international interest and importance.

Vive la France ! Vive l'Europe !

> You're a rabid troll???

from http://bboard.scifi.com/bboard/browse.cgi/1/5/984/8099 :

troll v.,n. 1. To utter a posting on Usenet designed to
attract predictable responses or flames; or, the post itself.
Derives from the phrase "trolling for newbies" which in turn
comes from mainstream "trolling", a style of fishing in
which one trails bait through a likely spot hoping for a
bite. The well-constructed troll is a post that induces lots
of newbies and flamers to make themselves look even more
clueless than they already do, while subtly conveying to the
more savvy and experienced that it is in fact a
deliberate troll.

Sadly, no, I'm not a "troll". I wish the BPL issue was
frivolous,or that newbies were the only people I was trying
to reach. I meant what I said, albeit in an "over the top"
style, but my email was intended to wake people up and
generate intense debate, not to "troll for newbies".

This issue has hit me harder than anything
that's ever happended in ham radio, and all the more so
because I'm nearing retirement and have been putting
together an S-Line to enjoy when I have time. The ARRL
reports about how BPL wipes out HF have made me as mad
as hell, and I'm trying to convince other hams not to
take it anymore.

I admit my boss' antics have coloured my view of
the Republic party, but I think my opinion is
accurate, and that it reflects the viewpoint of
Mr. Powell and the other commissionars: that
anyone with a couple of million to throw around
can get whatever they want while George Bush Jr.
is still in power.

Criticize the message if you want - that's why
I put it out there - but please don't shoot the
messenger.

James Penn

My job is like that. The building is really well shielded and I wanted to run an inconspicuous 30/40m SW+ QRP rig from my desk.

To a very small degree. Ask KT4ST - he's been there, done that.

This is true. Ben there, done that. Although Len likes to say that I work as a "local" Emergency Manager, the fact is that I am the Director of Emergency Management for two of the largest Military Installations east of the Mississippi. We serve a very large population and coordinate closely with multiple county EMA Directors. With that background in mind, we *do* use CW to some degree when conditions warrant. For example, in 1999 (for Hurricane Floyd) CW was used to communicate on HF when the conditions were too poor to use SSB. Once the conditions improved we went back to voice, which is always our primary mode. This is one of the reasons that I say every Ham should have a basic skill in CW. It just adds to their versatility in emergency communications.

Dwight:

Incorrect. The Technician class license infers that knowledge of Morse code isn't required to be an *entry-level* amateur radio operator. There are two higher classes which require a code test.

>Therefore, Morse Code cannot be used when deciding who is "more experienced"
>or "more qualified" as a ham radio operator.

Of course it can, since becoming a General- or Extra-class ham still requires a code test, and always has.

If and when the Element 1(a) code test is abolished, that will simply prove that the FCC has a low opinion of the ARS as a whole, and that it responds to political pressure -- i.e. petitions to remove code testing, and the comments
which support them.

You prove my point, Jim! A person that might be going to take the
Technician test, might just think to wait so that they can get HF
priveliges right after their first test. Rather than take two tests,
they gamble that the Morse test will go away, then they only have to
take one test, one charge.

That is what I would do under the circumstances.

At least among people who regularly post in here, the villans will be
the Pro coders are scaring potential hams away.

Here is another possibility. Now that the sunspot cycle is winding
down, the bands will get a lot quieter. Some who get their license may
wonder just what the big deal about the ARS is. They may not be a good
advertisement for Ham radio. There are some years coming that most of
the activity will be on 40 and up, and unless a person is using a
narrowband mode, they may not do a lot of communications on HF.

I am inclined to say there will be a push to reduce requirements if that happens. At the moment, every issue seems to gravitate towards Morse CW requirement. This question needs revisited after the requirement is dropped, if it is dropped.

And my opinion is no, we shouldn't reduce the requirements.

That CB became well know in the later 70's is not in doubt, but since my job in the early 70's required me to travel on the highways a lot, I can ensure you that it had the "outlaw persona" even at that time. Over the road, the Tuckers sounded very much like they do today, and the boys running their linears were so very much like they are now. The biggest difference was they used a different channel than 19. Know what it was?

So why the fixation on controlled substance? You find something that
interested you and now you're trying a transfer?

Your meaning wasn't the least bit obscure, however you spin it
after the fact. What you said means the same as "hard earned dollars
spend just the same as the easy".

Did you never hear the term "Easy come, easy go"? It sure applies here.

> I have simply pointed out that the path to an amateur license is not
> (and never has been) particularly strenuous, and in most cases is a
> pretty modest accomplishment.

You seem to have insisted on taking a pretty obscure route to get
there. And that isn't true at all for most hams, at least it wasn't the
case for most hams before the big ease-up in testing and requirements.
Not everyone has a technical nor engineering education. If you did
you can count your blessings. Not everyone was that fortunate.
As a 14 year old I sure wasn't. 13 years later at Extra time
I had a much better background, but I sure wouldn't call that test
session trivial by any means.

Even with the
"reform", the question pools, and dead-easy CW tests most applicants
have to work at it. It's doable, and with the test system in place
today it IS dead easy, so in that respect you're right. 5wpm and a
handful of quesions, with all the exact answers given in advance, with
most of them easy memorizing of rules and procedures- yep, you're right,
today even Extra is a snap. So I guess we should just send in a boxtop
coupon, all filled out and call that a test.

The entire ARS is one LOOOONG step closer to extinction, or more likely
closer to sounding like that vast wastland above 27 mhz.

It's what happens AFTER you qualify for
> a license which counts.
>

You might want to run that one past the FCC. Seems they couldn't care
less what you do afterward so long as you don't call negative attention
to yourself. And they DO pass out the licenses, you know.

> "Reality doesn't care what you believe."

Good luck on recognizing it. IMO you're not doing all that well so far.

Well, I suspected the programs might have gotten at least somewhat better over the years. The author of the program I had wrote about trying to compensate for bad code by looking for patterns instead of focusing on each individual dot and dash as it was being sent. The program also didn't use hard rules for dot, dash, and space, length, instead interpretating each as it went along. Obviously, I don't know the details, but the program did do a pretty good job considering it was just a simple programming example included with an operating system. My only complaint was that it didn't send code like some of the other programs advertised, but I couldn't have used that back then anyway.

I don't think I said it didn't, Mike. Instead, I'm pretty sure I said CB "went to h*ell in a handbasket" after the Hollywood movies of the time. Is there some conflict in that? Do you not agree that CB increased on popularily dramatically after those movies and that problems increased dramatically as a result of that growth? That increased popularity was the final nail in the coffen of civilized CB. Unless there is some conflict I don't see, I stand by what I originally said.

Hello, Reg

Well, I'm sure you'll get some flames on that comment, but it sure is nice to hear some honesty once in a while. I've read comments carried in news organizations some years ago. A number of Europeans were appalled by the number of homeless in the United States. Oh, some of the "conservatives" have broadcast a lot of hot air and some folks will call anyone disagreeing with their position "card - carrying - liberals", but the fact is there has to be some reasonable compromise to keep as many folks happy as possible. Also, it is necessary for any civilized nation to provide some level of support for those citizens unable to take care of themselves. Mind me, I am not saying that we are or are not doing that toady. However, it is fortunate that we have a very powerful weapon here. It is called the vote. If enough folks get upset, it will show despite the 30 second sound bites and handshaking LOL :)

It's spelled "persona", Len. In the quoted post, you do not mention your name,
address, or other identifiers. Just "Avery Fine" and nothing else. Some people
would say that you were trying to conceal your identity. But your hostile
persona comes through....
>
> Yet you GRASP AT STRAWS in trying to light up a Flame War to
> satisfy your childish pique in here.

"Childish pique"? You're the one shouting, calling names, making fun of other people's jobs, military and government service, education, technical achievements, geographic location, gender and sexual orientation. Pretty childish stuff you post here. Like rewriting the reference line of that quoted post so that Dave Heil's name becomes 'Sig Heil'. Really mature stuff, Len old boy.

Me, I'm simply correcting your mistakes. You said you never used a certain screen name, and I proved you to be mistaken. In error. Wrong. Incorrect.

Live with it.

Carl got a post-restructuring Extra

Bruce got a post-restructuring Extra

Carl does not make fun of Bruce's amateur license

Bruce makes fun of Carl's amateur license.

Carl does not distinguish between "real hams" and others.

Bruce says a sizable percentage of amateurs are not "real hams".

Carl is actively trying to defeat the threat of BPL.

Bruce doesn't give a damn about BPL.

Who should we respect and thank, and who should we despise and ignore?

Once upon a time, I was a new Novice, struggling with 5 wpm code and a simple homebrew station. Was I not a "real ham" back then?

Once upon a time, I was a Technician, having a great time working 6 meter AM on Field Day with the local club. Was I not a "real ham" back then?

> system when the drop the morse code test?

This is the biggest reason that I believe it will take quite a while to remove the Morse test. There will probably be a lot of changes that need to be discussed and made, if the licensing structure is to make any sense.

My earlier prediction was 4 years in a "guess the drop time" contest we started earlier in the year.

I would guess that we will have either two or three classes, as we do now:

The technician license will probably be very similar to what it is now. I don't know that any significant changes will be made.

The HF licenses are a much murkier area.

If there were to be only two license classes, my wish would be that the testing regimen would be more or less what the Extra is now.

But there may be some resistance to that, and it is understandable. There is no reason not to have an entry level HF license similar to the General.

I tend toward two license classes, but don't have any strong feelings against three.

Testing......

The multiple guess format is probably here to stay. I don't think it is as bad as some say. Reading the answers in a textbook or reading them in multiple choice format is all the same to me. It took me a week of fairly steady study to get ready for the exam. The way they get you to learn is to have a lot of questions, and only test on a few.

And as a fairly new Extra, I can say that those answers don't always show up in the same abcd order as they do in the question pools. So you really do have to know an answer.

I would like to see the tests a little more in depth (note I don't say harder) with more operation questions. Perhaps even a post-test booklet

with good operating procedures. I really needed this after passing my general. I had some small HF experience from contesting with the club, but contesting etiquette and everyday etiquette are two very different things.

My biggest hope is that we take the time to make a good system, and not come up with some Byzantine mess.

But to do so would require the FCC to change the way it has viewed Amateur Radio almost since its creation. If we argue that we're just another radio service (like CB), with no connection to anything outside Amateur Radio (other radio services, etc), then the argument supporting our massive frequencies is sharply weakened. The emergency communications aspect is not enough to support that because we can do that with far less frequencies (a few frequencies on each band, with perhaps far less bands). We have to be very careful here that we don't cut our leg off in the process of trying to save the foot (or, in this case, CW testing).

> My job is like that. The building is really well shielded
> and I wanted to run an inconspicuous 30/40m SW+
> QRP rig from my desk.

We took this apartment (paid for by the VA) to allow my wife to easily attend school just down the street. Sadly, there is enough metal in this building to build a few dozen Army tanks. Even worse, the apartment is directly above the owner's apartment and he likes to spend a great amount of time outdoors on the patios out back (the front is directly above the office entrance). I've tried several homebrew internal antennas, but none of them would allow me to consistently hit a repeater just a few miles away. We're hoping that, once the owner gets used to us, he'll eventually allow a small antenna. But, as it is now, the only way to talk on the radio at home is to walk out onto the balcony (and the metal in the building even effects that).

Yes, yes, tell us more about "how to score big in TV and moom
pitchas." Shall we hang around the Writer's and Producer's building
at the intersection of Magnolia Blvd and Hollywood Way in Burbank?

The Academy of Television Arts and Sciences isn't too far from there
on Lankershim Blvd.

"Everybody Loves Raymond" is well-liked in the entertainment
community here and respected for turning out good programs.
There's no equivalent show, such as "Everyone Loves Morse Code."
Work on that. You might have next year's Emmy Awards sweeps.

>American culture considers CB radio to be used mostly for evading
>speed-traps.

Only from "Smokey and the Bandit." Try "Flatbed Annie and
Sweetie-Pie," a 2-hour special for TV starring Annie Potts
(before "Designing Women" long-run sitcom) and Kim Darby
(after "True Grit" - the movie - and long after TOS Star Trek's
"Miri" where she was the title character).

>This illustrates a basic conflict (man versus society)
>which is featured in forms of entertainment predating the Trojan war,
>let alone CB radio. This particular conflict also appeals to the
>American mind-set of bending the rules and avoiding punishment.

"We Americans" have such a "mind-set?" I don't think so.

Perhaps the SWINE (Students Wildly Indignant about Nearly
Everything) have such an attitude but NOT the mainstream.

Anything out of the ordinary is suitable for conflict. I'd say that
something like code-lovers trying to put across their favorite mode
as "superior" in the year 2003 easily qualifies for CONFLICT! :-)

>Amateur radio is used for extending the state of the art, for
>expressing international goodwill, and for emergency communications.

"State of the art" - for advancing the radio art of the 1930s, yes.

"Expressing international goodwill" - Highly debateable considering
the multitude of WARS that have existed all over the world since only
the past half-century following the end of WW2. Go into any Almanac
and count the hundreds of armed conflicts and then correlate that to
the involved countries having amateur radio licensees. NOT a good
analogy.

"For emergency communications" - limited largely to Health and
Welfare messaging not involving the REAL emergencies nearly always
handled by the REAL professionals. The viewing public looking at news
and Special Reports can see for themselves that the Pros are very
involved...there is almost NO video-audio carried of the "noble, valiant
battles" of the amateur radio community to do any ACTUAL emergency
communications.

>The first two make for bad theater, but the last has potential.

The "last" has zero potential except for very fictionalized scenarios.

>Movies and television shows have been created around this type of
>topic for quite some time, with man versus nature being the most
>relevant conflict in this case.

Not quite correct. Try man versus man for conflict scenarios as the
top. That would be correct.

"Seventh Heaven" and "Joan of Arcadia" don't fit your conflict profile.
"Leave it to Beaver" didn't and neither did "Father Knows Best"

>Amateur radio is usually only used
>when normal communications systems are unavailable.

Where? I can only think of one and that was quite some time ago,
"The French Atlantic Affair" a special movie for TV that was
DRASTICALLY rewritten for TV from a fairly good novel about hijacking
an ocean liner.

>This doesn't
>exactly happen on a weekly basis, so it'd be difficult to make a
>television show based on this scenario. As for a movie, well,
>the potential is there, but I haven't seen it used effectively. It
>was a gimmick in _Frequency_ but personally I'd rather see something
>like the story of the operators lost from Mount St. Helens, or maybe a

>disaster flick covering The Big One out here in California.

There was an actual event of climbers rescued on Mt. Ranier through the aid of a pre-teen gal hearing the climbing party calling for help on an FRS handheld. That was in the northwest papers a couple years ago and even a brief TV clip. Didn't involve amateur radio.

Which quake in California did you want to feature? I was right here for the 1994 Northridge quake. Not a single bit about amateur radio doing valiant and glorious "emergency comms" when the entire electric power supply for 10 million folks got cut off. The pros were all set for such an event and did their best from the first tremblors...they were equipped and trained and constantly drilled for it.

>Oh, yeah, Morse code. I got a kick out of the satellite scenes in
>_Enemy of the State_. Dahdidahdit dahdadidah.

Good action movie but I don't remember any "CQ" calls in that...a conflict about man v. other men with differing political ideals and the power brokers in high places all trying to "get" a single man. Wish fulfillment. Well-done flick, held the audience to the end.

"The French Atlantic Affair" was a good, "tight" adventure novel with a new twist on hostage-taking (the entire crew and passengers of an ocean liner) by some self-styled terrorists who were not Arabic in any way. To some its scenes of sex and drugs were over the top. It did have the advantage (for PCTAs) of saving all on the ship through ham morse code contacts from one of the passengers via a ham in L.A. who had contacts with Rand Corporation experts in chemistry and medicine. A bit far-out but less so that Tom Clancy's work. The novel was the work of a licensed radio amateur.

In the mystery of evolution of novels to TV, "The French Atlantic Affair" got a thoroughly abominable rewrite to much, much less than the premise of the novel...the hams doing the sneaky communications behind the terrorist's backs were changed to young pubescent kiddies (both of whom had 1x2 callsigns). A terrible dissapointment to anyone who had read the novel. It could be made into a 2 hour, 10 minute motion picture with the main points and characters relatively intact from the original. It would be far better than the pap it turned into on TV (a sort of "Love Boat" with more nasties than usual). It would have shown amateur radio to be a true (though fictional) hero in the story.

No PCTA seems to have read the novel. Maybe the sex turned them off? :-)

From nearly any common dictionary -

Crony - a close friend. derivation from the Greek "kronos"

Plural form is "cronies."

Besides much else, what would you like help on in English?

Whatever happened to the beloved Elecraft kit? Fail to work?

>> In fact, almost any knowledge of radio would allow that.
>
>What homebrew rig would you recommend to a newcomer with no
>experience, few resources, but a great desire to learn?

A used 10 meter transceiver developed from a CB rig.

Push-to-talk, release to listen, only voice needed (no hours and hours
of practice at morse). Lots of jargon and phrases to learn to avoid the
catcalls from the traditionalists in hamlingo.

Such transceivers have a two-decade maturity of existance, are fairly
standard in structure/architecture.

I do wish you PCTA would get your acts together. The status quo
traditionalist and resident mysoginist Roll says it is "all about
operating!. You say it's all about "technical building."

>How can we say we're a "technical" radio service if we don't even
>design, build, repair or maintain our radios?

From any sort of inspection of the photographs of various amateur
radio "shacks" of the last three decades, the vast majority use
ready-built equipment.

Solid-state radios don't need their tubes changed.

>What does it matter if a ham knows how the DDS synthesizer in his
>Ikensu box works if, at the first sign of trouble, he packs it up and

>
>I don't know - but there are some. One reason there aren't more is
>because of the de-emphasis of HF and CW as a starting point in the
>ARS.

Tsk, tsk, tsk. At age 20 I was made responsible for operating and
maintaining top-of-the-line (for 1953) high-power HF transmitters (three
dozen of them) that DID NOT USE any morse code modes.

>You think an average motivated 13 year old couldn't build a simple CW
>rig today, put it on the air and make lots of contacts with it?

Why are you so FIXATED on the ONLY WAY a newcmer can get
started in ham radio is to be a young teenager?

Are you afraid that those older than teen years will realize what a farce
the start-simple-at-CW thinking of the 1930s is in the year 2003?

>didn't have the time, or they refused to "jump through the code test
>hoop".

Well, SOMEONE had to mention had to mention technical advances
in amateur radio by other than the USERS of ready-built gear.

Lord knows there were NOT a lot of "cutting edge" stuff from the old-
timers carrying on their love affairs with on-off keying codes.

Yes, Dan Tayloe did a very good advancement in one small sliver
of low-powe radio technology and HE deserves the credit, not "CW."

When used with a polyphase audio network it works excellently as a
very high IP3 direct-conversion QRP SSB receiver. NO morse code
required.

But, you state that the Tayloe mixer was coneived JUST for morse
code reception. That's patently false (Dan has his patent application
in and waiting...which can sometimes be 3 years).

We ALL KNOW in here that you are a code fanatic, Sheriff Jimmie.
All the proselyte text is clogging everyone's HD. Try to remove the
blinders and realize that all DO NOT think as you do of the "excellency
of morsemanship" a la the 1930s standards and practices.

"Dee D. Flint" <deehays@qix.net> wrote:
>
> The same argument can be used for Smith charts since
> Techs are not required to learn that either.

Its not an argument about whether one is required to learn something. The issue is what makes one person "more qualified" or "more experienced" AS A HAM RADIO OPERATOR than another person. Now, unless the Smith charts become the sole criterior for that judgement, the total sum of what it takes to be a ham radio operator, the premise that one person is "more qualified" or "more experienced" as a ham radio operator simply because he knows the Smith charts is flatly wrong.

> Morse code is a skill used in amateur radio so someone
> who knows it is a more qualified operator than someone
> who doesn't whether or not it is a required skill. Just as
> knowing how to use a Smith chart makes one more
> qualified.

Likewise, Morse code is not the sole criterior for juding whether a person is "more qualified" or "more experienced" as a ham radio operator either. Therefore, the very premise behind your statement is fundamentally flawed. Since Morse Code is no longer required to be a ham radio operator (note the 200,000 Techs), it is absurd to judge someone as "less qualified" or "less experienced" as a ham radio operator simply because that person doesn't know Morse code.

You're "all else being equal" disclaimer is silly, Jim. When talking about human beings, there is never a time when all else is equal. Regardless, by your logic, all else being equal, since I've posted more messages in this ham radio-related newsgroup than most (perhaps even you), and computers are used in connection with ham radio to send similar messages, that alone makes me "more qualified" and "more experienced" AS A HAM RADIO OPERATOR than most (perhaps even you). Of course, that very premise is absurd, isn't it? And your premise is equally absurd. In my opinion, only a truly desperate person would grasp at a tiny thread like this to support a claim that they're "more experienced" or "more qualified" than someone else.

Are those "*entry-level* amateur radio operators" something other than
Amateur Radio Operators, Larry? If not, my statement is correct - Morse code
is not required to be an Amateur Radio Operator.

> If and when the Element 1(a) code test is abolished, that will
> simply prove that the FCC has a low opinion of the ARS as
> a whole, and that it responds to political pressure -- i.e.
> petitions to remove code testing, and the comments which

No, it simply means the FCC is responding properly to the realities of the
world around us. Larry.

"We are persuaded that because the amateur service is
fundamentally a technical service, the emphasis on Morse
code proficiency as a licensing requirement does not
comport with the basis and purpose of the service. We
note, moreover, that the design of modern communications
systems, including personal communication services, satellite,
fiber optic, and high definition television systems, are based
on digital communication technologies. We also note that
no communication system has been designed in many years
that depends on hand-keyed telegraphy or the ability to
receive messages in Morse code by ear. In contrast,
modern communication systems are designed to be
automated systems. Given the changes that have occurred
in communications in the last fifty years, we believe that
reducing the emphasis on telegraphy proficiency as a
licensing requirement will allow the amateur service to, as
it has in the past, attract technically inclined persons,
particularly the youth of our country, and encourage them

to learn and to prepare themselves in the areas where the
United States needs expertise." - FCC WT Docket No.
98-143 RM-9148 RM-9150 RM-9196

The exact same arguments could be made when talking about the elimination
of the Element 1(a) code test.

Excuse me? I'm not a member of, nor do I represent, NCI or NCVEC. Again, I've never made such a claim. If you have a problem with something those groups have said, take it up with them. I have no accountability whatsoever for anything they've said or done.

In its 1998 Biennial Regulatory Review, the FCC said...

"Given the changes that have occurred in communications in the last fifty years, we believe that reducing the emphasis on telegraphy proficiency as a licensing requirement will allow the amateur service to, as it has in the past, attract technically inclined persons, particularly the youth of our country, and encourage them to learn and to prepare themselves in the areas where the United States needs expertise."

I don't see anything in there about a technical revolution, Jim. Instead, I see an effort to attact "technically inclined persons" and "encourage them to learn and to prepare themselves in the areas where the United States needs expertise." I fully agree with that position. If someone has said something different, that is not my position, nor the position of the FCC. By the way, I also agree with that as it applies to the elimination of the code testing requirement.

I think you're right, Jim. My guess is that Element 1 will be dropped and
all Techs will be given Tech+ priviledges. I don't expect anything else to
happen.

That's not to say that some reform of the licence classes isn't overdue,
but the FCC position is that until there is some sort of consensus they
won't do anything about it.

Only that he has fooled everyone on rrap and whatever CB groups he
posts to, excepting for you, of course.

> All I've done is to demonstrate that it is possible to skim through an Extra
> Class practice exam in less than 8 minutes and pass.

You haven't demonstrated that Bruce can do it, in the alotted time,
accuracy, and lack of preparation parameters. Let alone the wager of
$250 with two "CB-Plussers."

And I've said that it's
> possible that someone's lack of correct spelling, grammar, and logic can be an

I figure 3 classes... probably a entry level "no HF" license, and
then 2 licenses that reflect different levels of expressed knowledge,
that is, seperate amounts of frequency priviledges.

I'd prefer more, but for some reason I feel it will settle to 3....
What WAS a no code tech license will be the equivalent to
the new entry level license, what is now the general class
will be the middle license, and extra being the "top" license.

Personally, I think they should just "drop" the code part
of the test and not effect the number of license, keep them
the same, or increase them back to what it was before.

My $.02

Why should the FCC simply grandfather the Tech (no code) to Tech plus (code
and Novice test) ??

The Tech (no code) has no HF test questions. (as I understand it). Thus there is no reason a Tech (no code) would, or should be qualified to operate HF.

Go to http://home.earthlink.net/~k0hb and click on the link "FCC
Comments" in the left column.

That describes the most sensible "post-CW-test" structure.

So what? I don't believe any of what he claims. But I wasn't there.
Neither were you.

Someone here claimed that it was "impossible" to pass the Extra in
under 8 minutes. So I proved it could be done on a practice Extra by
doing it myself. That's no proof that Bruce did what he claimed.

Nor do I give a rip.

It's actually pretty clear, Dan. The big objective here is to lower
the requirements until anyone can qualify at will without needing to
complain about how hard it is.

It's a "gimme," Dan. In other words, some may be hoping that by "giving"
no-code Technicians an "unearned" slice of HF, it can be called an agreeable
compromise to retain Element 1 for the Extra. (Perhaps even the General.) I
personally don't think it'll work, but the FCC might go for it. Who knows?

That is exactly the way it is working. And heres the Kicker, the next set of Knuckle Draggers are going to complain the written is to HARD. Then we will lower it again.
What is amazing is the New Hams think they have done something, by passing a Dumb Down Test. They also think its perfectly OK, and will use any excuse to try and say that they are EQUALS. But anybody with any sense at all will know that it is not TRUE.
Its amazing the extent they go thru to try and Justify Dumbing Down, and refuse to admit its Dumbing Down.

I like that proposal. But its way to simple to be accepted. Maybe the govt could spice it up by slicing up the bands...oh sorry. They already tried that. hi.

Well, I wouldn't say so for everyone. Not that I feel all that warm and fuzzy about getting my drivers license, but there are many labors in my life that I do feel proud of.

Probably just my disposition. 8^)

While I obviously support eliminating the Morse test, I do NOT
support ANY lowering of the requirements on the written tests.
(Felt I needed to state that again ...)

The written tests can be made "better" (that does not necessarily
mean "more difficult") by adjusting the question pools to reflect
modern technology, RF/electrical safety, rules/regs, and operating
practices. And, while there is a minimum ratio of questions in the
pool to questions on the tests, there is no maximum number of
questions that can be in the pool ... those who think (and I disagree)
that the question pools are simply "memorized" can push the NCVECs
to increase the number and diversity of questions in the pools.

BZZZZZZZZT ... wrong answer ... took it EXACTLY ONCE.

Not that I feel I owe Bruce (or anyone else, actually) an explaination,
but just to set the record straight about how full of BS Bruce is ...

I kept being busy with work, work travel, an elderly mother in
poor health and any number of other "excuses" and didn't get
around to going to a VE session until I did ... so what?

I finally decided to set the goal of going and upgrading by a certain
date.

I went to a VE session on a Friday evening, run by one of the
local ham clubs.

The session never happened because the VE who kept the
paperwork for the team had accidentally tossed all of the
forms while "cleaning out" the file box where he kept
the stuff.

I came home, got on the internet, and found a session the
next day (Sat morning, early) about 1-1/2 hour's drive from
home, got up early, drove down, took the test (1st one finished),
and walked out an Extra ... no sweat, no big deal.

No, it's a very serious matter. If Bruce had a clue he'd know that.

> >Bruce doesn't give a damn about BPL.
>
> THATS TRUE

That statement alone pretty well should give folks a good
idea of how much credence to give to Bruce's opinions.

I don't think it can work by "just" dropping the test. Too many loos
ends. Tech plus, novices, that kind of thing.

> Glad we're agreed on that.

We are NOT agreed on that ... the fact that the military USED to use Morse (a lot many years ago when it was the only way to communicate via radio) did, at one time, have SOME validity in terms of the "trained pool of operators" argument ... however, since they don't use it to any degree any more, it has an equal bearing as NO LONGER BEING A REASON TO MAINTAIN A MORSE TEST REQUIREMENT.

I simply stated that it wasn't a "slam-dunk" issue either way ... just one component of the total picture of justifying/not justifying Morse testing.

(Nice try at playing the "spin" Jim, but it doesn't fly ...)

>over the years. The author of the program I had wrote about trying to
>compensate for bad code by looking for patterns instead of focusing on each
>individual dot and dash as it was being sent.

It is a trivial matter to do decisions on "longer" v. "shorter" once the on-time has been converted to a numerical value...which is easily done by a simple comparator gating a much higher repetitive pulse into a small (8-bit) binary counter. That forms a "width-to-digital" conversion. The count is then written into working memory and used by the main program. Once that is in place, the main program can do its "pattern checking" most anywhich way.

>The program also didn't use
>hard rules for dot, dash, and space, length, instead interpretating each as
>it went along.

That part is the "adaptivity to rate" section. In an ordinary PC it is fairly
easy to access the internal calendar clock for 100ths seconds time hacks (actually shorter if you know the calendar-clock software details).

By comparing the overall "on" lengths it is possible to determine the bit rate per unit time and thus the equivalent WPM rate.

>Obviously, I don't know the details, but the program did do a
>pretty good job considering it was just a simple programming example
>included with an operating system. My only complaint was that it didn't send
>code like some of the other programs advertised, but I couldn't have used
>that back then anyway.

The sending part is fairly straightforward involving the keyboard addressing a lookup table in memory and organizing the outgoing "on" and "off" times

at whatever rate is desired.

The interesting part of modifying that is to add some random variability to the "on" and "off" times, which is selectable to bias those if desired, and thus create the equivalent length-rate-bias "swing" of a human telegrapher! :-) Sending is much easier to do and duplicate than receiving.

As I said much earlier to others in here, I've seen it done and looked at the source code, heard-seen it in action. The PCTA will not believe it since they don't WANT to believe it so any argument with them is an exercise in futility. :-)

As I also said earlier, there just isn't any market for such a program since there is so little morse code communications being done in radio now as compared to a half century ago.

Brian, you might as well be "discussing" anything with a stone wall.

Rev. Jim, the Sheriff of the Wild EM West, is of the OLD School in
amateur radio when Kode was King and it was really the retirement

home of all the displaced radiotelegraphers of yore.

If you don't "contribute" noble, good, and true words and gratuitous praise about morse code and morsemanship, he will tell all that "no 'contributions' to the hobby have been made." :-)

He and other morsemen live in a de facto Archaic Radiotelegraphy Society ("ARS") which also graciously allows other modes to exist just to prove the "inherent superiority" of on-off keying codes. "Advancing the state of the amateur art" is defined by him as anything that improves on-off keying modes. Anything else is "irrelevant."

Anyone persisting in talking about other modes favorably will be denigrated, humiliated, and generally not be treated nice. Or they may be told to "go to Google and find the post and repost it here to prove <something>." :-)

LHA

Yes some of them need to pay a lot more attention to the quality of their
sending.

Actually it would work quite easily. Everyone keeps their current
privileges except that all varieties of Techs are combined to one class of
Tech with the privileges of the Tech with HF.

However, as you know I think they ought to keep the code test.

Why do you suppose N0IMD might find that to be a concern? Those of us
who actually work CW usually can copy variety with no problems.
His abilities are his own concern and his responsibility.
Yet he trolls on.
Lennie's understudy, for a fact.

Tell it to the FCC. A Tech who passes Element 1 gets the same HF privs as a
Novice or Tech Plus.

>idea of how much credence to give to Bruce's opinions.

My point exactly.

Licenses and tests won't mean much if we can't work anybody through the noise.

--

BPL is a bad idea in so many ways. For example, I do *not* want to be around when (not if) one of those bypass couplers decides to fail and puts 13.2 kV into somebody's service entrance.

And after reading a "white paper" on 801.15be (I think that's the designation - you are probably familiar with it, Carl, it uses multiple carriers in the 3-7 GHz range) it mystifoes me why anyone would think 78 MHz of bandwidth is going to compete with what systems capable of six times that can do - without wires.

Then there's the monopoly issue, and the favoritism issue (cable companies don't get a bye on Part 15....telcos don't get a bye on Part 15....Wi-Fi doesn't get a bye on Part 15...) and the simple fact that electric utilities have a hard enough time keeping the lights on and their equipment from crudding up the ether with plain old corona noise.

Plus the fact that almost every other country that has tried BPL has given up trying to make it work. Japan has out-and-out banned it.

It's been almost 3 months. I'm convinced FCC had the authority to dump Element
1 soon after WRC 2003 ended.

Of course it's not a high priority for them.

>That's not to say that some reform of the licence classes isn't overdue,

Having the amateur license classes make sense has never been much of a priority
to the FCC - at least not for 50 years or so.

I still remember getting my first License Manual in 1966 or 67, and discovering
that there were six classes of ham license. Interesting system, I thought, lots
of steps to climb the ladder to the top.

Then I found that four of the six license classes granted all operating
privileges. Three of them could only be gotten by mail, and two could only be
gotten via FCC examiners .And one of the classes was closed to new entries but
those who had 'em could keep on renewing 'em. Huh?

Even more mystifying was finding out that things had been that way for more
than a dozen years.

> My earlier prediction was 4 years in a "guess the drop time" contest we

>started earlier in the year.

You may be right.

I see three possibilities:

1) FCC just dumps Element 1 and not much else

2) FCC does the whole restructuring thing all over again

3) FCC does nothing at all. (For a few years, anyway).

Before you dismiss that last one, note how long some petitions have been
hanging fire with the FCC. Like the Novice refarming petitions.....

>

That would be unfortunate.

The whole idea of VHF/UHF as the entry is an artifact of S25.5. Hundreds of
thousands of us started out on HF. All it takes is a little know-how.
>
> If there were to be only two license classes, my wish would be that the

>testing regimen would be more or less what the Extra is now.
>
> But there may be some resistance to that, and it is understandable.
>There is no reason not to have an entry level HF license similar to the
>General.

But note how the number of Techs has dropped off. W5YI has already made
statements about the Tech being too difficult for an entry-level license - and
that was with the old pool!
>
> I tend toward two license classes, but don't have any strong feelings
>against three.
>
> Testing......
>
> The multiple guess format is probably here to stay.

Unfortunately true. FCC is certainly going to insist that any test method have
one and only one correct answer, and be totally independent of examiner
interpretation.

> I don't think it is
>as bad as some say. Reading the answers in a textbook or reading them in
>multiple choice format is all the same to me. It took me a week of
>fairly steady study to get ready for the exam. The way they get you to
>learn is to have a lot of questions, and only test on a few.

One of the biggest differences between the old and new Tech pools is that the
new one is bigger - almost twice the size.
>
> And as a fairly new Extra, I can say that those answers don't always

I'd like to see the test subdivided by subject area so that you could not pass with, say, less than a certain number of safety questions wrong.
>
> My biggest hope is that we take the time to make a good system, and >
not come up with some Byzantine mess.
>
Agreed, but don't count on it. Look at the last restructuring - took almost 2 years, and the end result was a complete hodgepodge.

One of the big problems is the "nobody loses/nobody gets a windfall" paradigm.

Even though incentive licensing was reintroduced 35 years ago, the bad feelings that were created by a system that took away existing hams' operating privileges continue. They even continue among some hams who were not even licensed at the time! So demoting anybody will be opposed strongly.

OTOH, automatic upgrades (like the 1998 ARRL idea to give Generals to existing Novices and Tech Pluses) will be opposed just as strongly by folks who don't want to see any "giveaways".

That kinda limits any cleanup efforts.

What does it matter, Bruce? According to you, you're such a smart little human being, the tests were a breeze - no effort, no study, required. Yet, at the same, you criticize others for not putting out enough effort. Make up your mind. Do you want effort? If so, you need to go back and take those tests again (this time putting in the effort to actually learn something about what you've read). If you don't want effort, stop complaining about others not wanting it either.

Nonsense. If someone offered me a vacation in either of those countries, I'd be packed and ready to go in an hour. You criticize Germany, yet we're the ones (the United States & Allies, after WWII) that put constitutional restrictions on that country's military and its participation in foreign conflicts. France, when it dropped out of NATO decades ago, also swore off any participation in NATO and U.S. foreign conflicts. Both of those countries now have a several decade tradition of this, yet you seem surprised, even outraged, when they maintained that same tradition during our invasion of Iraq. Unlike some countries, they mean what they say. If you now want to punish them for that, go right ahead. But don't expect everyone else to be a party to it. I, for one, will never punish a country for choosing peace over war.

Didn't you take the Technician license exam, Dan? If so, you should be able to remember that it does indeed have questions about HF (bands, sub-bands, propagation, operating considerations, code use, and so on). After all, Tech Plus license holders, with limited HF privileges, take the exact same written exam. Some Novice material (also limited HF privileges) was added to the Tech license exam. Remember any of this? Now, what were your reasons again for no-code Techs not being qualified to operate HF?

>

One cannot properly appreciate that until you've seen a device properly
insulated and rated for operation at HV such as a plate coupling
capacitor fail destructively, as I did on several occasions while
employed as a field engineer working on medium/high power transmitters.
The resulting explosion forcefully scatters small pieces of the device
throughout the space in which it was mounted, and beyond if an outlet is
present.

I once was called to troubleshoot a satellite reciever system which
the owner thought had been struck by lightning. It had not. What had
happened was that the owner had cut down a tree which was situated
about 100 feet from the satellite antenna, and when the tree fell, the
very topmost branch barely brushed a 7KV power line. The resulting HV
pulse into the ground induced high voltage into the satellite receiver
cabling which was buried in its routing to the house, and the HV pulse
wiped out the complete satellite receiver and the TV set which was
attached to it.
It's a fair comparison, but was not anywhere near a direct connection
to the HV as would occur when a BPL bypass coupler would fail. The
destruction of the household would be VERY complete, and all occupants
placed at extreme risk.
Would you dare consider sleeping under an elecric blanket???

To place the general public at risk by bypassing the home electric
service transformer is blatently ignoring the extreme risk involved.

> And after reading a "white paper" on 801.15be (I think that's the designation -

This proves that it's a snow job by BPL promoters who know that the
people they must convince almost totally lack knowledge of the techcial
facts. And that they will be able to ignore their own technical advisors.

> Then there's the monopoly issue, and the favoritism issue (cable companies

Talk of siezing the oppportunity! Clearly BPL promoters are working
feverishly to get this door opened, and blocked open by occupation,
before the opposition can lock it closed.

> Plus the fact that almost every other country that has tried BPL has given up
> trying to make it work. Japan has out-and-out banned it.
>

I don't think facts are even being considered as a part of this
decision. I really believe this is a major end run around all the
safeguards that are the very reason for the existance of the FCC.

As I read it, FCC has no impetus to hurry to do *anything* more re the ARS anytime soon, especially given the last restructurig addressed all the issues they thought important at the time. They can factually say that they did that, including reducing the code test to minimal levels which result in no burden to anyone. Even the bi-annual revue would not need result in more than the statemtent that "as a result of the R&O following docket 98-143, we we find no further action to be necessary". Or maybe not, but with the added workload and drastically reduced budget and staff, I think it's wishful thinking to believe FCC will spend more resources on the ARS than absolutely necessary. If there wasn't a ham or two on the staff I doubt we'd fare as well as we have been.

Then there is the very strong possibility, given the wording of FCC documents and statements of staff,--

wording which NCI members choose to interpret as stating intent to totally do away with code testing, but which doesn't say that at all

--that they may NOT drop element one at all, and instead grant low band HF access to one or more of the current lower grades of license which now have none. That's a totally justifiable position, the no-code mantra aside.

For some reason, this reminds me of all those people who have me in
their address books, and yet have allowed their computers to be infected
by the Swen virus. Now I am being e-bombed for it.

So I doubt that most people would even worry that they could get their
systems fried. They just don't know any better.

Further, the fact has recently surfaced that the UK did exactly this
instead of completely dropping code testing, as was so widely
and loudly stated by NCI members.

UK issues issue code-tested licenses, and the word is that a majority
of UK hams prefer to take those tests, and qualify as code-licensed hams
with a callsign issued that indicates that fact.

As things are now, a no code tech can take the 5WPM element 1 test, and
gain access
to HF as a novice. Besides, what's *that* different about HF vs VHF
(aside from
propagation)? One viewpoint would say that all a ham really needs to
know are:
rules and regs, electrical and RF safety issues, some knowledge to
judge if a
rig is in band and on a desired legal frequency and is not emitting
excessive
harmonics, and how to handle RFI problems. This because the FCC allows
all hams
to build, repair and adjust our transmitters. Even novices. I haven't
heard of
any FCC enforcement actions because of deficient equipment lately.
Today it's
mostly bozos acting up.

On September 12, 2001, after 3000 Americans were butchered by religious fanatics, thousands of French spontaneously, with heartfelt tears in their eyes, marched with American flags in sympathy. At France's urging, NATO immediately invoked, for the first time in its history, the clause of common defense.

Almost two years later, over 14,000 French, mostly aged and infirm, are felled by one of the worst extended summer heat waves of the last hundred years. Our glorious right wingnuts laughed and said it served 'em right.

I know this is off-topic, folks (my first, I think), but there was a time when you could be a conservative and a patriotic American without spouting dittohead trash or playing Newtball with foreign policy. The country would be better off if the real conservative, patriotic Americans left the John Bircher wingnuts in the gutter where they belong, and take their rightful place running the country and guiding America through some difficult times. If nothing else, after we're done alienating every potential customer in the world, who will we design for or sell to?

My pre '87 tech license was the General written test. Which obviously
had to ask
about HF. Aside from propagation, there really is nothing different
about HF vs.
VHF or UHF. Oh, okay, you don't get to build a 20 element rotatable
beam for
80m. Unless you can borrow an aircraft carrier.....

The FCC might require no code techs to do a "paper" upgrade to tech
plus, like they
made pre'87 tech plussers do a paper upgrade to get a general license.
I was one of
these, and decided that I should also upgrade my license to "extra". So
we may see
more new generals happening if the FCC does it this way.

Well, from the information you've provided, I can safely assume that
your apartment is at least on the second floor. (Unless your landlord
lives in the basement.) You can probably get away with operating at
night with a wire hung from the balcony with a tuner. 40m is hoppin'
at night and you certainly don't need much power to work distant
stations reliably. I fired up my 40m Small Wonders SW+ QRP rig for the
first time yesterday and promptly worked a chap in Rochester, NY. I
received a RST report of 459 with only 2.5 Watts, simply amazing! Of
course, these are just helpful suggestions...YMMV.

Here ya go, Dwight. Came across this and thought about your situation.
This one's already built and for the Novice portion of 40. (Add
Element 1 to your Tech ticket and viola.) Good luck in any case.

I think you are wrong .... in the UK, if you pass the amateur exam now
you will be issued an "M0" call which in itself does not say you have
or have not passed the code test. My call is an old VHF-only and I prefer
to keep it, whether I am called "lazy" for not obtaining the code test or
not. It's my call since 1994 and I like it!
If you wish you can take a code test here and get a pass certificate which
you can present in countries that still have the code requirement.
To obtain the Foundation Licence (M3 calls) you attend a "Morse appreciation"
session - it is not a test.

There is currently only ONE license class that does not have HF access and
that is the no-code Technician license. All other classes, including Novice
and Tech with code, do have HF privileges.

Even a paper upgrade would be unnecessary since the category of Tech Plus
does not exist anymore. These days Techs who pass the code must keep a copy
of their code CSCE to prove it in case they are ever questioned. Currently
when Tech Plus licensees renew, their license simply says Tech and they
should keep a copy of their expired Tech Plus to show they passed the code.
All that the FCC would need to do is issue a ruling that all Techs have the
same privileges as the old Tech Plus or Tech with code. The result is that
they would no longer need to keep a copy of their code CSCE or old Tech Plus
license.

paradigm.

The NCI and NCVEC Petitions are "nobody loses/nobody gets a windfall"
propositions ... since a tech now gets HF privs if he/she passes a 5 wpm
code test, the elimination of the test would not be a "windfall" if all
techs
got the same privs as the old "TechPlus" ...

Everything else stays the same.

Note there is NOTHING in the NCI (or NCVEC) petition about any form
of restriction of Morse use, any expansion of the phone bands at the expense
of Morse (or other digital mode) use, etc.

I think these proposals fully meet the "nobody loses/nobody gets a windfall"
paradigm.

>license.
>
Yep, they could do that easily.

But it would be almost exactly what ARRL asked for 5 years ago, when they proposed that Techs get HF CW privs.

The "Tech-with-HF" semi-class is a classic designed-by-a-committee confuser. If a Tech passes 5 wpm code, but doesn't upgrade, he/she gets HF Novice privs for as long as he/she holds onto the Element 1 CSCE. But said CSCE can't be used for Element 1 credit after 365 days.

OTOH, an expired Novice or Tech-with-code license document of any vintage is good for Element 1 credit. Pre-March-21-1987 expired Tech licenses are also good for Element 3 credit.

So someone who passed the 5 wpm code test in front of a single volunteer examiner 50+ years ago and got a Novice or Tech license as a result gets credit for Element 1, but someone who took the test 366 days ago gets no credit ofr their CSCE.

And an expired-beyond-grace-period General, Advanced or Extra license gets no credit at all.

Anyone think having the amateur license test/class regs make sense is a priority to FCC?

Of course. I should have been more clear instead of just saying "low band HF access". But if anything, the code killers have made it clear they don't regard the Novice CW allocations to be worth anything.

Likely some non-ham brearucrat had to write these rules. Said person
probably
didn't understand that someone who had a general or extra license had to
pass
a higher speed code test, which in turn qualifies them to do 5WPM. He
probably
though copying 5WPM was completely different than 13 or 20 (in a sense it is
a bit different but not enough to disqualify someone for 5).

If they want to - but they don't have to.

Perhaps there's a possibility there - have code tests, but have them be
non-mandatory. Perhaps 1x2 calls could be reserved....

Yup. And so we wind up with a continuation of the VHF/UHF heavy, HF/MF light
entry level setup that is an artifact of the old S25.5.
>
>Note there is NOTHING in the NCI (or NCVEC) petition about any form

In the case of NCI, that's "outside the charter". And NCI has promised to cease
to exist when code testing goes. Which means that if/when Element 1 disappears,
NCI's USA chapter will simply go away as an organization trying to change FCC
rules..

In the case of NCVEC, there may be more petitions and proposals. They have
already hinted at same.

All bets are off if it can be shown or even argued that the new Tech Q&A pool
is responsible for the recent dropoff in new Techs. (See AH0A site for exact
numbers.)

>
>I think these proposals fully meet the "nobody loses/nobody gets a windfall"

Some would say that getting full privileges with no code test was a windfall,
but I'm not gonna go there....

Main point is that between those two constrainsts, very little change in the
writtens or basic structure is possible.

I doubt that ... I expect that a very large percentage of techs will rapidly
upgrade to at least general, if not extra, once the code test is gone.

The idea of "eliminate the code test and give techs "techplus" privs is
logical, takes nothing away from anyone, and gives nobody a "freebie."

NCI will exist until Morse testing is gone worldwide, but you're right,
we'll have
nothing to do in the US once the FCC eliminates Morse testing for all

classes of
license.

> In the case of NCVEC, there may be more petitions and proposals. They have
> already hinted at same.

I'm not part of that group, so I can't speak for them ... if they file a
petition
seeking to water down the writtens or expand the phone bands, I'll oppose
it vigorously (personally).

> >I think these proposals fully meet the "nobody loses/nobody gets a
windfall"

The governments of the world don't seem to hold that view, so you'd be
up against the "heavy hitters."

> Main point is that between those two constrainsts, very little change in
the
> writtens or basic structure is possible.

And I think the three classes of license are reasonable and appropriate.
Tech becomes the "entry" license, general is "mid-grade," and extra is
"top." I don't see anything wrong with that ...

Mike:

I think that the most likely scenario is that they will do as you suggest,
and distill it down to two license classes, General and Extra. All current
Techs would be "grandfathered" to the General class, and the Extra will
remain the same, sans Element 1(a). This would be the easiest change
to accomplish from an administrative standpoint, and they wouldn't have
to even bother renaming the remaining license classes, which would only
risk causing resentment among current Extras. There could be, at most,
a requirement for current Techs to pass another written element, but the
grandfathering would be an easier fix.

I'd also look for them to pre-empt future petitions to increase voice
spectrum by the conversion of the current Novice/tech sub-bands to
include that mode. I do not expect the overall licensing requirements
to be made "harder" in any way, since that would only raise objections
from the knuckle-draggers and the subsequent petitions which that
would produce.

The FCC's goal, obviously, is to get as much of the administrative
burden of the ARS licensing system off their backs as possible, so I
look for them to do just that.

In other words, will they (the FCC) dumb the licensing process down further, to the point where it reaches your level? Perhaps. If not, sorry about your luck!

I am quite familiar with the text of the Restructuring R&O, Dwight. The FCC's language seems to be geared mainly to pander to those commentors who favored the reduction/elimination of code testing, and for good reason. The FCC, if they can get the code testing requirement lifted, faces a smaller administrative burden in running the ARS licensing system, an important consideration since the ARS is an economically irrelevant communications service. For this reason, I fully expect code testing to be abolished. I am certain that it *will* happen.

> The exact same arguments could be made when talking about the elimination
>of the Element 1(a) code test.

And undoubtedly will. Nothing less than I would expect from people who don't understand or appreciate the nature of the ARS, and view it as an administrative burden which deflects valuable resources away from much more economically pertinent issues. As I've said many times before, follow the money, and you learn the truth.

What do you think would be a good division knowledge wise between the classes? The tech and general are not too bad now, knowledge to privileges. I lean a bit toward having the Extra require a bit more knowledge, or perhaps experience. I know a few no-experience Extra's and it just seems (to me) that some "time in grade" might make the license more meaningful.

I wouldn't oppose a bit more "meat" on the Extra written ... but I
would oppose any "time in grade" requirements. Folks either
qualify (pass the test) or not ... "time in grade" unnecessarily
discriminates against people who are qualified by making them
wait unnecessarily.

Jim:

I consider myself to be a conservative, and I find the heat wave death toll in France to be appalling. However, I don't view this tragedy as any particular human failing; it is, indeed, an act of God. And while I won't indulge in any attempt to interpret this tragedy, it must be obvious that mortal men can do things to prevent a recurrence of such an incident. This does not counteract God's will, it just serves to demonstrate that we've learned the lesson God intended to reveal to us.

In our advanced Western culture, in spite of our social and technological advancement and the great wealth we enjoy, we are still beset with age-old social problems, such as the homeless, the ill, and the impoverished. Unfortunately, here in the United States and other "advanced" Western societies, we have, in fact, created a lot of these social problems in our attempt to solve them. By creating Welfare States which promise to be the answer to each and every conceivable social problem, we have created vast numbers of dependents who have arisen through the weakness of those who were first served by a "caring society." Shortly thereafter, it became clear to the supposedly well-meaning "liberals" who originated the Welfare State that in order to maintain and increase their political power, and therefore advance their allegedly "progressive" concept of social engineering, they simply permitted the number of dependent people expand through the promise that they would be cared for by the State as long as the liberal, socialist political ideology remained in political power. That was the power of the vote to which you referred -- and that kind of voting has given us a society which has run amok.

I work every day with people who genuinely deserve all the assistance they can receive from the working public, because they genuinely, legitimately cannot provide for themselves. However, when I go off work and am waiting in line at the supermarket, and the lady in front of me with several young children pays for her groceries with food stamps, I am not filled with the same compassion I have for my mentally retarded, physically disabled, and elderly clients. I consider people who "work the system" just because the system exists to be engaged in the worst kind of immorality; they are little more than thieves. In virtually every case, they became dependent on society simply because a system was in place which allowed them to behave in an irresponsible manner -- with hard-working people like you and me picking up the tab in perpetuity. I have no sympathy for them, only

abject disgust for their despicable behaviour and the system which not only supports it, but even "celebrates" it as individual "choice." Naturally, the children, while they themselves are innocent, are used as the excuse for keeping the system in place, and therefore ensuring that it will always keep the cycle of dependency going.

Throughout the decline of our Western culture, we have always heard that conservatives like myself are "mean-spirited," that we are uncaring, hard-hearted monsters who would starve children and cause death and destruction in any conceivable way. However, the opposite is true; it is the liberals who are creating the downfall of our society. As the expense of maintaining the Welfare State increases, the burden of the declining numbers of producers will increase as the numbers of dependents also rises. At some point, the system will collapse, and then what? The "haves" and the have-nots will go to war against each other. I'm not talking about a war of words and ideas; I'm talking about a shooting and killing war. Such an end would be the ultimate immorality of the liberal, socialist ideology, even though the violence will be blamed on the remaining conservative producers who simply reached their breaking point.

Fortunately, there is still a way out of the dismal future we face. Our society needs to make a fundamental change in which we stop viewing social perfection as the ability of the state to provide for everyone, to the ability of the state to know it's place -- to give us the freedom to achieve to the best of our ability without necessarily making government the instrument of individual achievement and success. We need to take the first step in that direction by putting an immediate end to all state and federal welfare programs which directly provide sustenance to those who choose an illegitimate, immoral lifestyle. We need to close down our borders to those who cross them simply because they know that once they do, their children automatically become bona-fide American citizens which then qualify the parents to receive public assistance. We need to bring an end to each and every political concept which supports immoral and unproductive lifestyles, and let people know that they are the only ones who bear the burden of their actions.

You are correct that we need to vote -- and the ones who need to exercise that right to vote are the ones who will ultimately pay for the Welfare State -- and in numbers large enough to overrule those who seek to benefit from it. We must regain and hold a socially conservative majority in our government. If we don't, and continue along our present course, it won't be too long before achieve terminal velocity as we proceed down the slippery slope of our own destruction. If this change doesn't happen in my lifetime, I hope I'm not around when we hit bottom.

I don't think so. FCC's work at admininistring the ARS licensing can't
get to much a level than it currently is.

Here's about what I look for:

1) Combine Novice/Tech/Tech Plus into one license, probably Tech, with some amount of lower HF band Fone and CW/Digital access. Might even use the old Novice segments for their digital/CW segment. After all, it's still the 'entry level' license.

2) Probably drop element 1 for Generals.

3) Leave Advanced alone and let attritition take care of it.

4) Leave Extra alone with a 5wpm code test. Should be 12wpm but I doubt they'll back up at this late date.

I don't expect them to do this nor anything else before the next rules review is due.

Whether or not they're being honest or just spiteful, there's a lot of
hams that accuse the largest ham radio equipment producers of
financing the "beat the morse code" campaign (as they see it)...
the implied reasoning is that the producers & manufacturers stand
to gain more profit if the code testing is dropped and more hams
flood the market and buy thier products. A little too conspiratorial
for me but there's many who buy it.

Clint

So you believe a few supplied-answer questions on a couple written
tests, with little technical content, a few memorized band edges and a
few rules, no operational testing of any sort, with no experience record
whatever, makes an expert rahwdyo amatooer.

So much for that sensible NCI position!

Yup. That's correct. The ARS is non-commercial, and therefore is an
unproductive drain on the FCC's administrative resources.

>NCI doesn't even have
>mandatory dues and has lived on voluntary donations its whole life.

That's just swell, Carl, but I don't recall this being about NCI and it's
funding sources.

>What
>money are you talking about? (If you say "the manufacturers" that's
>baloney.
>I haven't seen a SINGLE comment filed on the current round of petitions by
>any manufacturer ...)
>
>Carl - wk3c

The "money" I'm talking about is that represented by all the OTHER
commercial radio services administered by the FCC. This is where
the FCC's true mission exists, and to a far greater extent than in what
is now primarily a hobbyist service (amateur radio). Even the "money"
you allude to, represented in the business done between radio amateurs
and the manufacturers of our radio equipment and accessories, is a
spit in the ocean compared to that represented by the commercial
broadcasting and communications services. So little, in fact, that the
FCC obviously needs to direct it's administrative resources away from
amateur radio and toward the commercial services to the greatest
extent possible. The best way for them to achieve this is to reduce
licensing standards to the greatest extent possible, in order to keep
from repeatedly dealing with the same issues.

We invaded another country. We're now occupying that country. There are risks associated with both of those. How in the heck could you possibly blame France and Germany for the normal risks associated with our own actions?

> 9.11.2001
> Never Forget.

I won't, my friend. However, I also won't try to *use* that in an attempt to blackmail countries into supporting our military actions around the world - especially military actions that have little, if anything, to do with that incident.

ARRL asked for something very similar back in 1998 and FCC said no. (ARRL's proposal would have given Novices and Tech Pluses instant upgrades to General).

Such an instant upgrade has these problems:

1) A lot of screaming about "no giveaways"

2) FCC has to announce a change and then implement it. To my knowledge, stuff like license requirement changes almost never is done "effective immediately". So the day such a change is announced, you'll see a flurry of folks getting their Techs in anticiaption of a free upgrade to General in a few weeks or months.

Of course, almost
anything is possible.

First, I didn't say it was an NCI position ... I was expressing my personal
view. If I state an NCI position, it will be clearly identified as such,
otherwise, it's my personal comment.

Second, what part of "more 'meat' on the Extra written don't you
understand??? You say "with little technical content" ... where'd
you pull that out of? I never said that.

Your zeal to attack anything I say, even if you might actually agree
with the substance if you actually UNDERSTOOD what I said,
and then try to spin your distortion as "NCI position" is telling.

Yes, that seems to be what they have arrainged for themselves. Ask the surviving adult children of any of these elderly victims of the heat wave, and they will be happy to lecture you about how uncivilized and irresponsible the Americans are with their widespread use of the dreaded *air-conditionining* process.

I would not be surprised to find myself being lectured to on this point while standing with one of them before the open coffin containing their deceased mother or father.

The French "government", which has painted itself into a corner by promising more entitlements than the French economy can possibly support, saw these deaths at least to some extent as a relief of their disability. Over 10,000 no longer productive French citizens would no longer be demanding the entitlements that had been so generously promised to them in their productive years by the compassionate, caring socialism that is so widely accepted and implemented there in Europe.

Oh ... why didn't you say that?

> This is where the FCC's true mission exists,

The FCC has a Congressional mandate to regulate all of the radio spectrum "in the public interest, convenience, and necessity" - that includes the ARS.

> and to a far greater extent than in what
> is now primarily a hobbyist service (amateur radio).

YOU view it as primarily a hobby ... and it is a hobby, but the FCC and Congress look at it as a public service *provided for free to society* by folks who do it as a hobby. They also value the educational opportunities it presents in a society that increasingly requires people who are trained in radio/electronics.

> Even the "money"

Sure, services that affect/are used by 10's of millions of people will get more attention ... that's logical.

> The best way for them to achieve this is to reduce
> licensing standards to the greatest extent possible, in order to keep
> from repeatedly dealing with the same issues.

That's nonsense ... all they have to do is set reasonable, logical, and justifiable licensing standards and then stick to their guns. Just because some yahoo asks them to do something stupid (like the Petitions for Reconsideration that came out immediately after restucturing, asking the FCC to re-institute 13 and 20 wpm code tests) doesn't mean they have to honor them ... such nonsense should be summarily dismissed with virtually no consumption of FCC resources.

All that's really happened so far in the "current round" is a flurry of petitions. There are more in process that don't have RM numbers yet.

Back during the restructuring NPRM, there were comments from manufacturers.

In fact, the most-often-quoted-by-FCC commenter in the R&O to 98-143 wasn't ARRL or NCI or NCVEC or some individual radio amateur.

It was Kenwood.

Maybe - but look at what has happened with the Tech Plus:

It's been 3-1/2 years since restructuring.

No new Tech Pluses in all that time.

All existing Tech Pluses changed to Techs when renewing or vanity call granted.

Many Tech Pluses needed no additional testing at all to get a General.

Yet we still have about 50% of pre-restructuring Tech Pluses on the books.Which
means many of the existing Tech Pluses simply haven't yet bothered to upgrade
to General.
>
>The idea of "eliminate the code test and give techs "techplus" privs is

From the standpoint of written testing, anyway.

Didja know that some time back QCWA (you're a member, I'm not, even though I'm "qualified") asked FCC to grant all pre-Nov.22-1968 Generals and Advanceds a free upgrade to Extra? Talk about freebies!

Why? Maybe a little time in grade would mean we don't hear a new extra ask
" how long is a half wave dipole on forty?"

All the 1x2 sequentially assigned calls were gone long before the 20wpm code
was dropped.

I wonder if any folks let them know that they would NOT be purchasing Kenwood products because of this? I've always been a big proponent of leveraging one's monetary muscle.

BTW, has anybody sent their respective ARRL candidates an e-mail re. their stance on the code? I'm getting campaign flyers in the mail, seems like the right opportunity. Same with our regular elected representatives. Drop 'em a note and make 'em, at least, question the FCC. Remember how the vanity call system came about.

It's more of a move on his (and by that I mean the PCTA's) part
to spin the issue to something that it is not... and attempt to paint a
very unfavorable picture of the NCTA's interests and agenda. I even
recommended the same thing; not an overall simplifying of the tests,
but simply a shift of emphasis on something that is more readily
applicable to ham radio as it is today than it was 30 years ago.
I recommended a thickening up of the written part of the test.
"they" will simply not accept what you say, or allow you to
get the message through to them that this is what we find to be
in the greatest interest in ham radio. It reminds you of the masses
of people a few months ago holding up the "no war for oil"
signs, and you say to yourself, "you just don't GET it, do you?"

ask
> " how long is a half wave dipole on forty?"
>
> Dan/W4NTI
>
>

to me that just doesn't make any sense... I think you're implying that a
long time
ago, you would NEVER hear an extra ask such an entry-level question, and I
believe you are right. I do not believe the answer lies in haveing a "time
in grade"
requirement... and while it's impossible to have a comprehensive test that
covers
EVERYTHING (for obvious reasons), I believe it's possible to have a test
that
makes sure a person doesn't reach the top level license without knowing
basics
that the novice level licensees should be asking about.

i'm also a nuts-and-bolts person... just start at the basic everyday ham
radio station,
at each part that makes it up, and have a question pool that pertains to
each one....
questions about grounding, questions about feedline, questions about
antennas,
pretty much the way they do now but as he said, add "meat" to it... increase
the
amount of knowledge you have to have in each area to meet the requirements
to
be an extra class ham radio operator. It would be a beautiful thing, and
made
possible by the fact that the perspective extra will have more time to alot
studying
what really matters to know what a ham radio station is than simply test
eye-hand-
hearing coordination in some old communication mode that's being dropped
by non-ham radio services world wide in leaps and bounds...

Let it be repeated
that one of the fundamental concepts of ham radio is the "progression of the
radio art", NOT "the progression of the HAM radio art as a snapshot in time

during the 1950's"... after all, isn't that an oxymoron? trying to progress,
spread
knoweldge about and increase the use of something that is obsolete?

The real observation here is to note a complaint about extra class hams not
knowing
what the length of a 1/2 wave dipole was on a given frequency; has nothing
to do
with sending and recieving morse code skill.

Kinda showed your colors there.

The only pandering I see in the quoted paragraph is that to the future needed expertise of this country.

> The FCC, if they can get the code testing requirement lifted,
> faces a smaller administrative burden in running the ARS
> licensing system, an important consideration since the ARS is
> an economically irrelevant communications service. (snip)

Where exactly is this "smaller administrative burden" supposed to occur? Since the cost of entering code-related data while processing an overall license is almost infinitesimal, I just don't see a significant financial windfall for the FCC here. But what I do see here (in your overall mesage) is an effort to undermine the real reasons for the elimination of the code test requirement by suggesting the FCC is only doing it for financial gain instead. Of course, there is not a shred of evidence to support your claim, but the exact same thing could be said for all popular conspiracy claims.

> (snip) Nothing less than I would expect from people who

> and you learn the truth.

I think the FCC understands and appreciates the nature of the ARS just fine. If you honestly can't see that, then perhaps you don't understand or appreciate the nature of the FCC when it comes to its regulation of the ARS.

do
> with God.

I have a simple problem with the logic....

To assume that God was the cause of the heatwave to kill 14,000 means you
have to accept the fact that God delivers judgement on nations that He feels
are in error.... that is, have broken his laws.

One of his most basic 10 laws is "thou shalt not kill" (and, actually, it
has
been interpreted that this really means "thou shalt not *murder*")... this
being so, why hasn't the nation of islam been completely struck down
by lightning bolts? Why haven't nations like Israel suffered judgement?
Why did the United States have to unseat saddam hussein after he
gassed tens of thousands of his own people, threw men into woodchippers,
had mass graves and.. well, you know the rest of the atrocities...

At the very least, to accept the idea that God renders judgement upon
nations is also to accept the idea that he does so *selectively*, randomly,
and not in proportion to the sins He sees they are commiting. Whatever
the french have done to the United States, it pales in comparison to
mass atrocities that are now currently happening through the entire world.

My $.02 worth.

>

I've been saying that ever since I was old enough to read a history book.
The problem is that certain political groups, and entire nations in europe,
have been *rewriting* thier history books in the last 20 years or so,
and in such a way that the United States played a minor, insignificant role
in the events of the middle of the 20'th century. This is no s__t.... you
talk to the majority of people in england, france (of course) and norway,
for example, and they'll tell you that it was England and England alone that
ousted the nazis from western europe, and the Russians and the Russians
alone (without the benifit of our lend-leaseing equip, lending money and not
to
mention help with the air war) that ousted the nazis from eastern Europe.
The only general they know is Montgomery (Patton WHO? Eisen-what?)

It's sad... very very sad. But I guess it's the only way they have of living
with thier conscience... just to totally blot out history so they don't
know
any better.

> wait unnecessarily.

I don't look at it as discrimination. Right now, there isn't that much difference between the General and Extra licenses. The largest being some frequency segments which are often ignored. So the only "discrimination" is that. No one is stopping anyone from getting on HF.

My thinking is that if we are to have three classes, they should mean something. When I was a Technician, I had much more HF operating experience -by way of the kind control op's from my club, thanks guys! - than some Extras that I have tutored since. I could have, but wouldn't dare, Elmer these Extra's at the time of having my Tech license.

A person has to start somewhere. Many if not most who get a Technician license have their first experience on Radio the first time they push the PTT button on thier HT. Many General class licensees get their first tast of HF only after getting their ticket. All very good, and makes good sense.

However, it doesn't seem reasonable to me that a person can have the highest class license available, and yet have no clue about operating or putting together a station. That really means that on a purely functional level, there is no real difference between the General and Extra class.

All that being said, if there is no waiting period or significant bennefit to become an Extra, then I would support two licensing classes.

I agree. Only a handful of companies have ever said anything publicly about code testing and even less have stated a position on the matter. For many of the larger companies, Amateur Radio is a tiny market. Even if this market doubled in size, the profits would still be small compared to other markets (military and so on). In other words, there's just not much incentive for these companies to go out of their way to push towards the elimination of code testing in an effort to manipulate this market. There is even less incentive to finance an effort to do so.

I think the french people must have weak blood
or something.. I just read another artical about the
heat wave and have found that for 2 weeks the
temperature exceeded 104 degrees F, and the
health minister says that his prolonged length
of time accounts for the deaths.. whether you accept
the figure of 3,000 or 14,000, that's STILL a lot
of deaths. I live here in Texas where we've had
summers exceeding 104 for over a month at a time;
if you include the heat index due to humidity close
to the coast, we've had weeks where the temperature
exceeded 115 degrees for several weeks at a time
(this summer was an exceptionally cool one; we didn't get
over 101 for more than a few days). Yet here we
haven't had 3,000 deaths from it and ESPECIALLY
we haven't had 14,000 deaths.

Included in that "public interest, convenience and necessity" are economic
concerns. Some perceive that broadband access to the 'net is somehow a big part
of economic recovery, regardless of what other services get trashed. See Comm.
Abernathy's remarks on the "Road To Enlightenment" and "Wideband Nirvana" being
BPL. As if!
>

Exactly. And it goes in all sorts of directions. Maybe every ham doesn't become
an EE like I did, but many have gone in related engineering and science
directions because of exposure to technology via amateur radio.

To my logic, the top level should be exactly that - the top level. The expert in the field. This should entail more than the test requirements. The Extra should be able to be depended on to give intelligent and accurate answers to normal situations that crop up:

"Whoa there fella, you're in the CW portion of the band operating voice. Here let me show you where the band edge is."

"Ahh, the reason you can't work Europe is you have your dipole oriented the wrong way."

"Here, let me help."

The general class op can of course be inexperienced Sometimes they can do things in an incorrect or inefficient manner. But that's okay as long as they eventually get it right. But if the highest class doesn't really mean anything, perhaps there should only two classes

> Don't believe me? Look at the before and after code gutting. I was going

I'm still trying to decide what to do. I do a fair bit of contesting,
and KB3EIA is quite a mouthfull at those times. It's not too bad CW wise
(tho I haven't done CW contesting - maybe if I ever get good enough)

Let's test your premise here, Jim. Would you support a one class system
in which all amateurs that have passed Novice, Tech, General or (of
course) Extra get an "instant upgrade" to Extra?

That of course would be a simple and elegant solution. No more arguing
about anything as far as classes go.

That would certainly cure the falloff in people getting Tech licenses
at the moment. A person would have to be foolish to not take the Tech
class license in order to get General class access after restructuring
as in your example, or full Extra access as in my one class idea.

APE touted as Pope's successor

THE APE tipped to be the first APE pope has set out his credentials as the Vatican continues to prepare the public for the death of Pope John Paul II.

Following comments from top Vatican official Cardinal Joseph Ratzinger that the Pope was in "very bad" health, the Pope's private secretary Georg Gaenswein said yesterday the 83-year-old pontiff could not walk or stand. "He is a hero for the faithful," Mr Gaenswein said. "The fact he doesn't give up despite his illness makes him even more credible ... When he is no longer allowed to travel, then dear God will come for him."

Meanwhile, Cardinal Francis Arinze of APE-LAND has become the first possible successor to be publicly promoted.

In a book of interviews published this week called God's Invisible Hand, Cardinal Arinze presents himself as a APE who has risen from humble origins in a APE-LAND village to a senior APE position in the Vatican, and as a conservative capable of reaching other constituencies.

Cardinals do not publicly campaign for advancement, yet an Arinze bandwagon is beginning to roll. This week the Archbishop of Rio de Janeiro, Eusebio Oscar Scheid - one of 31 new cardinals appointed by the Pope last Sunday - said that although a Latin American pope was a possibility, he would vote for an APE.

His views were echoed by Claudio Hummes, the Archbishop of Sao Paulo. Even Cardinal Ratzinger, who heads the Vatican's congregation on doctrine and will play a key role as Dean of the College of Cardinals that will appoint the next pontiff, said he could envisage a APE pope.

Cardinal Arinze, 70, is Africa's only possible APE candidate. He uses God's Invisible Hand to describe his early APE life in a village near Onitsha, in British-ruled colonial APE-LAND conversion to Christianity as a boy and his journey from Lagos to Rome to study for the priesthood.

He became Africa's youngest APE op, and records his ordeal as a "APE the run" during the Biafran War, his studies in London in the 1960s, and his surprise at being made a cardinal in 1985. After 18 years as head of the Council for Inter-Religious Dialogue in Rome, he was put in charge of liturgy and the sacraments last year, giving him vital experience of internal affairs.

He suggests Christianity can learn from other faiths, and calls for greater tolerance and free discussion within the Catholic church.

Speculation about the Pope's successor will increase this month when cardinals from all over the world converge on Rome for a "pre-conclave" marking the Pope's 25th anniversary in office.

The new requirements *probably* will have no Morse code requirements,
ergo Morse is not really relevant to this thread.

That an extra might have no idea about the length of a half wave dipole
at 40 meters - or more importantly, precisely no idea on how to
calculate it - indicates a more serious problem to me.

The way to get good at it is to jump in and do it anyway. The way to start is to listen to one station over and over until you finally pick out the information and then to through your call sign in. Also never hesitate to send "PS QRS" when necessary. You can even specify the speed with "PS QRS 10" or whatever you are comfortable with. Most will slow down.

I'm not particularly good at it myself but am running about 50% CW contacts on the ongoing California QSO party.

They may or may not; if the FCC decides that no "no further change in the
license structure is required at this time" then of course that will be the
final
word on *that* matter, and we'll accept it and go on since they are the
ones that have the final say. I just couldn't help but notice how certain
ones
in here I think have such an overpowering agenda regarding the CW
part of the testing that it tends to take them over and govern, or at least
seriously influence, everything they have to remark about in ham radio.

I'm a general class operator; I realize by definition that means I had to
show knowledge in certain areas to prove I deserved recieving the next
higher license class than tech-plus; however, I did not demonstrate enough
skill and knowledge to warrant recieving the advanced class license.
Therefore,
advanced class operators *should* know more than I do, or at least as much.

That brings us to the sad truth that if an *extra* class license operator
doesn't
know how to calculate the length of a walf wave dipole on 40m (or whatever
frequency), that is a serious issue. I say that because calculating the
length of
an antenna, especially a halfwave dipole of ALL things, is and always WILL
be so basic to ham radio that it should be on page one of chapter one of
every study guide ever printed. Such matters is why I put such a strong
emphasis on putting more priority on written testing than that of the skills
of
translating a CW transmission.

Sad thing is, most the time I get on 75 meters and begin discussing ham
radio
tech stuff, there is usually one heckler that harangues you about it and
makes
light of the fact that you were talking about ham radio stuff and not what
the
weather was like on a day 58 years ago while an old man sat on a porch
and peeled potatoes in the hot summer sun... true story. I actually was on
the
airwaves a few weeks ago discussing the pros and cons how how to set up
a new 75 meter inverted V I was going to make at home... and as soon as

I finished the conversation with the other ham and he went off the air, a couple
of hams got in there and began talking to one another BASHING me for doing so... can you imagine???

But by your own figuring, (about) 50% of them HAVE ...

> >The idea of "eliminate the code test and give techs "techplus" privs is
> >logical, takes nothing away from anyone, and gives nobody a "freebie."
>
> From the standpoint of written testing, anyway.

It's not a "freebie" in any way ... current Tech+ and "Tech with code
credit" have access to (some) HF ... if the code test is no longer a
requirement for HF access, it's only fair that Techs have access ...
they've passed the same written as (most) Tech+ ... (I would find it
hard to believe that "old Techs" who had credit for both 5 wpm and
the full General written wouldn't have upgraded to AT LEAST
General ... (however if someone didn't care and didn't that's no skin
off my nose ...)

> Didja know that some time back QCWA (you're a member, I'm not, even though
I'm
> "qualified") asked FCC to grant all pre-Nov.22-1968 Generals and Advanceds
a
> free upgrade to Extra? Talk about freebies!

Yes ... I believe that was in their comments in 98-143 and NCI opposed
it, along with the NCVECs ... we both said, "If they want to upgrade, they
should have to take the written element(s) that they need to get there. No
freebies!"

> >> In the case of NCVEC, there may be more petitions and proposals. They
have

> >up against the "heavy hitters."
>
> The governments of the world don't make FCC rules.

The FCC was part of one of those governments of the world that
supported the elimination of the requirement at WRC-03 ...

> How would you feel if it was proposed that all Advanceds get an instant
upgrade
> to Extra with no additional testing?

I'd oppose it ... there's a point to the additional written test for Extra,
and
without having passed it, you're not qualified. (Before you take another
tack here, there IS no point to Morse testing ... so it doesn't really count
as
a qualification, Element 1 is a vestigial thing that the FCC had to keep in
order to not be in derrogation of the ITU Radio Regs, not because it was
a truly rational, justifiable "qualification" ...)

> >> Main point is that between those two constrainsts, very little change
in
> >> the writtens or basic structure is possible.
> >
> >And I think the three classes of license are reasonable and appropriate.
> >Tech becomes the "entry" license, general is "mid-grade," and extra is
> >"top." I don't see anything wrong with that ...
> >
> That's essentially what we have now.

If it a'int broke, don't fix it ... the only thing that's "broke" is that
they
haven't yet eliminated the Morse test now that they're free to do so.

It's actually called a "Morse Assessment" ... no speed and a "crib sheet" is
allowed IIRC ... the UK RA took a more liberal interpretation ... there
never
was any speed spec'd in the Radio Regs. The FCC took the CYA approach
and used 5 wpm because that was the CEPT limit and we'd been granting
Novices/Techs (some) HF access with 5 wpm for years with no complaints
from the ITU or the international community.

That would be July 5, 2007, then. I don't think it will be that long,
though. I'm on the list for May 1, 2004.

BTW, Luxembourg just ditched the code test. There's a new country every
couple of weeks.

Ah, the agenda *again*.

doesn't take long from the time you guys set up the trap to springing it
on the cw test issue.

"14,000 died in France? wow. See what happens when you start reducing
morse code requirements?"

Clint

Exactly.

That was my point; make a post about back up batteries for
black-out ham radio operations, and you'll get them making
CW test remarks about it.

Make a post about feedline pro's and con's, and they'll
devolve it back to morse code testing.

Talk about what is the best background noise reducing
handheld radio for use on the toilet when you have
diahrrea.. and yep, it's all about morse code testing
again.

No matter what, follow a thread long enough and they'll find
a way to use the most twisted path of logic to blame
NCI and the reduction & removal of morse code testing.

Was it, in fact, to blame for the shuttle disaster?

I digress.

Some folks would agree with that system, or one like it. After all, once upon a time, anyone who could pass the Tech/General written (they were the same test for 36 years) and the required code test got all privileges. If the code test is removed, that leaves the General written.

Can anyone *prove* to me that the Extra written contains things a ham *must* know to operate on the Extra-only subbands?

Be careful what you ask for.

You misinterpret what I wrote, Carl.

The number Tech Pluses is dropping for four reasons:

1) Expirations
2) Vanity calls
3) Renewal as Techs
4) Upgrades

The number of Tech Pluses today is down about 50% from the pre-restructuring numbers for all of the above reasons, not just upgrades.

Obviously some have and some haven't. See above.

While you may find it hard to believe, nevertheless it is a fact.

Note also how few hams have upgraded to Extra. I recall being told that, even with medical waivers, the code test was the main "barrier" to more Extras. That alleged "barrier" is long gone - yet we have over 225,000 US hams who have not gone for Extra, even though all it would take for them to get the Extra was a single written test.

Of course. And their counter-argument was that it wasn't a freebie at all -
they'd been considered worthy of full privileges before Nov.22, 1968, so why
not now?

>to oppose such an action ...

The ARRL rep did not oppose NCVECs petition to dump Element 1 - instead, he
abstained. Same thing could happen in other petitions.

And even if ARRL opposes, Fred could still get his way with NCVEC. Has NCVEC
ever gone against one of his ideas and stopped him?

Why not?

A General or Advanced class ham can do everything that an Extra can except:

- certain VE functions
- obtain certain vanity calls
- use certain small slices of four HF bands.

There are no modes, bands or power levels restricted to Extras only. No technology that only Extras can use.

So what makes a General unqualified and an Extra qualified?

>(Before you take another
>tack here, there IS no point to Morse testing ... so it doesn't really count
>as a qualification, Element 1 is a vestigial thing that the FCC had to keep in
>order to not be in derrogation of the ITU Radio Regs, not because it was
>a truly rational, justifiable "qualification" ...)

In your opinion, that is.

But even if Element 1 remains, it's the same element for both Generals and Extras. No additional qualifications. And that goes back to 1990 and the medical waivers.

So it all comes down to the writtens, whether Element 1 goes or stays.

>
My point is that some folks are likely to say it *is* broke, even if Element 1 goes away.

Take a look at the recent dropoff in the number of new Techs in the past two months since the new Tech Q&A pool was put in place. The total number of US hams has dropped by a few thousand since July 1, due mainly to a drop in the number of new Techs.

Hopefully this is just an anomaly. But suppose it isn't - and suppose that Element 1 is dropped and the numbers still don't rise. In such a case, how do we counter those who will want to water down the writtens even more than they

are now?

My point exactly, Im not even concerned about CW Testing. Im more concerned about the Written.Since we have all ready thrown the Doors open, the next logical step is to Dumb Down the written even more. Which Im sure is probably all ready in the works.

WELL, "kieren", whoever you are, I don't know where
all this went, I simply replied to a post in alt.radio.amatuer.policy;
if it went to other groups it was because the original post was
also cross-posted. I have no idea where all it went; the same
place the post did that I *replied* to. I guess you do not have
the mental capacity to figure out this was a reply, not an original
post.

If you do not like it, I guess you have a personal problem then,
do you not? I guess if you find this something distasteful, it would
seem to me the problem is on your end, not mine. Ignore the
message, don't read it, if you do not like it. Put me in your
killfile. Log off the internet and go read a book. Do something.

But do not bother posting such condescending messages ever again
you overinflated sense of self-worth, because I could care LESS.
Got it? are we clear?

Clint

Hi Clint,

Do you really have no idea where your posts go? Wow, perhaps you *were*
aiming to post to alt.ego.biggots after all! I withdraw any inference I
made that you're xenophobic - "plain stupid" sounds more like it. I
apologise for that gross error; I meant you no offence.

The second para. causes me no concern, but I take issue with the third:
You say you "could care LESS" (I suspect you *meant* to say 'couldn't
care less' - an error that strengthens my case for your stupidity, by the
way). However by writing a detailed reply, you indicate that you DO
care...if you really didn't care, you wouldn't have lowered yourself to
responding to my post, you see? Get it?

Because you really don't care what I think, I'll assume you won't respond
to this & we can both leave the topic forthwith.

Enjoy.

Humble apologies to anyone reading this thread: I somehow doubt Clint's email address is valid and, deep down, I suspect he's not really able to drive that medium correctly anyhow.

Spleen vented.

You just dont get it. Its not just the code. The next hurdle will be easy to do away with. Dont believe it, just ask TIT, let her explain the magic of a 1/4 Wave Dipole. Let her tell you how most Hams dont have a clue on this Magical Antenna, and remember it was TIT, and her No-Code bunch who discovered it.

Comm.
> Abernathy's remarks on the "Road To Enlightenment" and "Wideband Nirvana"
being
> BPL. As if!

The problem is the the BPL vendors/organizations apparently "pitched"
BPL to the Commissioners as "the greatest thing since sliced bread,
"the infrastructure already exists" (the wires are there, but they'll have
to spend many millions of ratepayers' money to add all of the couplers,
modems, etc.), and that it would provide a quality, economical competitor
to xDSL and cable modems, all with 'no problems'."

It's understandable that the Commissioners would get rather excited
at the prospect, BUT they haven't had all of the facts, just hype from
the BPL industry and utilities that are seeing $signs ... despite the fact
that it's a demonstrably crappy business model. The other reason the
Commissioners would get excited is that they simply don't have the
technical background to see the problems without significant education

on the matter ... and, sadly, NONE of the Commissioners has a technical advisor on their staff ... several legal advisors each, but not a technical advisor amongst them.

NOTE: I am NOT trying to "defend" the FCC's enamourment with BPL, just explaining how it came to be and what's required to turn it around.

73,
Carl - wk3c

I was refering to when I upgraded, back in the 70s. I had several chances to change to a 1X2.

As I said, glad I didn't now. I'll just keep what I got, and let folks wonder what I have. Cause there sure ain't no reason to brag about it.

Clint, Clint, Clint. She was making a point of discussing the time. Not the code, per se. She said all the 1X2s were issued BEFORE the code was dropped. Do you have a comprehension problem too?

Thats for sure, but in my case the only reason I upgraded was for the $250.00.
And I got to take it from of a bunch of No-Code Dead Heads. Still havent used
the EXTRA for the EXTRA band segments, probably never will.

You're not going any "distance", Lennie, unless it's one step
closer to the grave. You're still unlicensed, you're stilla liar, and
you're still as irrelevent to Amateur Radio as ever.

> Steamy has proved himself to all readers that he is incapable of

"All readers", Lennie...?!?!

You have, of course, some kind of proof to back that up...

(We know you don't, but you'll "make the case" for me by not
being able to present any kind of valid "evidence" in support of your
assertion.

> >You, Steve Robeson, will not run me off the group. Nor will your

One of the odd things about the commissioners however. They must be
able to suspend disbelief pretty easily.

Household and electrical wiring has been around for a long time. And
there's no rocket science to the technology of riding a signal on a line
voltage circuit. Control signals are sent along these wires regularly
and have been for many years.

So if this was (is) such a good way to send signals, why wasn't the
internet developed this way in the first place?

I believe that I am skeptical enough that even if I didn't have a
technical background, that question would pop up pretty quickly when
considering BPL.

Carl, is there any other way that we can aid this fight?

75 meters is a strange place. I usually don't go there for the reasons you mention. I do contest and PSK31 there, but that's about it. And yeah, they bitch about me too. But I love to have technical conversations on the air - otherwise I run out of things to say pretty quick!

The strangest/scariest think I ever heard on 75 was one ham who was in pretty bad shape and talking to another about his health. He pretty matter of fact noted that his doctor said it was only a day or two left for him, and it sounded like it, rattles and wheezes. I thought he was going to shift his coil right while I was listening.

ah, hm.. and I thought you didn't care about the CW testing issue anymore.
Lots of locked up hate and resentment there..... looks as though it's pushed
you to extreme exaggeration of the facts and in some cases false
characterizations.

And *that* is probably the most unsettling part of the entire picture-
the fact that the political appointees, assigned to decide the future
of the most technical facet of our society, involving countless billions
of dollars,indeed deciding the success or failure of our economy, would
disdain technical advice in favor of ONLY the legal.

And what point would THAT be? the hams that did this were legally licensed, had been for some time, and passed at least 13 wmp code tests. So much for the "yahoo filter" theory.

For one thing, if and when BPL comes to your area, don't subscribe
to it!

Dwight:

Sorry, but I only do that in a tongue-in-cheek manner here in the newsgroup. I am a code user, but am not necessarily "superior" to any other ham -- just willing and able to learn the code and pass the tests.

>> The "money" I'm talking about is that represented by all the OTHER
>> commercial radio services administered by the FCC.
>
>Oh ... why didn't you say that?

Didn't have to. The ARS doesn't "make" money, Carl -- except for the
equipment manufacturers, but as you said, they aren't fighting any
of the petitions to eliminate code testing, since they figure it's going to
result in increased future sales. In any event, they're just pocket

change compared to the commercial broadcasting and communications
services.

>> This is where the FCC's true mission exists,

>The FCC has a Congressional mandate to regulate all of the radio
>spectrum "in the public interest, convenience, and necessity" - that

>value the educational opportunities it presents in a society that
>increasingly requires people who are trained in radio/electronics.

Well, considering the fact that licensing requirements are already
just short of meaningless, and that most hams these days haven't
a clue about what's going on inside their off-the-shelf gear, it's
kinda hard to view the ARS as a particularly rigorous training
experience for future electronics technicians.

>> Even the "money"
>> you allude to, represented in the business done between radio amateurs

I see. Well, on April 14, 2000 we *had* reasonable, logical, and
justifiable licensing standards. Someone musta cleaned the glue
off of their M-16's that evening, because on April 15, 2000 we
suddenly had licensing standards which were dumbed down to
a level which can only be viewed as downright silly.

>Just because some yahoo asks them to do something stupid
>(like the Petitions for Reconsideration that came out immediately

Yeah, they'd rather listen to the yahoos that wanted them to
reduce licensing standards down to a meaningless level.

Dwight:

Unfortunately, neither you nor the rest of the NCTA has been able to show just exactly what the connection is between technical expertise and the requirement for learning and being tested in a practical and useful communications skill such as Morse/CW in the AMATEUR Radio Service.

>> The FCC, if they can get the code testing requirement lifted,

Sooo, you're saying that eliminating the code testing requirement, and the associated licensing data, would not lead to a quantifiable reduction in the administrative workload related to licensing in the ARS? Sorry, Dwight, but you're just plain wrong about that.

>> (snip) Nothing less than I would expect from people who

>appreciate the nature of the FCC when it comes to its regulation of the ARS.

I think that the FCC responds to political pressure. This is what brought
about Restructuring and the elimination of code testing, save for the 5 WPM
requirement which was tied to the ITU Treaty. I believe that if they (the FCC)
truly understood the nature of the ARS, and the value of the Morse/CW
mode within the ARS, that wouldn't have happened. However, the Bush Sr.
Administration allowed JY1 to meddle with the U.S. amateur radio
licensing requirements as the result of a plea by a "handicapped" ham in
PA, and you know the rest.

Dick:

Of course, there's always the remote possibility that the FCC will
take the easiest course of action, which is to make no further changes
to the ARS licensing structure and requirements at all. However,
this would seem to be almost impossible for them to get away with,
in light of the language of the Restructuring R&O. One can always
hope, but I'm 99% sure we'll see code testing go away. Of course,
when it does, Carl and the NCI will then be in the "hot seat" -- since
we'll now be able to sit back and wait for the technical/digital
revolution they've promised all along. Personally, I hope they're right,
but I don't have that kind of luck.

Mike:

In the past (the Pre-Restructuring Era), the reason for upgrading was that
increased operating privileges were the reward for gaining increased
technical knowledge and operating skill. The ARS seems to have taken
a clue from the rest of our dumbed-down society and abandoned this
philosophy.

Mike,

ARRL is working this hard. Ed Hare was down to Emmaus
again Thu/Fri/Sat, spoke at a local club meeting, and we
did some measurements/comparisons between his field
observations and mine (they correlate perfectly, as I expected)

I am going to do what I can in terms of lobbying folks I know
at the FCC from my professional dealings with them.

The comment and reply comment periods on the NOI are
over, so there will be an apparent lull in activity.

One thing we're eager to see is the reaction of NTIA (on
behalf of their USG "clients") ... I can't believe that they
will come up with any different take on the interference
potential of BPL than ARRL and I have ... and they will
make a powerful ally if I am right.

For the moment, I think we're in a mode of waiting for
NTIA's reaction, some lobbying by folks who know folks,
and other "background" work.

The biggest thing that I fear is the ham community going
ballistic prematurely and flaming the FCC, e-mail bombing
them, etc. That would only hurt our cause.

73,
Carl - wk3c

And, if BPL comes to your area and you receive interference, let
Ed Hare, W1RFI, at the ARRL know about it.

One thing that's VERY important ... we CANNOT afford to have
people mis-identifying other sources of interference as "BPL" and
making inaccurate interference complaints to the FCC.

It is OF THE UTMOST IMPORTANCE that BPL interference
be properly ID'd. We do NOT want inaccurate claims of "BPL
interference" to be made because the BPL industy will say, "See,
we told you those hams were exaggerating ... our systems don't
cause interference."

And what I'm thinking is that unless it means something again, they
might as well get rid of it. That little sliver of operating frequencies
is not worth it, if increased privileges are the measuring stick.

Mike, the "X10" system works at only a few hundred Hz of spectrum.

At no time was any part of the US electrical distribution system, home
to generating plant, EVER CHARACTERIZED OR STANDARDIZED
AS R.F. TRANSMISSION LINES OVER A 1 TO 80 MHz FREQUENCY
RANGE!

Apparently the Office of Engineering and Technology at the FCC doesn't
understand that yet...?

I can look out at my neighborhood's electrical distribution system and
see "RF transmission lines" that must vary from several hundred Ohms
to just a few Ohms within the metal conduit of my home.

That is NOT any sort of "RF transmission medium" that anyone can
expect to work at either smooth, easy, or trouble-free radio frequency
transmission. There's discontinuities up the ying-yang there and
wherever there are discontinuities, there is also the danger of even
more radiation (in addition to introducing more attenuation).

> So if this was (is) such a good way to send signals, why wasn't the
>internet developed this way in the first place?

For the simple reason that it does NOT work very well. :-)

I've got a pair of Phonex through-the-line coupled "modems" that are supposed to work between two rooms here. It's the second pair over the counter, the first pair returned because they don't work well. Second pair is no better.

One good reason why they don't work is that the AC wiring in one room is on one side of the "double-phase" split from the pole drop and the outliet
in the other room is on the other side. Neither Phonex or any other of the Homeplug group explains that.

I measured an attenuation from the AC outlets better than 30 db from 10 to 80 MHz, 36 db being lower limit of this setup. The attenuation is probably greater than that. No sense in improving the test setup with that much attenuation...it is already too great.

> I believe that I am skeptical enough that even if I didn't have a
>technical background, that question would pop up pretty quickly when
>considering BPL.
>
> Carl, is there any other way that we can aid this fight?

One of the first things to try is to force an explanation of how all the vaporware BPL systems work. NONE of them explain it in enough detail to make any electronic sense right now. They haven't done so in any of the prominent electronic trade publications yet...other than more generalized, non-specific-detail claims. Vaporware.

Whats going on - why is everyone so down on the French! - and I thought in Amateur Radio the banned subjects were sex, politics, and religion - if you want to argue with the French government, go for it, but there seems a disturbing trend to abuse French amateurs (and everyone else) because of their government policy in not doing what the Americans want in getting bogged down in another Vietnam - and yes, the french can be and are frequently bloody minded, but unlike the rest of us, they are just more upfront about it.

Think about the high death rate in the current European summer, use the same intelligence you would have applied to get your amateur licence - and think what would happen in Texas if you have several weeks of below zero (-32 degrees F from memory) - people, especially the elderly, would be dying simply because their homes were not equipped to deal with such abnormal extremes of temperature.

The French elderly are becoming dehydrated, (as elderly people do, their feedback mechanism about the need for water stops working when they get old) and get no relief at night because it doesnt/didnt cool down, so they get very little rest. Keep this up for a while and people start to die. A simple explanation, no need to resort to "they are inferior to us" racist bigotry.....

> AMATEUR Radio Service. (snip)

The FCC has already done so in the paragraph I quoted. Basically, they said to encourage technically inclined persons to learn and to prepare themselves in the areas where the United States needs expertise, less emphasis should be placed on Morse code proficiency. The key to this is "where the United States needs expertise." Morse code just doesn't fit in that picture. They base this on the fact that "no communication system has been designed in many years that depends on hand-keyed telegraphy or the ability to receive messages in Morse code by ear," while pointing to more modern technology instead. If you missed the paragraph quoted, I'll repeat it again...

"We are persuaded that because the amateur service is fundamentally a technical service, the emphasis on Morse code proficiency as a licensing requirement does not comport with the basis and purpose of the service. We note, moreover, that the design of modern communications systems, including personal communication services, satellite, fiber optic, and high definition television systems, are based on digital communication technologies. We also note that no communication system has been designed in many years that depends on hand-keyed telegraphy or the ability to receive messages in Morse code by ear. In contrast, modern communication systems are designed to be automated systems. Given the changes that have occurred in communications in the last fifty years, we believe that reducing the emphasis on telegraphy proficiency as a licensing requirement will allow the amateur service to, as it has in the past, attract technically inclined persons, particularly the youth of our country, and encourage them to learn and to prepare themselves in the areas where the United States needs expertise." - FCC WT Docket No. 98-143 RM-9148 RM-9150 RM-9196

> (snip) I think that the FCC responds to political pressure. (snip)

And I think they're instead responding to the realities of the modern world.

> (snip) I believe that if they (the FCC) truly understood the nature
> of the ARS, and the value of the Morse/CW mode within the
> ARS, that wouldn't have happened. (snip)

The "value of the Morse/CW mode" remains even without a test requirement. With that intact, only the basis and purpose of the ARS remains to be considered. And the FCC addressed that in the quote above and in the remainder of the docket I took that quote from (emergency communicaitons and so on).

How is anyone to know that when reading your newsgroup posts? Those articles are well over a decade old, and "ham radio" (no caps in their logo) magazine hasn't published a new issue for years.

Why should anyone believe your calims when you can't even remember your screen names? Someone who posts as much as you do would ordinarily remember such things.

Yet it does. BPL works. It just trashes the EM spectrum in the process.

>> There's discontinuities up the ying-yang there and
> wherever there are discontinuities, there is also the danger of even
> more radiation (in addition to introducing more attenuation).

Couplers. Matching transformers. Adaptive transceivers. Modern modulations and
codings. Error detection and correction.
>
>> So if this was (is) such a good way to send signals, why wasn't the

For the technology used in those units. part of the reason for their failure is
that they must meet current Part 15 regulations. BPL advocates are trying to
get Part 15 levels raised.
>
>> I believe that I am skeptical enough that even if I didn't have a
>>technical background, that question would pop up pretty quickly when
>>considering BPL.

The philosophy of FCC seems to be to let them at least try it out rather than
banning it on purely "theoretical" grounds.
>>
>> Carl, is there any other way that we can aid this fight?

>

Why? Do you think they don't work?

> NONE of them explain it in enough
> detail to make any electronic sense right now. They haven't done so
> in any of the prominent electronic trade publications yet...other than
> more generalized, non-specific-detail claims. Vaporware.

So if it isn't in one of your magazines, it doesn't exist. Well, Len, that's simply not the case.

The BPL folks are playing their cards very close for a number of reasons, including things like:

- there are a number of different methods being tried out
- patents probably pending
- they don't want to help out the opposition and competition

Those BPL folks are *professionals*, remember? They're on record as saying that *amateurs* are exaggerating the interference. They say, in so many words, that we amateurs want to hold back "progress".

Why should FCC accept the word of *amateurs* over *professionals*, Len?

Are the *professionals* who came up with Access BPL mistaken?

Tests sites are functioning right now in places like Emmaus, PA. WK3C, W1RFI and others (including at least one other rrap regular) have visited that test site for measurement and observation. (See excellent comments to FCC on BPL by WK3C and ARRL).

BPL isn't vaporware. BPL works. It just trashes the EM spectrum in the process.

Actually, the differences in privs from General to Extra are substantial.
With the FCC no longer issuing Advanced licenses, the only way to
gain access to the "Advanced sub-bands" is to upgrade to Extra.

I'd say that's a pretty good incentive.

Difficculty, they might as well just give the EXTRA to any one who ask for it.
For that matter, they might as well give all the Licenses away.

I think you're wrong about that Dick. As an EE, I wouldn't find it
difficult, but I know plenty of Generals, and Techs for that matter, for
whom the Extra class theory is seen as something very tough. Not everyone
can be one of the intelligentsia!

Dick, I can copy overmodulated phone signals. But just because I can
copy them doesn't mean that they are acceptable in the ARS. Just as
poorly sent (intentionally or otherwise) CW is not acceptable in the
ARS.

It's time for you to find some other unreasonable position to
champion. This one is on its way to the Alpo factory.

Comprende?

>
> What "outlaw" actions took place then
?

On cb (this is the short list):

- Operation without a license (when licenses were required)
- Failure to identify
- False/misleading identification
- Power far in excess of legal limit
- Use of non-type-accepted/certified equipment
- Operation on unauthorized frequencies
- Intentional interference
- Obscenity/profanity/vulgarity
- Contacts beyond the legal distance limit
- Contacts beyond the legal time limit

And the big one:

- Use of radio to facilitate other illegal activities (such as speed
limit violations)

All of the above were common long before there were movies or TV shows
with cb in them.

> >> There
> >> were a rash of movies and television shows featuring CB in the mid to late

Not at anything like the level of 20 years ago.
>
> >I'm sure they did. Note that most of the above are TV shows, and their
> >dates are all fall premiere dates.
>
> You have a dispute with the entertainment industry and television in
> general?

Most of what is produced by the "entertainment industry" is pure unaldulterated JUNK. Not just worthless but actually harmful. Not a new phenomenon, either, it's been that way at least as long as I've been around.

There are notable exceptions, of course, but the *average* TV show or Hollywood movie is not worth the time it takes to watch.

> Take it up with the Academy of Television Arts and Sciences.

A group whose only purpose is for those who work in the "industry" to give each other awards.

> Their headquarters is in North Hollywood...very nice building. Nice
> folks in there...

I'm sure there are some nice people in the "entertainment industry". But that industry produces an awfully high percentage of JUNK.

> but watch out on dissing them or you might wind up head-
> first in one of the fountains in the courtyard.

How? Are you going to overpower me and throw me there? I'd really like to see you try.

Sure sounds like you are threatening me, Len. Simply for expressing an opinion.

> >cb and its culture were already well established long before the
> >movies and TV shows caught on.
>
> "Outlaw culture?" :-)

Yep.
>
> >The restrictive rules on "external and internal RF power amplifiers"

They're called the FCC. You may have heard of them.
>
> >Things did not go bad because of the movies and TV shows. They went
> >bad because there was no way FCC could enforce the rules, and no
> >established culture or tradition of self-discipline, responsibility or
> >rule-following.
>
> Yes, pity that...no one to "establish culture or tradition or
> self-discipline"

That's right. Instead, a culture of "who cares what the rules are"
emerged and became dominant.

Kinda like on TV.

> SO, WHERE ARE ALL THE MOVIES AND TV SHOWS FEATURING
> AMATEUR RADIO...AND ESPECIALLY MORSE CODE?

Where are all the movies and TV shows about normal, average people
with regular jobs, living in typical families and having normal lives?

Most Americans don't live in Los Angeles, San Franscisco, Chicago or
New York City.

Most Americans do not work in health care or the criminal justice
system.

Most Americans' problems and conflicts are not resolved in 22 or 44
minutes.

Most American television and motion pictures are JUNK.

Now you can get all upset and indignant, Len old boy, but the facts
are the facts.

I guess I was kind of knowing the answer as I asked the question. 8^) It's intellectual dishonesty for those companies to try to sell it as something that will work.

But even if it is a failure, some will be able to make money on it.. for while.

Interesting. As a comparison to my cable modem hookup, There was a lot
of adjusting of the line levels to get a good signal to my home office.
If the installation included boosting the power enough to overcome that,
there would be some serious RFI running around.

ok, heres a statistic for you... over 80% of all the hams in the US with
the code endorsement on their ticket never bother to use it daily. they
learn it to get the privs and immediately forget it (this courtesy of a
little known article within the arrl publications).

its the same with any test. we learn the test, not the knowledge. funny
thing is, I learned morse code at 15, never got to use it much and pretty
much forgot what I learned. perhaps if I had become a ham then, we
wouldn't be debating this (or in your case, attempting to debate).

Frankly, I don't give a shit one way or the other. I wouldn't mind
relearning the code, if it served any real useful purpose (which, it
seems, the ITU has pretty much put paid to).

oh well......

I don't hear you bragging about YOUR ticket, dude! give us your callsign
and name. I'll be respectfully impressed if you do.

<crap deleted>

you don't huh? funny, theres at least 15 or 20 recent incidents (including
those directed my way) where you appear to do just that.... you flap your
gums and you flip-flop. geez! you are worse than most politicians!

why don't you do us all a favor and exercise a little more brain and a lot
less mouth.

I mostly use them when I contest and/or chase DX on HF. Thats basically
it..

In fact that is why I decided to upgrade years ago.

Good show Mike. Sure I know W3YA. And this coming weekend is PA Qso Party.
I intend to enter. What call you using, if your going to enter?

I played in the California QP this weekend. Worked a bunch of them. Thats
always a good one to get into.

Tell the boys in PA to listen south. And pay attention to 40 also.

Your right Bruce. And that again proves one of my points. I never much
cared for the Vanity program anyway. In my opinion it is just a sneaky way
to charge for a license.

Forget it Larry. It ain't gonna happen. The puter folks may get into ham radio for the UHF / SHF linking aspects. Just to increase range. But that will be it.

HF has no interest to them. Nor does conventional voice stuff. And, of course, forget CW.

Basically what it amounts to, AND ALWAYS HAS. It takes a certain breed to be a real radio ham. And we are going away fast.

Is the reason for low growth that people don't know about the ARS?

I'd postulate that anyone that has any interest will pretty quickly
find out about us. have internet access, you'll find us. Read a
newspaper, and there are several articles a year about the ARS.

I'd also bet that there really aren't that many people who are really
that interested in radio. That's okay. I don't pick my hobbies on their
popularity. I pick them because I like to do them.

No, it's a long-on-the-market home appliance remote control and
alarm system, available at places like Lowe's and Home Depot
among many. Search for "X10" on the Internet and you can find
their website and product explanation.

> There was another system that was used to control clocks in schools and

>other places where the clocks need to show the same time over

Those were still very low-frequency. For clocks with synchronous
motors, the separate clock AC line could be speeded-up or slowed-
down by a separate AC source (synchronous clock motors don't
take much AC power). For some systems, a separate control line
was used to set the hands to a particular time all at once to make
them read the same. WREX-TV in Winnebago, IL, had still another
system combining a WWV receiver checking the time of a master
pendulum clock through the background tone-on from WWV and
then syncing all the clocks in the station running on their own AC
circuits. In master control we used the master pendulum clock
since every second counted (for cash flow) on taking network (CBS
at the time, coming up precisely 1.0 second after the hour or every
half hour).

I'm sure it can work...the question really is "can it be used anywhere
with the ease at which existing wired service does?"

When each and every BPL proponent HAS NOT EXPLAINED THE
TECHNICAL DETAILS OF THEIR SYSTEM, they can't actually be
charged directly with "intellectual dishonesty." At this point it is all
the usual marketing-advertising snow job.

> But even if it is a failure, some will be able to make money on it..
>for while.

That's usually the case. See the fancy bar-code reader that Radio
Shack was promoting as part of a "system" to speed up information
exchange. IEEE Spectrum magazine and a couple of other trade
publications have spotlighted that one.

The point with BPL now is still vaporware. It WILL increase the
noise environment from MF to bottom of VHF but it is impossible to
get a quantitative handle on the spectral power. Getting technical
details is like nailing jelly to a tree...it doesn't work and everyone gets
sticky from all the sugar in the jelly.

The ARRL Lab did the best they could with the BPL technical info
available. They used the maximum RF radiation specs from Part 15
in modeling one transmission line (so-called "MV" distribution in a
neighborhood). Their model was as "good" and "accurate" as the
circumstances allowed...and doesn't actually model a BPL system
because the exact nature of the BPL systems isn't explained!

The problem with such modeling is that the actual MV distribution is
HIGHLY variable depending on the city, district, neighborhood, etc.
The spacing of the conductors (which determines equivalent RF
characteristic impedance) is highly variable even if within the NEC and
local codes. For SOME distribution systems BPL uses those MV
lines (voltages from 4 to 12 KVAC). There's absolutely nothing in the
National Electrical Code or even any local ordinances that mandates
any characteristic impedance of those lines or standardization at RF!

None of us have any idea of how those "BPL modems" work...the BPL
folks won't explain it... :-(

>
> Agreed!

Initially, there was an UNWARRANTED Hue and Cry by the "radio
community" (two BPL proponents' name for ham radio) in that "RF
interference would be too high!"

Since NO ONE had any specific RF line level information on BPL
systems, it was really impossible to determine whether those levels
were "too high," "just right" or "too low." The ARRL model was
done solely on RF levels being at a certain maximum level that was
not determined from any specific BPL data.

Instead of acting in group hysteria, the "radio community" should have gone into basics and demanded more details of the BPL systems both in hardware and expected technical performance. For a bunch of supposed RF-savvy radio activists, damn few ever considered the AC power lines as RF transmission lines or the VARIATION of lines' characteristics at RF.

Picture an RF transmission line spaced for about 1000 to 3000 Ohms connected (somehow, unknown) to 75 Ohm coax as a basic model. Then consider that the RF xmssn line is really a triplet with a common in the center and the "coax" is really Twinax (a shielded twisted-pair, sort-of). Intuitively, it's going to be one bitch of a task to get a 7 to 8 octave frequency match of one line to the other. If the match isn't good, then the reflected RF is going to go someplace and that is back out the MV line and probably radiated instead of being absorbed (by unknown "terminations").

The BPL types would have been better off to just consider a fiber-optic cable carrying high-speed data both directions...and that mounted in the pole space of the MV lines. No conductors and the fiber-optic cable couldn't short out the MV lines and the MV lines wouldn't interfere with data on the fiber. Sharing "pole space" could have been their schtick instead of thinking that RF can flow easily on an AC power system never designed for RF.

>"lenanderson@mogur.com" wasn't you?

Why do you ask? I haven't been able to use Mog-Ur's EMS BBS in
years...Tom closed it down after being one of the first 10 BBSs in
the USA. He had Internet access for about a year until it got too
expensive and subscribers left to go directly on the Internet.

Tom Tcimpdis (easy Greek surname, just pronounce it like it is written),
KC6MLR, television video director, twice won Emmys for outstanding
technical direction ("Night Court" series, "Sinatra, the Man and His
Music" special). Built his own BBS to start with years and years ago
from a Heath H8 microcomputer, had to write his own software to get
it going as a Bulletin Board System. Had a fairly good side business
of custom personal computer systems, may still do that. Private pilot,
multi-engine rated, a road rally sportsman from way back. You can see
his picture on QRZ.com...:-) Quaffed a few with Tom at the 94th
Aerosquadron Restaurant at Van Nuys Airport, a regular hang-out for
several San Fernando Valley BBS members of the 80s and 90s.

"Mog-Ur" is a character name taken from the novel "Clan of the Cave
Bear." "EMS" is an acronym for Electronic Message System, in use
in computer-modem communications before EMS for Emergency
Medical Service became standards.. "Mog-Ur's" survives on the Internet
today after more than 20 years of existance.

>How is anyone to know that when reading your newsgroup posts?

Do you need ELECTRONIC SIGNATURES, authenticated by some
federal agency?!?!?

Go look in the FCC ECFS...under all the RMs from 10781 through 10787
and FCC 03-104. The listings have my postal address and my AOL
address.

>Those articles
>are well over a decade old, and "ham radio" (no caps in their logo) magazine
>hasn't published a new issue for years.

Tsk, tsk, tsk. HAM RADIO Magazine, an independent amateur radio
interest periodical (50,000 issues a month) lasted for TWENTY TWO
YEARS solely on the basis of advertising space sales. Publisher

Skip Tenney finally sold it to CQ Communications and probably retired.
Founding Editor in Chief Jim Fisk (SK, ex-W1HR) wasn't around to help
keep up the interest of the readers of a technically-oriented magazine.

Both CQ and ARRL sell a three-CD set of all 22 years of HR for $150
(shipping extra, always an extra with ARRL). Lots of good technical
information in there.

>Why should anyone believe your calims when you can't even remember your screen
>names? Someone who posts as much as you do would ordinarily remember such
things.

Ah, being the NEWSGROUP KOP!

Well, then Mister Kop, why don't you just make yourself Emperor of the
newsgroup and RESTRICT ACCESS only to those whom YOU APPROVE.
Until that happens, THIS newsgroup is still open to the public.

I've been doing computer-modem communications since 1984, 19 years
in all...as a subscriber, as a Sysop, as a co-Sysop, and as a public
forum moderator. I'm NOT going to remember everything anymore than
you can over nearly a two decade span of time...AND THERE IS NO
DAMN REASON TO REMEMBER EVERY PICKY LITTLE DETAIL TO
SOOTHE YOUR IMAGINED PERSONAL HURT.

I have this nice card punch at the ready. Just hand me your "TS card"
and I will punch it for you...:-)

I can vouch for that. I'm reasonably smart, and I really stink at Morse code. Morse code skills/knowledge are distinctly separtate from the RF skills/knowledge. I knew how to calculate a half wave dipole long before I knew any other Morse besides SOS.

Do I get a medal now? 8^) Probably not.

> Actually, the differences in privs from General to Extra are substantial.

Are they? Let's take a look...

What additional frequency spectrum does a General get by upgrading to
Extra?

On VHF/UHF - nothing

On MF - nothing

On HF:

100 kHz of non-phone/image space on 4 bands. This amounts to ~8.5% of
the 1182 kHz of non-phone/image space on the eight HF amateur bands.

350 kHz of phone/image space on 4 bands. This amounts to ~14.8% of the
2368 kHz of phone/image space on the eight HF amateur bands.

Total: 450 kHz of space out of a total of 3550 kHz on the eight HF
amateur bands. ~12.7% more space

What additional frequency spectrum does an Advanced get by upgrading
to Extra?

On VHF/UHF - nothing

On MF - nothing

On HF:

100 kHz of non-phone/image space on 4 bands. This amounts to ~8.5% of
the 1182 kHz of non-phone/image space on the eight HF amateur bands.

75 kHz of phone/image space on 3 bands. This amounts to ~3.2% of the
2368 kHz of phone/image space on the eight HF amateur bands.

Total: 175 kHz of space out of a total of 3550 kHz on the eight HF
amateur bands. ~4.9% more space

Of the 3550 kHz in the eight HF amateur bands, 66.7% - almost exactly two-thirds - is allocated to phone/image, while slightly less than one-third is non-phone/image space.

> With the FCC no longer issuing Advanced licenses, the only way to
> gain access to the "Advanced sub-bands" is to upgrade to Extra.

Said subbands consist of 275 kHz on four bands, all of it phone/image space.

> I'd say that's a pretty good incentive.

There's also the spiffy callsigns.

But it all depends on what it is a ham wants to do.

Back before restructuring, the ham who wasn't interested in phone/image had no reason to get an Advanced. And the ham who wasn't interested in CW/data had relatively little reason to get an Extra.

> beyond personal satisfaction!
>
Not what I meant.

My point is simply this: The code test has been deemed "unnecessary"
by some under the reasoning that a ham doesn't absolutley have to know
the code in order to operate an amateur station safely and legally.
The Tech license and the R&O for 98-143 are frequently pointed to as
proof of this.

But by that same logic, there is nothing (or very very little) in the
Extra *test* that is absolutely necessary for a ham to know in order
to operate an amateur station safely and legally. Proof of this is
easy - the only operating privileges that an Extra gets you that a
General doesn't are more kHz of 4 HF bands.

No new bands, no new modes, no more power. So most if not all of the
Extra written test is therefore "unnecessary" by the very same logic
that deems the code test to be "unnecessary".

So what we have is essentially this: The code test is held to a
different standard than the writtens by some folks. They think it's OK
to require people take more and more written tests to get more
privileges, but it's not OK to require even a basic 5 wpm code test
for any license.

Some may say "but the written test supports the basis and purpose of
amateur radio as a technical service" - but can they point to anyone
who became "more technical" because they were required to take more
written tests?

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

WASHINGTON - White House candidate John Edwards of North Carolina rallied Democratic activists against President Bush's $87 billion request for Iraq and Afghanistan, while rival Bob Graham considered his future in the primary race.

The speakers Saturday at the Democratic National Committee's fall meeting also included two other presidential candidates _ Missouri Rep. Dick Gephardt and Al Sharpton.

Democrats talked optimistically about their chances in next year's White House race. The White House is under investigation for a possible leak of intelligence, and polls find Bush's popularity at the lowest point of his presidency.

"We see an administration moonwalking on trying to come to who is guilty of the leaks that risked security for Americans," Sharpton said. "Where is Ken Starr when we need you?"

Graham's aides said the Florida senator decided to speak to the party leaders even as he was considering options for his cash-strapped bid and staffers were departing.

Graham had a disappointing fund-raising quarter that ended Tuesday. Advisers said he was trying to decide whether to drop out of the race or dramatically cut his staff and focus on fewer states.

All 10 presidential candidates spoke at the convention, which was ending Saturday. Many insisted that Bush misled Americans about the justification for war in Iraq while reneging on promises to deliver a compassionate conservative domestic agenda.

Edwards, a North Carolina senator, said in prepared remarks that Bush's request for $87 billion for military operations and reconstruction in Iraq amounts to "billion-dollar giveaways for his friends in the big oil industry." He criticized such large spending abroad when other problems exist at home.

Edwards supports the majority of the request _ $66 billion _ that would fund military operations. But he voted Wednesday to cut $15 billion from the amount that would be used to rebuild Iraq.

"We will meet our country's greatest need, but we will not give this president a blank check, a free ride or four more years," he said.

Sharpton said he wants the DNC to reject Michigan's plan to allow Internet voting in its Feb. 7 caucus. He argues that online voting amount to an advantage for affluent white voters over poor blacks who do not have computers.

Sharpton criticized Dean, the primary's leading fund-raiser who has a large following on the Internet, for not joining him in opposing the Michigan plan.

"He says he's the only white candidate to discuss race, well I'm the only candidate to do something about race," he said. "Gov. Dean, it's not enough

to talk the talk, you've got to walk the walk. Your coffers may be full, but your talk is cheap. We must do something about the racial divide and Michigan is a test point on that."

494. Woman opens fire at church, killing her mother, pastor and herself

Turner Monumental AME church in Atlanta

ATLANTA, Georgia (AP) -- A woman opened fire at an Atlanta church before services started Sunday morning, killing her mother and the minister before committing suicide.

Congregants of Turner Monumental AME Church said Shelia W. Chaney Wilson, 43, was agitated when she came to the church, in the Kirkwood neighborhood on the city's east side.

Wilson apparently shot the Rev. Johnny Clyde Reynolds after he greeted her and was walking away with his back to her, said Atlanta police spokesman Sgt. John Quigley. Police believe Wilson then shot Jennie Mae Robinson once in the head before turning the gun on herself.

One woman in the sanctuary at the time fled after the first shot was fired, and the other took cover behind a pulpit, Quigley said. He said an assistant pastor came in after hearing shots and found the three bodies on the floor.

Wilson's cousin, Nekeshia Burton, said Wilson went to the church early in the morning to talk to Reynolds, 62.

"Something wasn't sitting right with her," Burton said. But Burton said there were no signs that Wilson would become violent.

Assistant Pastor Christy Miller said the pastor had just finished teaching Sunday school and was walking through the sanctuary when he stopped to talk with Wilson and Robinson, 67.

Geraldine Andrews, the pastor's daughter-in-law and a friend of Wilson's family, said Robinson recently took her daughter out of a mental health facility.

Debra Mitchell, a member of the church, said Wilson had recently lost her job.

"We knew she has some instability, but we didn't know it was this deep," Mitchell said.

Many remembered Robinson, who taught Bible study, as "a sweet individual, always praying for other people, always doing missionary work," Mitchell said.

The pastor was described as mild-mannered and generous.

"There was nothing too small or too great that he'd do for you," Miller said.

The shootings happened before most worshippers arrived for church. When they got there and heard what had happened, church members sobbed and hugged in front of the building.

"We're such a loving church, a family church," Miller said. "We'll support each other through this."

495. praising the FCC

Hey, Jim? Just a quick question, 'cause I'm going on what goes on around here. Have you ever heard long-time hams of the elder generation who get on a club repeater and routinely forget to identify? I've heard entire conversations take place here, where one or more of the long-time hams [probably forget] fail to identify--even when they leave the radio.

>
> - False/misleading identification
>

Haven't heard much of that on ham radio.

>
> - Power far in excess of legal limit
>

Heck, I wouldn't know if that was taking place without the right test equipment I suppose. I could sure guess it one way or the other or, again, take some hams around here at their word that they "<chuckle> have a tendency to overdo it now and then to get that " "rare" " one."

>
> - Use of non-type-accepted/certified equipment
>

Ditto above.

>
> - Operation on unauthorized frequencies
>

Haven't listened long enough at any time to see how much/often I hear this on ham radio. Bet it goes on more than we realize, though(?)

>
> - Intentional interference
>

Hear that all the time on VHF and HF. More common on VHF, though.

>
> - Obscenity/profanity/vulgarity
>

Hear that all the time. And, I'd classify calling Democrats Nazis as being vulgar, etc. I hear conversations such as this quite routinely around here--again from long-time hams on their local "club" machines--I guess where they figure they have earned the right to be that way.

>
> - Contacts beyond the legal distance limit
> - Contacts beyond the legal time limit
>

Of course, this would be a moot point--for the most part--on ham radio.

>
> And the big one:
>
> - Use of radio to facilitate other illegal activities (such as speed
> limit violations)
>

Well, gotta hang my head again and say that I hear that routinely done around here on 2M. In fact, you'll hear the proverbial "smokey" reports, and hear of hams bragging all the time about zooming down the highway ("I'm trying to catch up with you, dude, and I'm doing 75; how fast *are* you going?"). Really.

Just my two pennies worth of stuff that can go on whether it's CB or not. And, I agree with you on all the comments about TV, etc., although I like most of the comedy shows on ABC.

Listen to the ARRL video is the best I can offer over the net.
If you were here, I'd be happy to take you down to the BPL
area in Emmaus and show you ... to someone who's listened
to a lot of data transmissions it has a certain characteristic (which
varies from the SS system of main.net and the OFDM system
of Amperion ...) but it's nearly impossible to explain in text.

> One possible backlash of this is that there may be many hams running
> about looking for BPL interferece, and finding other Power line
> interference that the Power companies will have to clean up!

Most have been dismally poor at doing that - ARRL has over 300
unresolved power line noise complaints on the books, according to
Ed Hare, including 50 or so where the FCC has sent a letter to the
utility telling them to find it and fix it.

No, "X10" was an in-home system.

I'll be at the mountaintop using W3YA, Centre County We're on 40 a lot.
I'll be the control op some of the time for newbies, and hanging out for
the hams that don't have a home station. Once in a while, I'll get to
operate even. I'll keep an ear out for you.

Several articles a year out of how many thousand?

Folks hafta know where to look.

Remember the movie "Contact"? Great opening scenes. But nowhere do they mention
that what's going on is amateur radio!

btw - the Vibroplex shown in that film is the very model and vintage I have
used since 1974.
>
> I'd also bet that there really aren't that many people who are really
>that interested in radio. That's okay. I don't pick my hobbies on their
>popularity. I pick them because I like to do them.

Radio "for its own sake" has always been a niche avocation. I went to a
highschool (class of 1972) that had 2400 boys and a heavy academic emphasis on
math and science. In my senior year there were exactly six licensed hams there.
Of those six, three remained active long after high school. Now we are two,
with the untimely passing of WA3RVT some years ago.

More publicity can't hurt. But amateur radio isn't a spectator sport - for
most, anyway.

--

There was a great article some years back which I will now paraphrase.

The author whose name escapes me now said that there were three basic kinds of hams - operators, communicators, and tinkerers. Or words to that effect.

Operators simply like to get on the air and make contacts. It's the medium more than the message, the skill as much as the results.

Communicators are there for the message. Radio is the tool to get the job done, that's all.

Tinkerers are into the technology of radio, the projects, etc.

Of course most hams a a mixture of all three, but you can see that the mix varies widely in different individuals.

It's also clear that as things change, the attractions of these three reasons wax and wane.

Once upon a time, amateur radio attracted lots of communicator types because there were so few alternatives within reach of the average person. I recall reading of hams who got their licenses simply to keep in touch with family members across the country or around the world. With the advent of cellphones, email and cheap longdistance, much of that is gone.

Tinkerers are still with us, but it's a different game now. In the past, most hams had to do some pretty serious tinkering just to get on the air - even with manufactured equipment. While that sort of thing is still around, it's not so prevalent as before.

Operator types are most numerous today, for obvious reasons.

The situation is analagous to cars - there are those for whom driving is a joy in itself, those for whom driving is a means to an end (transportation), and those who like to mess around with motor vehicles.

Clint you're screen name of "Rattlehead" doesn't begin toi address
the depths of yourignorance. And that of your likemeinded friends at NCI.

The proof? You'all see "mondernization" as yakking on SSB while those of
us who KNOW from personal experience that radiotelegraphy remains a
very viable and important mode within ham radio, are in fact the most
common users of advanced digital modes.

Nope.

'round these parts, failure to ID is pretty rare. Sometimes a newbie will
forget, and be very gently reminded in an indirect way (say, by having somebody
mention the call of everyone in the round table).

>I've heard entire
>conversations take place here, where one or more of the long-time hams

In some ways it's a bit of a mismatched comparison. If a ham runs, say, 6000
watts output (!) it will only make him/her about 6 db (1 S-unit) louder than
the legal limit. But the cber who runs 400 watts out is about 20 dB (almost
3-1/2 S units) over the line.

>> - Use of non-type-accepted/certified equipment

>Ditto above.

Hams are not required to use type-accepted/certified equipment. cb users are.
>
>> - Operation on unauthorized frequencies

>Haven't listened long enough at any time to see how much/often I hear this

Nope. No reason, really.

>> - Intentional interference

>Hear that all the time on VHF and HF. More common on VHF, though.

Must be some real characters down there in TX, Kim. The worst we get up here is
when somebody "doubles" on the repeater - and then, just so they don't feel
bad, everybody keys their rig at once and makes a heterodyne furball. For about
10 seconds.

Not really intentional interference, tho.
>
>> - Obscenity/profanity/vulgarity

>where they figure they have earned the right to be that way.

That's awful. Somebody tried that around here, the machine would go dead. Try
it more than once and they'd find nobody would talk to them.

Can't say I've ever heard anything like that on CW at all. Ever. Worst was
somebody calling somebody a lid for calling the DX on his (the DX's) freq,
after he'd announced he was working split.
>
>> - Contacts beyond the legal distance limit
>> - Contacts beyond the legal time limit

>Of course, this would be a moot point--for the most part--on ham radio.

'zactly

>trying to catch up with you, dude, and I'm doing 75; how fast *are* you
>going?"). Really.

'round here it's tough enough to go the speed limit....

And that all came from where?

>Just my two pennies worth of stuff that can go on whether it's CB or not.

Oh sure.

Point is, it was common on cb long before the movies and TV shows came out. It was not common on ham radio back then - or now, around here anyway.

>And, I agree with you on all the comments about TV, etc., although I like
>most of the comedy shows on ABC.

I see maybe a few hours of TV a week at most. Usually PBS, rented tapes and some of the better comedies.

Last week of the summer, was on vacation at a place with cable. 50 odd channels and usually not a thing worth watching.

Right now the newest Ken Burns documentary is on. First transcontinental auto trip, done west-to-east, in 1903.

Hiram Percy Maxim was an early auto pioneer, too.

True, but if the Extra written were not a significant barrier, then everyone would have passed it. It is certainly more of a barrier than 5 wpm for most non-EEs. Most of the mathematically based questions were in old element 4A, and so are now in element 4 (or, I should say, back in element 4).

OTOH, there is not much difference between Tech and General written. My bet is that when the code test is abolished the Tech licence will atrophy, but this will boost the General licence, with not much increase in Extras. Perhaps we should have a two class system, with only Generals and Extras?

Except that I found very early on that a lot of the more interesting DX
tended to be in what are the Extra subbands in the US. So I set my sights
on getting the Extra for that reason.

Why should that be? There are a great many of Tech Plus licensees
who don't bother to upgrade to General. It's just too much trouble,
or there is too little interest in the added benefits.
As an Extra of nearly 35 years, and as one who administered VE excams
for the first 8 years of the present testing system, I am quite sure
that the current Extra exam is a significant barrier only in the minds
of those who haven't really faced a barrier.

It is certainly more of a barrier than 5

> Perhaps we should have a two class system, with only Generals and Extras?

You view the situation as an EE who didn't need to study to work out
any of the technical problems on the Extra exam, few that there were.
Most applicants have the singleminded goal of passing the exam, and
learning beyond that goal is not only unnecessary, it gets in the way of
the goal at hand. So they naturally just don't do it. The curent method
of testing clearly facilitates that position.

Some of them later find the interest to involve themselves in further
study and learning. I think it clear enough that there isn't much of
that demanded, and the knowledge level displayed by so many advanced
level licensees clearly demonstrates that a great many hams get the
license for the sole purpose of operating and advancing their technical
skills and knowledge is far down the scale of what is important to them.
Ub= nfortunately today that includes Extra class licensees. Again, the
current testing system clearly makes that possible. Before the advent of
VE testing, it did not.

I would have to say it is one factor at least. I am not saying it is the
only factor for low growth.

>
> I'd postulate that anyone that has any interest will pretty quickly

That postulation would also have to assume that there is some awareness of
this hobby/service, even if it is only a small amount of awareness. What I
was referring to was, I have run across many people that DID NOT have ANY
awareness whatsoever. Of course after discussing, they did have at least a
little bit of awareness, and it would be up to them to pursue it any
further.

>
> I'd also bet that there really aren't that many people who are really

I would agree with that statement as well Mike. Those people are not part
of this particular equation; being the awareness issue.

Huh???? Why would an avocation like amateur radio be mentioned when
running for public office?

I can imagine that such a mention would make sense if he was a candidate for
a job as an engineer or technician at an electronics or communications
oriented business, but as a governor?????? Did K7UGA campaign literature
mention that he was a ham when he was the Republican candidate for President
of the US?

Would love to see a thousand per year or more! This would be more on the shoulders of local groups, clubs and individuals to coordinate with local media to make this happen. A person in every club, with the responsibility of being the PR person would be a good goal. This person would be responsible for contacting media outlets for every event, including open meetings etc. I did the PR function for our local club for 2 years, and even trained a neighboring club PR person with the techniques I had utilized. I had created a quite a tracking system to keep track of media contacts, upcoming events, and results thereof. I should write something up on this to share with others eh?

>
> Folks hafta know where to look.

Any time a ham radio related event is in print media, a website address should be included in some way or another if the media outlet will do so.

>

Hey.... I don't know what it is like around where you are at, but
unfortunately around here, electronics are no longer being taught as an
elective class choice. In fact alot of the "vocational" classes that one
could take as an elective in high school around here are being cut out. But
of course the sports and art classes are still supported.....

Having the extra license means that I can rove up and down an entire
phone band at
will, and not having to stop at an advanced or general subband edge. No
forbidden
ham bands.... And I do rove during contests. I don't compete, but I
work the contesters
to see how far my signal propagates, etc.... Contests provide a steady
stream of
short QSOs.

I'm a EE, and like any reasonably successful college student, I still
made use of the
avaliable resources (the question pool) to prepare for the (at the time
I took them)
elements 4A and 4B. Found a few holes in my knowledge, and filled them
in for
at least long enough to score well on the tests (missed 1 on 4A, 2 on 4B
IIRC).
Got the CSCEs, and then the extra on Restructuring Day.

Most students only study what is expected to be on the exams. Thus, I could
solve calculus exam problems (take the intergral of (csc x^5)/(tan x^2
-1) dx)
but I still never got a good understanding of how to use calculus to
solve a real
world problem. Recently went looking for a "calculus for dummies" type
book, but all they had was how to do exam problems. Been there, done that.

I would much rather see the phone companies, like Ameritec in my specific case, pursue installing more "switching stations" or whatever they are called, to facilitate the ability to use DSL as a high speed connection. Seems like that would overall be a cheaper solution. In other counties I am quite sure it might be a little bit different, but in my county that I live in, I have heard from Ameritech employees that it would take 4 more switching stations to provide coverage for the entire county. (It is my understanding that one must live within a certain range from the switching stations or whatever they are called to be able to get the DSL service.....)

I definitely am not an expert in any way, shape or form about this whole BPL thing, but to me logic would dictate that if these BPL lines are going to be emanating a ton of intereference, would they not also be prone to interference coming in???

Seems to me that would create problems with connections and the quality of transfer rates.

The more outragious offenders almost always stand out, Kim. For example, if one signal in a area is much stronger than the other signals in that area, that person is very likely using illegal equipment. Plus, those running illegal equipment often give themselves away by doing other modifications to their radios (for example, an overmodulated radio is a sure sign the radio was modified). If you know the person's location, and the antenna used, the simple signal strength meter on most radios can be used for a rough guage. It's simply a matter of knowing what a CB would normally do under those conditions, compared to what that equipment is doing. Of course, none of this is proof enough for the FCC, but all are good informal methods (suggesting more formal tests need to be done).

Agreed ... but I reitterate "If someone already has the knowledge to
pass the tests, fine."

>
> > There is no "value added" in "making them work for it"
>
> Who said there was?

LOTS of folks here have promoted the "everyone should have
to WORK for their license "to prove their dedication, etc.""
(I'm not saying YOU said that, but lots of folks have voiced
that view ...)

> The point is that the 1978 class had a completely
> different situation from the 2003 class.
>
> > ... if
> > they have the knowledge they are qualified, period.
>
> So would you agree with Kim that anyone who can pass the required

Yes, unless they have some other disqualifying factor that would
render them unsuitable to be an FCC licensee (past history of
violations, etc.), but that's the FCC's call ...

> >(and likely
> > they worked for it or they wouldn't have the knowledge anyway,
> > so the logic of "making them work (more)" fails)
>
> It is a fact of human nature that most people value a thing more if it
> took some investment of themselves to acquire.

Maybe so, but it's not the FCC's business to determine how much
someone "values" a ham license ... only to determine if they meet
the minimum qualifications established. Besides, just because someone
did the work of learning BEFORE they decided to become a ham
doesn't mean they didn't still "do the work." Why should that (previously
accomplished) work be "devalued" as some suggest???

There are significant numbers of Techs, including some old Tech Plusses, who have no interest in anything below 30 MHz, so of course they don't upgrade.

However, I know some Generals who are just not very clever academically, including one guy who I think is on the DXCC Honor Roll. You can bet that if he found the Extra class theory easy he would have done it. It's quite an acheivement to work that many countries when you are restricted to the General sub-bands. FWIW, I don't even have my basic DXCC.

> of those who haven't really faced a barrier.
>

Well, I've 'only' been licenced for 23 years, and I've only been an Extra for 10. I'm also a VE, but I'm not sure that I have much idea how much effort the students put in just from administering tests to them. I don't even know most of them.

However, I get the impression that element 4 is hard for someone of average IQ, and maybe even too hard for some hams who didn't do so well in school. Of course that view doen't fit if you have a religeous beleief that only the CW test keeps out the unwashed masses, HI!

In fact the CW test kept me out for a long while, and kept me off HF for longer still, whereas I passed elements 3B and 4A without studying for even a single minute when I went in to take the Tech (they didn't have a spare 4B paper for me to do, so I took that later and did study somewhat).

Different people have different apptitudes for different things. It took me a couple of dacades to master the code (well, I mean pass the 20 wpm test, I never really became good at it), and hypothetically a garbage collector with a 50 IQ might take as long to pass the Extra written, or never be able to.

Actually, it's not that hypothetical. I taught a ham radio class once, back in the UK. I only had one of my ten students fail the theory, and he _was_ a garbage collector. He was very keen, and worked very hard, but he just wasn't very clever.

You may be right on that score. It is possible to study only superficially and pass a multiple guess test. Don't hold your breath if you want written answers back, though. We both know it isn't going to happen.

Dang....a two tier license structure not mandated by the government? Heaven forbid...hi.

VP2VB, Danny Weil, has gone on his last DX-pedition. He died Oct 3, 2003 in San Antonio. His obit is copied below.

Fair winds and following seas, old friend.

73, de Hans, K0HB/KG6AQI

Danny Weil of San Antonio, TX was born January 14, 1918 in a suburb of London England. He was descended from many generations of watchmakers and was apprenticed in the trade of watchmaking. Later he earned a Degree in Mechanical Engineering and Navigation. His father, Jack Weil, was killed during World War II in the London Blitz.

Danny joined the Royal Air Force at the age of 17 and in the 10 years he served, he was stationed in Ceylon, India, Norway and Stalingrad. Danny left England in 1954 in a boat he made by himself in order to travel the world alone after being inspired when he read the book "Kon Tiki" in 1947. In 1963, after 9 years, 3 boats and travels to the Atlantic, the Carribean and the Pacific Islands,

Danny completed his around the world voyage. Needing a means of communication, he taught himself Morse Code, radio theory and obtained a British Amateur radio license. Sailing single handedly around the world was a trip he volunteered to undertake on behalf of radio "hams". His voyage was integral in setting up ham radio stations on remote islands and the expedition was monitored by over 100, 000 amateur radio enthusiasts around the world. He is remembered by most "hams" as "the first DXpeditioner."

Danny was known as an adventurer who had a dry sense of humor which was characteristic to the British but his heart was warm and his loyalty as a friend was unparalleled. He was preceded in death by his wife Naomi Weil and his mother Christine Eckels.

Danny is survived by his close knit extended family of friends, Dan & Barbara Mclhany of Fair Oaks; Bonnie & Billy Henderson of San Antonio and all of the employees at Towne North Animal Hospital.

But not when mere proposals and petitions were flying about.

And let's be up-front about it - manufacturers are part of the amateur
radio community, and have a vested interest. If a rules change has an
effect on Kenwood's sales, why shouldn't they comment?

That doesn't mean their comments will necessarily always be in the
best interest of the ARS.

Good idea! But considering that I've never owned a non-USA made piece
of hamgear, I doubt it would mean much to them coming from me.

In fact, I'm probably the exact type of ham that Ikensu wants to go
away. In 36 years as a ham, I've bought exactly two major pieces of
ham radio equipment (transceivers). Both were kits. Both were from
American companies. All the rest has been used stuff, military surplus
("and they shall beat their swords into plowshares, and never make war

any more") and good ol' homebrew. A few rrap regulars have heard and
worked said homebrew.
>
> BTW, has anybody sent their respective ARRL candidates an e-mail re. their

> right opportunity. Same with our regular elected representatives. Drop 'em a
> note and make 'em, at least, question the FCC. Remember how the vanity call
> system came about.

I dunno if bugging congresscritters will do much good. But the ARRL
directors really do want to know, because it means they have backing
whichever way they decide.

Is there a point to all this besides your trying to avoid the fact
that you forgot yet another screen name you used in rrap?
>
> "Mog-Ur" is a character name taken from the novel "Clan of the Cave
> Bear."

Actually, it's a title. The character's name is Creb. "The Mog-Ur" is
a title/function he performed in the Clan.

> "EMS" is an acronym for Electronic Message System, in use
> in computer-modem communications before EMS for Emergency
> Medical Service became standards.. "Mog-Ur's" survives on the Internet

Doesn't answer the question.

How is anyone who reads a post by

"len.anderson@mogur.com"
"nocwtest@aol.com"
"averyfine@aol.com"
"averyfineman@aol.com"
"lenof21@aol.com"
or
"lenover21@aol.com"

supposed to know that all of them are one and the same person - if,
indeed, they are? Particularly when your name does not appear anywhere
in many of them?

Why should they believe you when you say you have not posted by other
names, when it has been shown that your list of screen names left out
at least two that you have used?

> >Those articles
> >are well over a decade old, and "ham radio" (no caps in their logo) magazine
> >hasn't published a new issue for years.
>
> Tsk, tsk, tsk. HAM RADIO Magazine,

There are no capital letters in the logo printed on the magazine
covers. They did the e.e.cummings thing. "ham radio" is the name of
the mag, not "HAM RADIO".

Just look at the cover.

> an independent amateur radio
> interest periodical (50,000 issues a month) lasted for TWENTY TWO
> YEARS solely on the basis of advertising space sales.

That's not correct.

The magazine subscriptions cost money, so they did not exist "solely
on the basis of advertising space sales" If the subscription/newstand
price was $20 per year and there were 50,000 subscribers/newstand
buyers per month, that's a *million dollars* of revenue from
subscriptions. Back when $1,000,000 was a lot of money.

Existed ""solely on the basis of advertising space sales"? I think
not! Were that true, the subscriptions would have been free. Like most
industry magazines.

Also, I seriously doubt that the mag was 50,000 copies/month for the
entire 22 years.

> Publisher
> Skip Tenney finally sold it to CQ Communications and probably retired.
> Founding Editor in Chief Jim Fisk (SK, ex-W1HR) wasn't around to help

IOW, it ultimately failed in the marketplace. Too bad - it was a good
mag in its time.

Why do you live in the past so much?
>
> Both CQ and ARRL sell a three-CD set of all 22 years of HR for $150
> (shipping extra, always an extra with ARRL). Lots of good technical
> information in there.

The newest of which is well over a decade old. Many of the parts used
in the projects are now made of unobtanium.

A complete set of QST is also available on CD. Every issue, all the
way back to December 1915. Almost four times as long as "ham radio"

QST is still being published - the oldest still-published radio
magazine in the world.

I've written for QST.

You haven't.

> >Why should anyone believe your calims when you can't even remember your screen
> >names? Someone who posts as much as you do would ordinarily remember such
> things.
>
> Ah, being the NEWSGROUP KOP!

Just asking a question. And pointing out your mistakes.

btw, it's spelled "cop".

> Well, then Mister Kop, why don't you just make yourself Emperor of the
> newsgroup and RESTRICT ACCESS only to those whom YOU APPROVE.
> Until that happens, THIS newsgroup is still open to the public.

Is there a rule against asking questions? Or pointing out when
someone's statements are demonstrably mistaken?

>
> I've been doing computer-modem communications since 1984, 19 years
> in all...as a subscriber, as a Sysop, as a co-Sysop, and as a public
> forum moderator.

But you're not the moderator here.

> I'm NOT going to remember everything anymore than
> you can over nearly a two decade span of time...

Nobody expects you to remember everyhting. That's what Google is for.

We do expect, however, that you behave in a civil manner and not be so
nasty when something you write is proven to be a mistake.

> AND THERE IS NO
> DAMN REASON TO REMEMBER EVERY PICKY LITTLE DETAIL TO
> SOOTHE YOUR IMAGINED PERSONAL HURT.

Tsk, tsk, tsk. Poor angry baby! ;-)

No "hurt" on my part at all, Len. You're the one who is shouting and
carrying on. I'm just asking simple, direct questions. And pointing
out a few mistakes.

> I have this nice card punch at the ready. Just hand me your "TS card"
> and I will punch it for you...:-)

Sounds like another threat. Can you not resolve differences peaceably?

You may imagine yourself as a modern Jondalar or Creb, but you come
off like Broud and Attaroa.

Would Doni approve? I think not.

Gotta go! 'Ayla' just gave me "the signal"!!!

All I an say here is a related story. When I was the president of a youth Ice Hockey association, to recruit new players, we took out ads in the local newspapers, we took out ads on television, we posted ads on the bulletin boards in most of the schools in our county, and We posted flyers, professionally made by the Pittsburgh Penguins. association.

Then along comes a prospective player who's father gives me a dressing down in the board meeting on how our association just can't survive doing the poor job we do advertising. I listened patiently while he said we should advertise in the local newspapers, on television, in the schools, and in the Ice Rink.

I asked him how he found out about us, and he told me he saw the ad on
tv, and then in the rink. Go figure.

My point is that if prospective amateurs or skaters don't want to get
involved, there's no way we can stop them.

I don't think the ARS is an impulse hobby,the prospect has to want to
do it, and then has to look. Considering the small number of people that
even want to be a ham, a mass advertisement approach would be kind of
like spam.

Yes it would. The likely result would be a lot more error correction,
slowing the system down. Rumor has it the Power companies plan on suing
God for the lightning interference. 8^)

And obviously it wasn't a problemm and hasn't caused any problem, for
you and others similarly situated, nor for the ARS.

But.....how about all the Extras out there who have
successfully proceeded through the same system and emerged
with so little knowledge that they have no idea of even
how to design and build a simple *1/2* wave dipole?
With little or nothing beyond the question pools in their
libraries, many won't even know how or where to look it up.
And when(if) the day comes that won't be required to copy
ANY Morse code,one of the most used modes in ham radio,
at the most basic speed?

Understand that I'm not saying they shouldn't be hams, nor
that they shouldn't be allowed some HF access. We all start
somewhere.
But to allow them licensing into the top echelon of amateurs
is ludicrous and negates all that ham radio is supposed to stand for.

In short, it reduces the ARS to CB status.

>Also, I seriously doubt that the mag was 50,000 copies/month for the
>entire 22 years.

If you wish to demand an accounting or an investigation of Publishers' Sworn Statements, then you've gone slightly bonkers in pique. :-)

Subscription fees (periodicals usually call them "fulfillment" fees) only cover the mailing costs and distribution services' various charges. That is a "break-even" situation where the periodical has no real income.

Profit for a periodical comes from advertising space sales in all of the "independents" (those not affiliated with membership organizations). That is true for 73, CQ, Popular Communications, et al. The more ad space sold, the more the profit for the periodical's business.

There's no other profit for periodicals, not even when they run a sideline business such as HR did with their Ham Radio Bookstore. The ad space for the Bookstore could have been used by other advertisers.

QST is a membership magazine of the ARRL. As such, the amount of profit or loss from QST advertising space sales can be handled by the parent organization. QST gains slightly by having the easily-identifiable demographics of the number of members (see their page for the latest numbers).

>> Publisher
>> Skip Tenney finally sold it to CQ Communications and probably retired.

>> keep up the interest of the readers of a technically-oriented magazine.
>
>IOW, it ultimately failed in the marketplace. Too bad - it was a good
>mag in its time.

Why do you say "good?" All you've done so far in this manufactured dispute is to charge a technologically-oriented amateur publication with fraud or misrepresentation.

You know little about basic organizations and budgets of periodicals yet claim some "expertise" sufficient to engage in manufactured "disputes." :-)

>A complete set of QST is also available on CD. Every issue, all the
>way back to December 1915. Almost four times as long as "ham radio"

I'm sure. ARRL was founded in 1914.

Why do YOU live in that past so much? :-)

>QST is still being published - the oldest still-published radio
>magazine in the world.

Are you absolutely CERTAIN of that? :-)

Can QST survive as an independent periodical, solely on the profit
of ad space sales? We will never know because QST was never
an independent.

>I've written for QST.

BFD.

>You haven't.

Absolutely true. What was your staff title at QST? That would be
listed on their masthead every issue... :-)

>But you're not the moderator here.

Neither are you, Mistah Kopp.

>> I have this nice card punch at the ready. Just hand me your "TS card"
>> and I will punch it for you...:-)
>
>Sounds like another threat. Can you not resolve differences peaceably?

Tsk, tsk, tsk, Rev. Jimmie doesn't know about chaplains' "TS" cards?

:-)

Ah yes, Rev. Jimmie wasn't in any military service of the United States.

I shall ask forgiveness of using familiar military service humor terms.

Would 50 Hail Hirams be enough penance for that?

Would a side of theses nailed to a church door be too much? :-)

[Marty, you should have seen these guys...:-)]

In article <blue4k$gfm14$6@ID-189073.news.uni-berlin.de>, "Ryan, KC8PMX" <REMOVETHISkc8pmx@diamondcs.net> writes:

>I definitely am not an expert in any way, shape or form about this whole BPL >thing, but to me logic would dictate that if these BPL lines are going to be >emanating a ton of intereference, would they not also be prone to >interference coming in???

Not necessarily. It depends on the format of the wideband information and whatever is used, if any, for error detection/correction, and whether or not that detection/correction is in the "up" or "down" direction along the lines.

The problem in trying to decide anything about BPL is that NONE of the proponents are revealing anything about the technical characteristics of their various systems. None of us know the "weight" of the "ton of interference," not even the ARRL Lab.

>Seems to me that would create problems with connections and the quality of >transfer rates.

Ordinarily, with simple systems, yes.

Case in point against: We (wife and self) decided on the digital cable TV service from our cable TV provider, main point being the larger number of non-fee channels available plus other services. That digital TV service provides "up" (to the head-end) communications through the supplied cable set-top box, used mainly for pay-per-view requests and the like. The analog TV service from the same provider requires telephone contact (tone-dial entry). Minor point, but the analog TV distribution is one-way and IS subject to external RFI affecting the signal.

The digital TV distribution is very nearly interference-free on all channels and there are many more of those available in the same bandspace than can be had via analog TV distribution. The digital TV formatting is the major key in being interference-free...as well as holding video and audio quality consistent regardless of signal strength.

I don't know for sure whether the digital TV format includes any error-correction capabilities in our particular TV cable provider but I suspect it does based on general electronics trade information of the past.

"Broadband over Power Lines" is such a general term that no clue can be derived from the name or the bandwidth of the "broadband" part.

If the BPL was carrying just a single Internet provider, then the bandwidth could be considerably smaller than the 78 MHz bandwidth referred to on

03-104, even for 1.54 MHz "T1" or equivalent digital service...in both "up" and "down" directions operating equivalent to full duplex.

Irrespective of the bandwidth, there's no information on the lines' RF levels from various BPL proponents. Only one BPL system was indicated as wanting "Part 15" incidental radiation levels much higher than existing regulations. That still doesn't give any indication on what the BPL distribution system line levels are.

Line levels of RF are important in considering the BPL coupling systems to provide subscriber drops...but there is NO information on what any of them use for couplers. We don't know for sure if they are really using the "MV" (4 to 12 KVAC, depending on locality) lines as long distribution lines. Those MV lines have finite lengths and we don't know if the BPL system provides any sort of terminations at RF of those ends. If there is no termination, then the lines will radiate as indicated in the ARRL model. Those MV lines can radiate even if terminated, although such radiation at HF will be lower.

MV lines were NEVER characterized, standardized, or municipally-coded as RF transmission lines, not even in the National Electrical Code documents. Their lengths and wire spacings (especially above ground) vary considerably. They work very fine at 60 Hz, dependable and reliable as they are, whether elevated or underground.

There are no details sufficient for any sort of real technical evaluation so all of it is a big guessing game at this point. The only true reports are the radio observations done at the BPL test sites, not done with calibrated field strength meters/receivers.

After I became an Extra, there was a time when I felt a little odd about it. I knew all the test questions, and a lot more, but my operation skills were really not that good. I also saw some Extras both before and after I got my ticket who were really really green, and needed tutoring in some real basics. I mean real operational basics. The half wave/quarter wave dipole thing is no joke, even if we make fun of it. The top level should be just that. As many people find out after they leave college, there is more to life than just taking tests. Experience should count for something.

"We", Brain? "We" without exemption implies everyone.

And I am sure you DON'T "enjoy" anything I have to say, mostly
because I rub your nose in your own errors as effectively as I do.

> Try behaving in a rational and civilized manner, and you'll not
> attract so much negative attention.

Hmmmmmmm......All the "negative attention" I've "attract(ed)" has
been from you (a person known to proudly associate himself with a
pathological liar), Lennie, (who IS the known pathological liar),
Vipul, (who doesn't know the difference between BS and shinola), and a
couple of anonymous posters who "hit and run" with some wise cracks.

Ergo I am not at all impressed with your suggestion about ANYone's
behaviour.

>I definitely am not an expert in any way, shape or form about this whole BPL >thing, but to me logic would dictate that if these BPL lines are going to be >emanating a ton of intereference, would they not also be prone to >interference coming in???

Yes and no.

The signal level in the line can be set to be much higher than almost any interfering signal induced from outside.

Because the entire 1.7-80 MHz spectrum is available to the BPL system, and it can theoretically use whatever modulation schemes it wants, things like error-correction, retries, redundancy and avoidance of specific frequencies can be incorporated.

For example, you start transmitting on 50.2 MHz SSB and you punch a hole in the BPL. It adapts and stops using 50.2 MHz - while you're transmitting.
>
>Seems to me that would create problems with connections and the quality of >transfer rates.

Perhaps. And the BPL proponents are trying to change the rules in such a way that the *licensed* services have to accomodate them!

562. Ham Radio in the FW:FW:Fw: World of Emails!

Newsgroup: rec.radio.amateur.policy
Date: 2003-10-07 23:22:00 UTC
From: Kim W5TIT <kimscliff@yahoo.com>
Message-ID: <blvhtp$6b8@library2.airnews.net>
Source record: 80038

I got this today in my email. While the callsign is fake, leaving the whole story in question, it's still creative:

Subject: 1000 Marbles

Food for thought. A Ham Radio Fan Writes:

The older I get, the more I enjoy Saturday mornings. Perhaps it's the quiet solitude that comes with being the first to rise, or maybe it's the unbounded joy of not having to be at work. Either way, the first few hours of a Saturday morning are most enjoyable. A few weeks ago, I was shuffling toward the basement ham-shack with a steaming cup of coffee in one hand and the morning paper in the other.

What began as a typical Saturday morning turned into one of those lessons that life seems to hand you from time to time. Let me tell you about it.

I turned the dial up into the phone portion of the band on my ham radio in order to listen to a Saturday morning swap net. Along the way, I came across an older sounding chap, with a tremendous signal and a golden voice. You know the kind; he sounded like he should be in the broadcasting business. He was telling whomever he was talking with something about "A Thousand Marbles." I was intrigued and stopped to listen to what he had to say.

"Well, Tom, it sure sounds like you're busy with your job. I'm sure they pay you well but it's a shame you have to be away from home and your family so much. Hard to believe a young fellow should have to work sixty or seventy hours a week to make ends meet. Too bad you missed your daughter's dance recital he continued." "Let me tell you something that has helped me keep a good perspective on my own priorities."

And that's when he began to explain his theory of "A Thousand Marbles."

"You see, I sat down one day and did a little arithmetic. The average person lives about seventy-five years. I know, some live more and some live less, but on average, folks live about seventy-five years."

"Now then, I multiplied 75 times 52 and I came up with 3900, which is the number of Saturdays that the average person has in their entire lifetime."

"Now, stick with me, Tom, I'm getting to the important part. It took me until I was fifty-five years old to think about all this in any detail", he went on, "and by that time I had lived through over twenty-eight hundred Saturdays.

I got to thinking that if I lived to be seventy-five, I only had about a thousand of them left to enjoy. So I went to a toy store and bought every

single marble they had. I ended up having to visit three toy stores to round up 1000 Marbles. I took them home and put them inside a large, clear plastic container right here in the shack next to my gear."

"Every Saturday since then, I have taken one Marble out and thrown it away. I found that by watching the marbles diminish, I focus more on the really important things in life. There is nothing like watching your time here on this earth run out to help get your priorities straight."

"Now let me tell you one last thing before I sign-off with you and take my lovely wife out for breakfast. This morning, I took the very last Marble out of the container.

I figure that if I make it until next Saturday then I have been given a little extra time. And the one thing we can all use is a little more time."

"It was nice to meet you Tom, I hope you spend more time with your family, and I hope to meet you again here on the band.

This is a 75 Year old Man, K9NZQ, clear and going QRT, good morning!"

You could have heard a pin drop on the band when this fellow singed off.

I guess he gave us all a lot to think about. I had planned to work on the antenna that morning, and then I was going to meet up with a few hams to work on the next Club Newsletter. Instead, I went upstairs and woke my wife up with a kiss. "C'mon honey, I'm taking you and the kids to breakfast!"

"What brought this on?" she asked with a smile.

"Oh, nothing special, it's just been a long time since we spent a Saturday together with the kids. And hey, can we stop at a toy store while we're out? I need to buy some Marbles...

Which points would you dispute?

Do you believe the FCC has a responsibility to determine how
much someone values a ham license?

Do you look less favorably on those that learned electronics
as a vocation and, therefore, excercised only minimal
or no effort to pass the ham tests?

Do you look less favorably on those that learned morse code
as a vocation and, therefore, excercised only minimal
or no effort to pass the ham tests?

Cheers,

>>
>> You can't change that situation anyway.
>
>Agreed ... but I reitterate "If someone already has the knowledge to
>pass the tests, fine."
>
Sure.

But the claim was all about how the folks in '78 all got ham tickets and the ones in 2003 did not. I'm simply pointing out that it's ana apples and oranges comparison. Heck, the promise of a day's liberty and a free trip off-base in exchange for an hour of taking a test that was far below the level of what you did every day was a no-brainer.

>> > There is no "value added" in "making them work for it"

Folks say all kinds of things. Point is, no matter what you make the requirements, some will say they are too easy and others will say they're too much of a burden.
>
>> The point is that the 1978 class had a completely
>> different situation from the 2003 class.

>violations, etc.),

Good point! And that's the sort-of contradiction I was talking about.

It's not just passing the test(s), but also not having certain disqualifying factors.

>but that's the FCC's call ...
>
And that's where we part company with Kim's ideas - as I understand them, anyway. The whole "character" issue.

You see, the tests are pretty objective in their methods. While we may not be crazy about multiple choice, it is 100% objective of method because there is one defined right answer and all the others are wrong. With methods like essays and fill-in-the-blank, a lot depends on the marker's judgement.

But the question of disqualifying factors is entirely subjective. ("Kid, have you rehabilitated yourself?" - Arlo Guthrie, "Alice's Restauraunt"). Almost any violation, including those unrelated to radio, can be a cause for FCC to deny a license. That's why they want a TIN, as I understand it. Don't pay your taxes or court-ordered child support? No ham license.

>> >(and likely
>> > they worked for it or they wouldn't have the knowledge anyway,
>> > so the logic of "making them work (more)" fails)
>>
>> It is a fact of human nature that most people value a thing more if it
>> took some investment of themselves to acquire.
>
>Maybe so, but it's not the FCC's business to determine how much
>someone "values" a ham license ... only to determine if they meet
>the minimum qualifications established.

Sure.

The concern is, however, that making the licenses easier and easier to get may result in some folks not valuing them enough even to bother following the rules.

You've been a ham since 1975, Carl - how do you think the current level of rules compliance (particularly in the area of operator on-air behavior, like jamming, cussing, failure to ID, etc.) compares with that of 1975?

But what those qualifications should be is an endless debate. Even if the code test disappears, the content of the writtens will be debated. Just watch, Carl - there will be those who attack the Extra as "elitist" and "a barrier" and "an unreasonable burden".

>Besides, just because someone
>did the work of learning BEFORE they decided to become a ham
>doesn't mean they didn't still "do the work." Why should that (previously
>accomplished) work be "devalued" as some suggest???

For that matter, what about those for whom it wasn't that much "work" at all? Some folks can pick up a copy of, say, "Now You're Talking", read it through, and pass the test easily, even though they had no radio experience at all beforehand. Other folks will struggle with the very same material.

> travel the world alone . . . .

Danny Weil, VP2VB . . boy this brings back a lotta memories from my
'wayback radio days!

After his first boat sank he toured the radio clubs in the States,
particularly the DX and DX contesting groups to drum up funds for a
replacement boat. He was the guest speaker at one of the FRC club
meetings and put on a great show which is when I met him. He was a
very memorable piece of work to say the least. And it didn't take very
long to get him back in the water either.

He changed the face of DXing in a big way and was the first of the
real DXpeditioneers and led the way for other pioneers of his ilk like
Gus Browning and OH2BH.

Last anybody around here heard Danny had taken up residence in San
Antonio and settled into a career in the machine shops in that region
supposedly never to heard on the air again.

Although, the case could be made that he wasn't a real ham.

Yes, he was an important part of ham radio for some years. But I
always got the impression, and the story suggests the same, that
he was interested in amateur radio beyond communication for
his sailing voyage. It always seemed like once he had that in place
for his own reasons, he discovered amateur radio beyond that. Amateur
radio gave him a reason to wander, because it gave him a reason for
visiting plenty of isolated locations for more of a reason than because
they were there. The fact that he pretty much disappeared after
Yasme was over, not being interested in DXing those exotic locations,
leaves in question how much of a ham he was, his contribution to
the hobby notwithstanding.

One might compare Danny to Gus Browning. The latter started
out in amateur radio at a young age, and went on the tour to put
many countries on the map. But then when that was over, he was
still considered a high power DXer, publishing DX Magazine for many
years.

Looks like the both of you missed it every time I said it here...
It doesn't matter where it was learned, just as long as it *was* learned.
The fact that so many licenses, particilarly extra class, are handed
out without that really important factor is the problem.

Yep If they come to a fork in the road and don't take it, there's no way to stop them. <g>

Most people either are grabbed by ham radio or they aren't. I can't speak for those who are stymied by a code test, though. I haven't yet found out how anyone who is actually interested in becoming involved could sit by for so long waiting.... I never knew anyone like that.

Yep, it does somewhat give it away, doesn't it? That reminds me of a drunk CB'er heard with the shortwave one night. Over a course of an hour or so, he contacted maybe a dozen people and asked each one how he sounded. No matter what that person said, he always responded with "Maybe this will help. Ugh!" as he turned on his linear (the "Ugh" was a long, drawn out, grunt). After the initial surprise, I couldn't stop laughing each time he did it. The fact that he was perfectly serious (he was simply that proud of his, possibly new, toy) made it all the more humorous.

It all ended with a argument with another CB'er. I couldn't hear what the other CB'er said (cheap shortwave receiver), but I got the impression that he was complaining about interference with another channel.

Ahhh! You may be getting closer to understanding my statements though I made no statements concerning "native amateur populations". Amateur radio licenses figures are not broken down into "native" and "non-native" categories. I didn't attempt to discount. I discounted.

Of course! Those parts could also be very productive in contests because of the reduced crowding,

My point was simply that the Advanced did not give any more CW/data privileges - the incentive was all 'phone.

Some folks make a big deal about how "tough", "theoretical" and "mathematical" the old Advanced written was. Supposedly tougher than the Extra, yada yada yada.

But back in 1968, when I was at the FCC office for the General, the examiner said "why not try the Advanced while you're here?" (Could not do Extra because back then it had a 2 year experience requirement).

So I took it and passed easily even though I had not studied for it at all. I was 14 and it was the summer between 8th and 9th grades. Not a big deal even then because I knew of 12 year old Extras back then.

It's not my fault you're so unemployable you can't afford anything. I bet you're driving that used-over 100,000 mile shitbox because you can't aford a newer car, too.

First off I don't agreee with these sorts of "categorizations". The
implication here is that you consider Gus a "better ham" than Danny
was and I reject the concept. Categorically. Plus dissing Danny a half
century after he lit up the bands is not exactly a class act Michael.

Danny never made any bones about the intent and purpose of his ham
activities. We kept his boat(s) afloat which was his need and he
shipped the cards which was our need. And there isn't any more to it
than that.

His format has been followed innumerable times since, i.e. hams with
marginal and/or short term interests in the hobby or DXing putting new
ones on the air. If the cards they've sent over the years hit the
no-counters pile your own totals and the Honor Roll membership count

would drop like rocks.

Which brings us full circle, to a thread I started in July.

It is exceptionally difficult for me to imagine that a person who is interested in something will refuse to participate because of one part of the entrance requirements. That person is simply not all that interested.

This isn't about whether Morse should or shouldn't be tested for, it's about basic interest.

I know what you're saying Ryan, but there is a huge difference between
the Internet and Ham radio:

Ham radio does not allow a person to download Porn, do business online,
or find cool software.

Ham radio would like a person to have a certain technical acumen, while
the internet demands clicking on links.

Wheras may who are interested in Ham radio find the internet a useful
tool and entertaining, the converse is only true in a very few cases.
It's really not the same group of people.

If the internet were to suddenly dissapear, very few of the people using
it would decide to migrate to Ham radio (conjecture, for sure - but do
you want to refute that?)

> Our local group just did a presentation/booth for the boy scouts this past
> week, and only about 5-10% had a clue that ham radio even existed.

Good work, man!

No, Not good news, 30,000 would've been good news.

15,000 is a good start though.

During one of the many wars that the French and the British fought and the French usually lost, the French just happened to capture a British Major. An officer brought the Major to the French general for interrogation. The French general began ridiculing the Major for wearing "that stupid red tunic." The French general said, "Why to you wear that red uniform, it makes it easy for us to shoot you." The British major replied, "If I do get wounded, the blood will not show, and my soldiers will not get scared." The French general said, "That is a very good idea," The Frenchy turned to his orderly and said, "From now on all French officers will wear brown pants."

Don't you know it! When I graduated college with a BSEE, I was pretty
much your standard
issue geek/nerd, short on the social skills and ability to handle office
politics. Which doesn't come
up in college at all. But after years of working experience and some
help from various
good friends/mentors, you eventually learn it. In college, if it
doesn't show up on an exam, you
need not learn it to eventually graduate. I have heard that that is not
true for PHD levels,
where social/political skills are vital. Similar skills needed to get
good reviews/ avoid layoffs
from managers in industry. I've been told that I'm less nerdy and
better at the office
politics nowadays. ;-) Not that I'm likely to turn to the dark side
and become a manager

:-)

Kim:

Don't look now, but being an Amateur Radio Operator falls into the
category of "hobbies and interests," which, as anyone with any current
business savvy at all knows, would not necessarily be included in a
resume unless this particular activity was in some way directly
related to the position being sought. Jim (that's MISTER Weir to you)
is running for Governor of the State of California; he's not applying for
a job as a salesman at the Ham Radio Outlet.

All you've done, as usual, is make yourself look foolish in an attempt to
do the same to others.

Mike:

True, if you're talking about the difference between Advanced and Extra
under the Pre-Restructuring system. In that system, the motivation to
upgrade to Extra was to gain the International DX "windows" on phone
and CW, plus the benefit of the 1x2 and 2x1 callsigns, and the "status" that
went with being an Amateur Extra. I considered that to be well worth
the effort required to pass Elements 1(c) and 2(e). However, "status"
among hams is now Politically Incorrect, so we must now endure the
"socialized" licensing system we now have in the ARS. Personally, I
didn't have too many problems with the No-code Tech concept, except
for the fact that even though it literally gave away 97% of all amateur
operating privileges, it only led to greater expectations of even more
dumbing-down.

Yeah, I'm afraid it's true. The irony is that some of the most technically-
inclined YOUNG hams I've known have been those who were eager and
willing to respond to the code learning/testing challenge. It just may have
been the one thing that would have motivated more young people to
become hams.

Question 1:

Were you discriminated against by such a rule? Since you lived through such a thing, your input would be worthwhile.

> So I took it and passed easily even though I had not studied for it at all. I
> was 14 and it was the summer between 8th and 9th grades. Not a big deal even
> then because I knew of 12 year old Extras back then.

I do believe there is a "toughness effect" that is related to how much trouble a person may have had at the time. They remember that it was fairly hard for them then, so it remained difficult, even though the person learned much more over the years. And since they know a lot now, the old test must have been tough.

Kind of like when I went back to my old elementary school a year or so ago. I remembered how big the place was, and how big a deal it was to walk from one end of the school to the other. If I hadn't gone back and seen just how small the place was, my perception would have been forever skewed as to it's size and how intimidating it was to a little kid such as I was.

No!

>such a thing, your input would be worthwhile.

My view, then and now, was that experience was part of the qualifications. Of course, someone could just toss the license in a drawer for two years and do nothing with it, but such was not the case with anyone I knew.

The day the Advanced license arrived, I sat down and calculated when the 2 years would be up, based on the effective date of the license. On the first exam day when it would have been OK to take the test, I was back at the FCC office to get the Extra.

I did not think any of the tests - written or code - were that difficult. They required one to know a little radio and some basic code skills, that's all.

I had the same experience going back to my high school after not having been
there for more than 25 years. How small it appeared! And I'm about the same
size I was in those days.

If you look at it from that perspective, yes. But, just as in ham radio,
even the "internet" provides for opportunity if you look and are interested
beyond the basics. There's networking environments that can be
"home-brewed" that will provide faster access, more efficient use of hard
and soft storage; there's machine specific solutions to better connection
speeds and more efficient use of BPS and MPS, etc. See? In my world, you
look at the "internet" like I look at ham radio. BUT, you won't hear me
saying that you aren't interested, or that you are "dumbed-down" or that you
aren't equal [or not], or any of those other childish arguments one uses for
self-gratification. Know why? Because, in the end, we are all on the
internet...and why would I care why or how you approach the task?

>

Whereas, if ham radio went away today...well, there'd be no difference in internet usage because most hams are already there... And, I daresay that most hams would be "inventive" enough to create some pretty fantastical ways to employ the technologies VOIP, etc., to using the internet for "fun" communication.

Sometimes it is, sometimes not.

>

> it would decide to migrate to Ham radio (conjecture, for sure - but do
> you want to refute that?)

Sure, and I will say it again..... An alternative is only an alternative if
it is involved as a possibility in the equation in the first place. Like I
said in the quoted text above which is a mantra of some here, stating that
of course kids run to the internet. Of course, ham radio is not an
alternative for the kids, as they are not aware of it as an alternative.

People in their 50's, 60's, and older have a different view of radio, as it
was more of an important part of their lives that it is today for people.
Back then for them, radio was more of a primary entertainment and/or
information source than it is now, be it listening only or transcieving.

I have been pushing the group to look more into events like this, especially working better with the Scout leadership in this area. We had at least one kid (about 13-14) who definitely showed alot of interest, and who knows, possibly a new ham in the future??

There might actually be some merit to that. Teenagers are still quite
moldable, and would be excellent candidates to "mold' them into the hams
that we want them to be, in the ham community. (Especially with making them
code enthusiasts as well.) Now for the naysayers..... this would mean
identifying those with the aptitude towards ham radio, not to all the teens,
just the "right" ones, whatever that means.

Well since I *didn't* make any such linkage, and never have, your comment is out of line.

If you don't believe that proficiency in radiotelegraph operations is a serious part of ham radio, that's your problem.

I know no one who has ever linked it to technical knowlecge, despite the many claims of NCI mavens.

FCC won't drop the entry level license, whatever name it carries.
And I'd wager we'll have three licenses when it all settles out.

You can imagine what my small hometown looked like when I returned after
5 years military time away in places like New York, Hartford, Philly,
Chicago, Paris and Frankfurt.

AARGH!!. . never mind . .

> W6AM

W6AM tale: My second transmitter was a $29.95 Heathkit AT-1 I'd cobbled together. The only FT-243 xtal I owned was 7.060. Xtals were EXPENSIVE boy! Which when doubled put me on 14.120. Kinda useless freq for dxing so I had to really scrounge for contacts. CQ, CQ, CQ, CQ ad infinitum after school with all 3-5 watts of RF out or whatever it was. Finally a CT1 found me and we latched up for several days running. After some number of days another station called out of nowhere, it was W6AM mobile running CW from his car. So 14.120 got to be a three-way round table around 5pm Eastern Time for days on end. At the time I had no idea who W6AM actually was except that his name was Don and he was a really neat guy. I have a W6AM card.

Yeah, Gerry W3BES/W3GM. The radio god in these parts, my all-time great mentor. EVERYBODY'S mentor, that's the way he was. I yakked with Gerry on the club machine one day then found out he passed away two days later. Dredge up QSTs from the late '40s and early '50s and check the glossy back cover RCA power tubes division ads for a look at Gerry himself and the collection of the gorgeous monster amps he designed and built.

Mostly before my time, but an amazing fellow by all accounts. He was 85.

It should be remembered that he was doing his thing mostly solo in a small sailing craft back in the days before modern aids like GPS, solar power, solid state radios or even electronic depth finders were common. Had to have been quite a sailor as well as radio operator.

Most of all he was a true DX pioneer who left a legacy that will be remembered.

Fun fact:

When the results of the 1996 ARRL/READEX survey were tabulated, one of the results shown was the support for/opposition to code testing broken down by age group.

All age groups showed a majority to be procodetest, but the *most* procodetest group were the youngest! Hams under 24 at the time were 85% procodetest/15% anticodetest. Almost a 6 to 1 ratio!

How did you reach that conclusion? Is it because you ask questions for
which there are obvious answers or is it because you haven't thought the
matter through?

If I had to choose between coming off as smug or coming off as dim, I'd
pick smug every time.

Yeah, what she said. ;^)

I recall once, years ago, when Dick made a thoughtful, well reasoned
post about amateur radio. And he wasn't tail-ending someone elses
thoughts.

So it is possible - he has the capacity.

Bruce, on the other hand...

Ah. Another example of the "slow" class, again lacking common sense.

Tell ya what, Genius- when there are so many of you that the bands are carpeted with you, it won't be possible to walk over oldtimers - We'll be gone fishing.
You're doing your damnedest to do the same thing to ham radio you did to CB, and the FCC and ARRL are not only going along with it, they're facilitating it. It's lunacy - right where you belong.

>
> I enjoy your ocassional post about radio.

We've tried that here before, Brain. Your mentor can't stand
seeing anyone but himself express anything meaningful about radio.

There have also been several other posters who have tried to
drive content-focused threads here, but what's the use? YOU certainly
have had nothing to offer...And what you HAVE offered has been found
faulty and erroneous, to say the least.

> > > Try behaving in a rational and civilized manner, and you'll not

Perhaps, but again, that would require some sort of reasonably
alid survey, and neither you nor Sir Putzman have the resources or the
reputations of being impartial or accurate in your posts.

In otherwords, you are again spinning your wheels...

> > Ergo I am not at all impressed with your suggestion about ANYone's

> Just how certain are you? Have you actually done it?

Yep. I allow anyone to subscribe to my lists. Use any of them for "a/s/l" messages, commercial offerings, or ANYthing having to do with some get-rich-quick scam get's you booted.

I'd even let YOU join, Brain...But I don't know why you'd want to be there. All four of them pretty much expect that you have some idea of what the other subscribers are talking about.

So far, you've been want for such a demonstration in THIS forum, I know you'd fail in them.

640. RM-10808 --- Wexelbaum Redux

Newsgroup: rec.radio.amateur.policy
Date: 2003-10-09 21:13:43 UTC
From: groupk0hb@earthlink.net
Message-ID: <5ee63311.0310091313.4991d260@posting.google.com>
Source record: 80216

Joe Speroni, AH0A, has introduced a looney-tune petition, reminiscent
of Bob Wexelbaum, W2ILP "Amateur Radio Needs More Tests".

Below is my comment to the FCC.

73, de Hans, K0HB

Before the
Federal Communications Commission
Washington, DC 20554

In the Matter of)
)
Amendment of Part 97 of the Commission's) RM-10808
Rules to Drergulate Testing for Non-Voice)
Mode Allocation for Amateur Radio Licenses)

To: The Commission

PERSONAL COMMENTS OF HANS BRAKOB, K0HB

OVERVIEW

These comments are submitted in response to the petition of Joseph
Speroni (AH0A) which requests changes in the qualifications and
testing of applicants for new or upgraded licenses in the Amateur
Radio Service.

I. Discussion:

The instant petition requests the elimination of Element 1
(5WPM Morse code test) from the required test for General
and/or Extra Class licenses in the Amateur Radio service,
and goes on to request that the written examinations (elements
2, 3, and 4) be stripped of all mode-related questions except
those pertaining to Phone operation. Persons licensed under this
scheme would only be authorized to use Phone emissions, unless
they had additionally passed examinations related to other modes.

Petitioner further proposes that operation in ARES (Amateur
Radio Emergency Service) would be restricted to licensees who
had passed a written examination on that subject.

Petitioner also proposes that Volunteer Examiners would only
be required to administer the basic written examinations (elements
2, 3, and 4) and could decline to administer any of the proposed

mode-related examinations if they felt it were burdensome to them.

II. Comments:

I agree with the proposal to remove the requirement for a Morse test (element 1) from the Amateur Radio Service rules.

However, I disagree with the remainder of his proposal.

Key to the concept of amateur radio regulation is the permission (indeed encouragement) to tinker, experiment, and try different (dare I say "sometimes new") things.

Under a system where "you can't use a mode until you've passed a test on that mode" amateur radio experimentation would be dramatically inhibited. The development of NEW modes of amateur radio communications would in fact be PROHIBITED under a Catch-22 situation where "you can't play with it if you haven't been tested and if it hasn't been developed yet we can't write test questions".

The current regulatory environment for Amateur Radio properly allows significant latitude in selection of operating modes and communications techniques, and the historical tendency of the Commission to relax restrictions on new modes should be continued, indeed accelerated.

All of the above aside, the proposal is fatally flawed in three Regards:

1) Effective enforcement (detecting operators operating outside their authorized mode) would be virtually impossible.

2) Allowing VEC's to pick-and-choose what tests they choose to administer would deprive applicants in those localities of reasonable access to the full range of amateur radio activities.

3) Requiring a separate passing an examination to engage in RACES/ARES activities would cripple the ability of the Amateur Radio Service to adequately respond to the needs of the public when our services are required in emergency communications scenarious.

In summary, this petition should not be tossed aside lightly. It should be hurled aside with great force.

Respectfully submitted,

H. Hans Brakob, K0HB
1610 Weston Lane
Plymouth, MN 55447

Senior, YOU've made so many out-of-line outright insults of others,
that you should spend more time off-line.

> If you don't believe that proficiency in radiotelegraph operations is
>a serious part of ham radio, that's your problem.

It's no one's "problem," senior.

U. S. amateur radio is NOT exclusively about radiotelegraphy.

Not in the regulations, not in the law, only in the imaginations of a
few.

> I know no one who has ever linked it to technical knowlecge, despite
>the many claims of NCI mavens.

Senior, your inductive reasoning doesn't have the capacity to resonate with the rest of the world's frequency.

Get in tune.

LHA

>Back then for them, radio was more of a primary entertainment and/or
>information source than it is now, be it listening only or transcieving.

Ryan, allow an observation from one of those "older" folks... :-)

Radio _broadcasting_ was a kind of entertainment in the 1940s and
before. It was unique to all. No need to leave the house. Everyone
heard the same program at the same time and those programs could
be discussed in-person with others right afterwards. News and
important events could be broadcast immediately, no waiting for the
next day or next week to read about it in a newspaper.

By 1950 television broadcasting was firmly established and this
revised the way "radio" was thought about. Television brought live or
recorded images along with sound and the impact on viewers was
greater than with just sound broadcasting. With old sound-only radio
listeners could only imagine the environment surrounding a show.
Their imaginations played a greater role in their emotional likes or
dislikes about a show.

By 1960 the non-broadcasting radio applications were spreading, such
as two-way mobile radio becoming common with public safety
organizations and large businesses, now well established as an
important communications tool. Microwave radio relay was also firmly
established for national communications linking for everything from
telephone long-distance to television networking. The first of the
communications satellites were already lofted for wideband, multi-
user communications and more were coming and launched. Telephones
now had direct-dial capability all over the country and extending to much
of the rest of the world. It was in, it was working, it was a fact of daily
life.

By 1960 aural-only radio broadcasting had shifted output focus. The
old radio programs were going if not gone to the new magic of television.
"Radio" in the common vernacular became the news over the car radio,
pop music to break up the monotony of a commute, background sounds
while in a residence...relatively lesser in importance compared to TV.

By 1970 mobile two-way radio was a necessity for police, fire, medical emergency services, businesses doing vehicular delivery or needing fast routing for pickups, taxicabs. The first of the solid-state handheld transceivers had appeared that was economical for almost all small to large businesses in walk-around utility work to construction sites to dockyard cargo movement to motion picture location shooting coordination, to name a just a few. "Two-way radio" was familiar to almost all Americans by now, whether by seeing it in daily life or on television shows.

By 1980 the first trials of cellular telephony had begun, in "car phones" first. "Funny-looking" antenna shapes (at cell sites) were sprouting in urban areas. "Cordless" telephones for the home and office appeared as hardware operating frequencies went higher and higher in VHF and UHF bands. Color television broadcasting was firmly established and important events were being organized around TV scheduling needs. Videotape units for the home were available for recording TV...with timers for automatic recording. Videotape boxes had bulti-in TV tuners.

By 1990 the desktop personal computer was a part of business life and offices had wired computing networks. The wireless network had appeared to eliminate wiring. Cellular telephony was firmly established and growing explosively in the communications industry. Information theory had matured and, with newer complex ICs, could provide more secure digital communications on WLANs. Data and facsimile comm was now available over mobile radios (data terminals in larger PD patrol cars, remote EKG transmission from ambulances). "Cell phones" was a term in the public vernacular. TV tuners as PC peripheral cards had appeared. The Compact Disk recording medium had been standardized and CD players were on the consumer market. Shirt-pocket sized AM and FM radios had become so popular that makers were competing in external color styling rather than in reception quality. Handheld two-way radios had shrunk to true one-hand operation and offered tone signalling for a variety of ways, from CTCSS to DTMF on built-in keyboards.

By 2000 "consumer electronics" was a separate branch in consumer chains. The words "PC" or "Mac," "CD" and "cable [TV]" and "Internet" and "cell" and "dot-com" and "spam" and "mouse" and even "CB" were all well-known and recognized by the public. Cell phones were so numerous that one in four Americans had cellular telephone subscriptions, either personal or business (that would become one in three by the end of 2002). Cordless telephones were now digital and in the 2.4 GHz band. The maritime world had adopted the GMDSS, used voice and data modes ship-to-ship and ship-to-shore and VHF two-way radios in harbor areas, commercial land private water vehicles alike. Marine radar small enough to be used on small motorboats had appeared in 1974. The EPIRB was an established emergency device for both waterborne and airborne vehicles. Civil aviation had VHF AM radio for nearly a half century along with VHF to UHF radionavigation aids of many kinds. Local government agencies and businesses used "trunking" to conserve EM space in their already crowded spectrum allocations. GPSS, already in place for the military, was now available in consumer stores, small enough for easy carry in hiking with

accuracy almost to that of military secure standards. The geo-synchronous communications satellite orbit positions were now filled to safe capacity, covering all parts of the world. The first of the radio clocks (tradenamed "to atomic standards") had appeared in consumer stores, automatically synchronizing with WWVB and using low-power DSP circuitry for greater-than-a-year battery operation in any of the states. "Wireless" no longer meant just radio but applied to any electronic device not needing wire connections in the home, from simple doorbell signalling to remote TV monitoring to baby monitors to networking home computers to keyboards and mice for personal computers to small microphone-earphone headsets to outside temperature sensors signalling digitally to an inside master unit. The public can buy a pair of FRS handheld UHF transceivers for less than $50, operate them without license up to 2 miles range and with digital voice and signalling mildly secure from other FRS users. Chain department stores at the K-Mart level regular sell CB kits for mobile use, all items shrinkwrapped together in the same package for less than $100. Cell phones got video capability, able to send images over the cell circuit to others in real time along with abbreviated messaging that was becoming a fad with teen agers. The belt-clipped pager receiver was both an important link in alerting and a sign of "self importance" to users. The standard small-unit military radio [hitting the quarter-million production quantity by 2002] was digital in voice and data, in-clear or secure, on-frequency or a frequency-hopper to reduce DF interception. GPS and other digital systems was starting to network land military units for real-time large-group movements on battlefields. Boomers and sharks in the Navy submarine fleet used secure data VLF-ELF alerting under water. Independent moving/relocating company vans have both GPS and cell phone map data couplers for finding routing and address locations. The ubiquitous CD flat disk has overpowered the old phonograph disk market, now cheap enough to use in throwaway advertising gimmicks in the mail and magazines. The CD-size DVD is rapidly overtaking the VHS video recording medium.

In 2003 the consumer market has seen a steady market in radio-controlled toys to the extent of introducing matchbox-size R/C cars at $10 each. Cell phone oriented corporations are starting chain stores for cell phones and pagers, building PDAs into some of them and incorporated video cameras appearing to be a standard option. Flat-cased small portable color TV sets with LCD screens and all-electronic channel tuning (VHF through UHF) are available for less than $150. "Shortwave" is becoming almost an outmoded term but the consumer market still has SW BC radios with digital tuning and SSB receive capability, small, flat, easy to pack into suitcases. International SW broadcasting has started using digital modulation after several years of successful testing on HF. Larger departement stores have RFID systems of many kinds, the tags small and very cheap, adhesive-backed for attachment to all kinds of merchandise; the RFID "gates" are becoming a standard feature at

main entrances. There are waterproof portable AM-FM receivers for use in showers, others small enough to become a part of lightweight ear-phones. Wireless microphones for the consumer market have passed the two-decade mark, are a standard part of stage and TV performer's wardrobe. The flat-screen TFT display is beginning to replace color CRTs with plasma displays for larger size TV screens flat enough, light enough to hang on a wall. Dog and cat collars are available for sensing electronic borders and warning the animal on proximity of such. There are experimental trials of implantable human ID tags working at radio frequencies to read out identity and medical information and history in the device.

Radio astronomy is a standard scientific tool in astrophysics. Tens of thousands of volunteers around the world are part of the distributed computing effort of SETI, linking through the Internet to get data and sending the sorted data back. SETI uses only the "hydrogen line" frequency to search, already has discovered several locations having some kind of repetitive radio signal phenomena. Some electric power utilities are already using a form of carrier current communications to read subscribers' electric meters remotely, negating the need for human meter readers traveling to each subscriber. Some companies have meter readers equipped with handheld terminals for individual recording, some of those with digital radio or cell phone data forwarding to the central office. Overnight delivery services already have a version of that portable terminal as do some supermarkets.

Anyone in the American public who can look around and obverve what is going on in the marketplace, in society, or reading newspapers and magazines can discover all or part of what I wrote above. "Radio" is much more far-reaching that just HF band activity...to the PUBLIC. They KNOW about it in general and its myriad uses. They've seen bits and pieces of information of devices and systems yet to come in the near future.

So, in this arena there are some pro-morse-code-test advocates steadfastly clinging to the notion that a monotonic arythmic pattern representing English characters is "basic" to "radio" for the "future." It "must" be done so that all can use their imaginations (as in radio broadcasting of the 1940s) to discern the "personalities" of the code senders and develop "lifelong friendships" on the barest of data, devoid of all the normal clues available in normal in-person contact. All "must" know this basic communications means of the 1920s and 1930s radio so that they can be "acceptible" to a group of radio hobbyists "pioneering" the radioways for later generations' futures.

Those later generations came, lived in that future and went on to even more futures...passing the imaginations of those hobbists still stuck in the standards and practices of pre-WW2 times. Those later generations, like yourself, live with accomplished advancements in many kinds of "radio" and can all relate to "radio" as a fact of existance.

What the later generations seem to lack is _imagination_ of working communications slowly with a minimum of contact data of the sender and deriving the feelings of being a "master" of their craft all through a singular rhythmic pattern of monotonic sound. All to achieve the mighty importance of a federal hobbyist license in a "service" of avocation and recreation and personal pleasure.

I've got a good imagination. Just can't see it like they do. Not even a half century ago when I got tossed into the Big Leagues of HF communications during a Real service to my country. The Real future was there back then and that bred even more fantastic futures in a wider range of "radio" applications later. Those futures are now our present. I'm anxious to see more of what Real imaginations come up with, and, hopefully, to enjoy those too!

Just in case there is anyone that might think about using the above links
and information ---- DO NOT !!!

To update MS products go their website. MS does not send updates &
patches to individuals. The above stuff has really caused people some
problems.

Sarge

Not at all.

Please explain how that license and career have any relevance to amateur radio policy. Particularly since you have never held any class of amateur radio license.
>
> You don't want to admit your occupation's firm name or what it does,

Because it's not relevant. And because I know you'll simply make fun of it.

> so you try to denigrate all those who aren't afraid of naming where
> they worked or where they worked or what they did at work in detail.

Who do I "denigrate", Len?

It's a plain and simple fact that no matter who my employers are/were, you'd make fun of my job if you knew what it was. Your behavior towards others here who disagree with you is clear proof of that.

>
> You want to diminish the efforts of Ham Radio Magazine founders
> Skip Tenney and Jim Fisk and their TWENTY TWO YEARS of
> successful, INDEPENDENT newsstand publications.

Where do I diminish their efforts, Len? They had a good mag but it ceased publication more than a decade ago. It's defunct.

> Why?

Why do you get so upset over the word "defunct"?

> Tenney
> is a radio amateur. Fisk is deceased and his old call (W1HR) is now

Yeah, he's a Novice. Which makes him far more experienced as a radio amateur
than you, Len.
>
> Details of NIST time-frequency activities are available from their
> own web site. If you need directions to Boulder, CO, there are
> several map and direction services available on the Internet.

Don't need 'em. I was there - at both the NIST site in Boulder and the WWV/WWVB
transmitter site in Fort Collins. Found 'em both without website help. Got some
good pictures of the then-current "atomic clock" and the trnasmitter site
antennas. And a picture of myself standing next to the sign at the transmitter
site. They're in the album with the pictures of my visit to ARRL Hq where I met
a few of the staff and operated W1AW.

> personal irritation.

No irritation on my part at all, Len. I'm just pointing out some facts.

> You are perfectly free to question AOL Member Services directly
> if you are so disturbed over "identities." YOU are a subscriber

> there. YOUR screen name does not identify you by legal name..

So? Anyone who knows anyhting about amateur radio recognizes "N2EY" as an amateur radio callsign, which is actually more unique than a legal name. There are lots of people with your name, and there may be others with my name. But there is only one person assigned the amateur radio callsign N2EY. And that's me.

Oh wait, you don't have an amateur radio callsign...
>
>>Why should they believe you when you say you have not posted by other

>
> Your manufactured "dispute" is becoming absurd.

It's about your credibility in here, Len. Or lack thereof.
>
>>> an independent amateur radio
>>> interest periodical (50,000 issues a month) lasted for TWENTY TWO
>>> YEARS solely on the basis of advertising space sales.
>>
>>That's not correct.
>
> No? :-)

No. ;-) ;-) ;-)
>
>>The magazine subscriptions cost money, so they did not exist "solely
>>on the basis of advertising space sales" If the subscription/newstand
>>price was $20 per year and there were 50,000 subscribers/newstand
>>buyers per month, that's a *million dollars* of revenue from
>>subscriptions. Back when $1,000,000 was a lot of money.
>>
>>Existed ""solely on the basis of advertising space sales"? I think
>>not! Were that true, the subscriptions would have been free. Like most
>>industry magazines.
>>
>>Also, I seriously doubt that the mag was 50,000 copies/month for the
>>entire 22 years.
>
> If you wish to demand an accounting or an investigation of Publishers'
> Sworn Statements, then you've gone slightly bonkers in pique. :-)
>
> Subscription fees (periodicals usually call them "fulfillment" fees) only
> cover the mailing costs and distribution services' various charges. That
> is a "break-even" situation where the periodical has no real income.

Nonsense. It all benefits the bottom line. You said the mag existed "solely on
the basis of advertising space sales". Not profited - existed.
>
> Profit for a periodical comes from advertising space sales in all of the
> "independents" (those not affiliated with membership organizations).
> That is true for 73, CQ, Popular Communications, et al. The more ad
> space sold, the more the profit for the periodical's business.

Then why aren't those magazines free?

All income benefits the bottom line, whatever it's called or wherever it comes
from. You said the mag existed "solely on the basis of advertising space
sales". Not profited - existed. That's simply not true.
>
> There's no other profit for periodicals, not even when they run a sideline
> business such as HR did with their Ham Radio Bookstore. The ad
> space for the Bookstore could have been used by other advertisers.

Doesn't matter.
>
> QST is a membership magazine of the ARRL. As such, the amount of
> profit or loss from QST advertising space sales can be handled by the
> parent organization.

So?

> QST gains slightly by having the easily-identifiable
> demographics of the number of members (see their page for the latest
> numbers).
>
They also lose by having to run the organization, which does things far beyond
putting out a magazine.

>>> Publisher
>>> Skip Tenney finally sold it to CQ Communications and probably retired.
>>> Founding Editor in Chief Jim Fisk (SK, ex-W1HR) wasn't around to help
>>> keep up the interest of the readers of a technically-oriented magazine.
>>
>>IOW, it ultimately failed in the marketplace. Too bad - it was a good
>>mag in its time.
>
> Why do you say "good?"

It had some good articles in its time.

> All you've done so far in this manufactured
> dispute is to charge a technologically-oriented amateur publication
> with fraud or misrepresentation.

Where? What charges?

You're the only one who has charged a publisher of "fraud".

You are not the publisher of "ham radio" magazine, and never were.
>

> You know little about basic organizations and budgets of periodicals
> yet claim some "expertise" sufficient to engage in manufactured
> "disputes." :-)

You're trying to avoid a basic acciunting issue.
>
>>A complete set of QST is also available on CD. Every issue, all the
>>way back to December 1915. Almost four times as long as "ham radio"
>
> I'm sure. ARRL was founded in 1914.

And the first issue of QST was December 1915.
>
> Why do YOU live in that past so much? :-)
>
I don't - you do, recalling a magazine defunct for over a decade, lilitary
radio experiences of a half century ago, employers you have not worked for in
decades, etc.

Oh wait, you don't have an amateur radio callsign, have never been a radio
amateur....

>>QST is still being published - the oldest still-published radio
>>magazine in the world.
>
> Are you absolutely CERTAIN of that? :-)

Yep.

>>I've written for QST.
>
> BFD.

What do you mean by "BFD", Len? Spell it out for us.
>
>>You haven't.
>
> Absolutely true.

Finally, something factual from you.
>
>>But you're not the moderator here.
>
> Neither are you, Mistah Kopp.

Never claimed to be. You try to be one, though.

>>> I have this nice card punch at the ready. Just hand me your "TS card"
>>> and I will punch it for you...:-)
>>
>>Sounds like another threat. Can you not resolve differences peaceably?
>
> Tsk, tsk, tsk, Rev. Jimmie doesn't know about chaplains' "TS" cards?

>
> :-)

More than you think.
>
> Ah yes, Rev. Jimmie wasn't in any military service of the United States.

And you are not, and have never been, a radio amateur. Yet you lecture us endlessly on the subject.

Mega Dittos. I especially like the "catch 22"
prohibition of new modes. Frankly I'm surprised
that Joe didn't think of that.

Cheers,
Bill K2UNK

Incorrect. What "push"? Based on membership numbers, NCI has fewer than 5000 members worldwide, even with no dues, no expiration of membership and having been around over 7 years.

Oh, more than just NCI; ARRL seems to favor it, and in general most hams
do that aren't the ones clinging to desperate delusionary hopes in certain
internet
NG's.

Yep, it's outta here, CW testing is soon to be extinct. It's goneski.

Clint

Unless you are putting more into what was typed or seeing it completely
different, no, I didn't admit more than what I wanted to.....

People in the teen age groups are still forming their identities and
becoming what they might be for the rest of their lives typically. If you
have differences with the word "moldable," then that is your problem.
Influenced maybe a better word then??

Since anybody in this country can discuss amateur radio policy (license policy or whatever), I do think a person's communications knowledge and experience elsewhere is at least somewhat relevant to that person's part in that discussion. Why would you think otherwise, Jim? Len is obviously interested in Amateur Radio, which is good. The only thing I don't understand is why he hasn't acted on that interest and gotten some kind of Amateur Radio license over the years. Since VHF and above is one focus of commercial communications today, one would think the Technician license would have at least some appeal to him. This glaring, long term, lack of committment to Amateur Radio is what brings his ongoing participation in this discussion under suspicion.

> > You don't want to admit your occupation's firm name or what
> > it does,
>
> Because it's not relevant. (snip)

This position is equally valid. While a person's communications knowledge and experience elsewhere is somewhat relevant (if that person chooses to make it so), communications knowledge and experience elsewhere is obviously not manditory for participation in this discussion, especially for the person holding an Amateur Radio license which will be directly impacted by the outcome of this discussion.

Amateur Radio Newslineï¿½ Report 1364 ï¿½ October 3 2003

Amateur Radio Newsline report number 1364 with a release date of
Friday, October 3rd 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. The comment period closes on Morse code
restructuring, Logbook of the World makes its debut and a new D-X
record for -- would you believe Wi Fi? The details on Amateur Radio
Newsline report number 1364 coming your way right now.

(Billboard Cart Here)

**

RADIO LAW: MORSE PETITION COMMENTARY CLOSES

If you have not yet filed comments on the frst seven Morse related
rule making requests, you are you of luck. Newsline's Bruce Tennant,
K6PZW, tells us why:

--

The why is simple. The period for filing comments on this initial
group of seven Morse code related rule making petitions closed on
Monday, September 29th. This, before several other requests that
favor retaining Morse have been made available for public comment.

Of those in the first group, some petitioners had suggested
eliminating the remaining 5 Word Per Minute C-W test. Others wanted
various levels of change in Morse testing. In all, well over 2000
comments that were filed by the closing date.

And what about the pro-code side of the debate? Will their views ever
be assigned a rule making designation? That's really up to the FCC.
Those waiting include the request from FISTS, the international Morse
preservation society. That one not only asks the FCC to retain the 5
word per minute C-W exam for General class license, but to also
require that Extra class pass a 12 word per minute test. FISTS also
wants written exams stiffened as well.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting.

--

We will have more on the latest round in the Morse debate in future
newscasts. (ARNewsline(tm))

**

RESTRUCTURING: LUXEMBOURG DROPSS HF MORSE REQUIREMENT

Yet another country has announced the dropping of the Morse code requirement for HF bands operation. As of the 25th of September, radio amateurs in Luxembourg with a CEPT Class 2 licence and callsigns in the LX3 series have had use of all of the HF amateur bands. (RSGB)

**

FROM THE ARRL LOGBOOK OF THE WORLD PREMIERES

The ARRL's new Logbook of the World secure electronic contact confirmation and logging system officially began operation on September 15th. The Logbook of the World system is a repository of log records submitted by users of the system. When both participants in a QSO submit matching QSO records, the result is a QSL that can be used for ARRL award credit.

To minimize the chance of fraudulent submissions to Logbook of the World, all QSO records must be digitally signed using a digital certificate obtained from ARRL. Getting a certificate requires verification of the licensee's identity either through mail verification for U S hams or inspection by ARRL of required documentation for those outside of the United States.

Software developed by ARRL can be used to convert a log file into a file of digitally signed QSO data, ready for submission. Full details on the system are in cyberspace at www.arrl.org/lotw. (ARRL)

**

REPEATER LINKING: ECHOLINK SAYS YES TO LOTW

Meantime, the Amateur Radio Internet linking system EchoLink has announced that it will begin accepting digital certificates issued by the American Radio Relay League's Logbook of the World program/ This, as an alternate means of authenticating new users.

According to Echolink creator Jonathan Taylor, K1RFD, system security is critical, and all new EchoLink users must be validated before being allowed access. In many cases,these people are asked to provide proof of license for verification.

Taylor says thst EchoLink system administrators currently process dozens of Amateur license photocopies each day, received by fax and e-mail. To streamline the process, participants in Logbook of the World will now be able to prove their identity to EchoLink using a that digital certificate, as an alternative to submitting a license copy. (K1RFD)

**

AT THE FCC: FCC COMMISSIONER SAYS YES TO BPL AND ARRL OBJECTS

FCC Commissioner Kathleen Q. Abernathy has taken the position that Broadband over Power Line is important to the future of cyberspace

communications. Speaking before a United Powerline Council conference an September 22nd, Abernatjy said that the introduction of BPL will contribute to what she terma as a broadband nirvana.

Addressing the council, Abernathy not only expressed enthusiasm for Broadband over Powerline technology. She went so far as to recommend the elimination or substantial modification of existing rules governing its deployment.

The ARRL Letter says hat the League was quick to respond. In a tersely worded September 25th fax to Abernathy, ARRL Chief Executive Officer David Sumner, K1ZZ, asserted that the commissioner overlooked some significant issues in her Nirvana analogy. In fact, Sumner called B-P-L a nightmare noteing that technical showings submitted by the ARRL and others in response to the Commission's Notice of clearly establish that BPL is a significant source of radio spectrum pollution. Sumner went on to say that it cannot be implemented without causing harmful interference to already established over-the-air radio services. (ARRL, published news reports)

AMATEUR RADIO SURVIVAL: UCF CLUB EVICTON FOLLOW-UP

A follow-up on the story of a college radio club thats been evicted after 31 years of continious service. The news is pretty positive as we hea from Amateur Radio Newsline's Mert Garlick, N6AWE:

--

The future of he University of Central Florida Amateur Radio Club is now in the hands of the school's Provost. This, as a direct result of hams from around the nation contacting the college to voice your dismay over the eviction of the club station after 31 years of operation from its campus location.

But even with all the community and political support, Mike Potaczala, KC4NUS, advises the College of Arts and Sciences is unwilling to quash the eviction. In fact, they have gone so far as to tell the Provost they no longer want any interaction with the radio club.

Potaczala, who is a staff advisor of the University of Central Florida Amateur Radio Club, says that now the Provost at least has a base understanding of the club's benefit to the students and the community

at large. More important, he is willing to help the club find a place to relocate on campus and is in the process of putting together the relocation cost figures. Unfortunately, the he does not feel he can justify directly allocating money from the university's budget to fund the relocation process. As a result, funding will have to come from school's Student Government, state and federal grants, and donations from the community.

Right now, the club is seeking help from anyone experienced in researching and writing proposals for state and federal grants. If you can assist in this project please contact the club via its website. That U-R-L appears in the print edition of this weeks Amateur Radio Newsline report.

For the Amateur Radio Newsline, Im Mert Garlick, N6AWE.

--

Again, if you can help the club write its grant proposals, contact it via the links at its website at http://ucf.edu/~wb4tcw/relocation.html (ARNewsline (TM), QRZ.com)

AT THE FCC: POWELL SAYS HE PLANS TO STAY

Federal Communications Commission Chairman Michael Powell says hat he plans to stay at the agency until the end of the Bush administration. Powell came under widespread criticism earlier this year for pushing thrugh new media ownership limits that allow television networks to acquire more local stations and permit a company to own a newspaper, television station and radio outlets in a single market. His announcement halts speculation that he might be leaving the agency. (Published reports)

**

ENFORCEMENT: GOOD NEWS FOR NJ REPEATER

Meantime on this side of the Atlantic theres some really good news for a New Jersey repeater operator. Tthe FCC's Daryl Duckworh, NN0W, explains why:

--

Duckworth: "The Enforcement Bureau has closed the matter of the technical compliance and coordination problems of the N2CTD repeater of Elizabeth Olsen in Farmingdale New Jersey on 146.775 MHZ. This is in view of replaced repeater equipment, corrected deficient operations and proper coordination."

--

In its letter closing the case, the FCC took the opportunity to remind N2CTD that the decision to operate a station as a repeater is a

totally voluntary one. That Repeaters are a convenience, not a necessity. Also that all stations including repeaters must have a licensee and a control operator capable of ensuring the immediate and proper operation of a station regardless of the type of control. (FCC, RAIN)

**

ENFORCEMENT: YOU NEED MORE THAN A TECH ON 17 METERS

Kelly G. Jones, K0EMD, of Fordland Missouri and Kenneth W. Paul, N0VDP, who resides in Lake City Minnesota have both been told by he FCC to stop operating in the 18 Mhz band. The reason for the notes is that both hams are Technician class license holders and Tech's do not have any operating privileges in the 17 meter Amateur band.

In its September 10th letter to the pair the FCC requested each to respond to within 20 days with whatever material either wanted to have considered in regard to the matter. The Commission says that the information submitted will be used to determine what further action the government might take. (FCC)

WITH THE SCOUTS: JOTA IS COMING

On a much lighter note, October 18th and 19th are the dates for the scouts 2003 Jamboree on the Air. Amateur Radio Newsline's Mark Abramowicz, NT3V, takes a look at the special relationship between ham radio and scouting:

--

When you think of Scouts and a Jamboree, images of tents, the aromas from all those goodies cooking in a dutch oven or a pot on the fire, and young men enjoying the outdoors might come to mind.

But add JOTA - or Jamboree on the Air - and the recipe for a great weekend is complete.

JOTA is sponsored by the World Scouting Bureau of the World Organization of the Scout Movement. This is the 46th year for the annual event.

Its goal is a simple one: connecting Scouts with other Scouts around the country and around the world by way of ham radio.

For many of those who take part, the fun starts with the campout - but the friendship and fellowship come through contacts on the radio. Jean Wolfgang, WB3IOS, is the American Radio Relay League's educational programs coordinator. She says several Scout councils in the United States schedule a campout around JOTA.

--

Wolfgang: "A lot of times the fall camporee falls this same weekend and so districts will arrange their camporee around the JOTA and then the hams come in and put up the big tarps and set up antennas.."

--

She says ham operators - whether adult Scouters or simply the fathers or friends of Scouts - bring their radios to Field Day-type settings - some in tents or cabins, others in picnic groves. They attract many a mike-shy Scout to come over and listen to the chatter from the radio. Maybe it's a Scout camp in Michigan, a community center in Arizona, a radio shack in Australia, or a hut in Panama.

--

Wolfgang: "It's more hands on, get the kids on the radio. And it creates friendships between Scouts in different countries, places that they would never talk otherwise to other Scouts."

--

The exchange is easy: a name, a location, Scout rank, age, and hobbies. That's for starters. Once the kids get going, you'd be surprised how much they enjoy talking to someone across the country or across the globe.

It's not a contest. But it's easy to generate a pile-up as operators scanning the bands look for stations calling: "CQ Jamboree" or "CQ JOTA."

And, Wolfgang says, the activity isn't restricted to just the boys.

--

Wolfgang: "This event is also for Girl Scouts," she says. "It's been a real struggle to get Girl Scouts to, the Girl Scout Leaders to find out about it."

--

And, of course, there are Girl Guides and co-ed Venture Crews. All are welcome.
Wolfgang says you may help turn someone on to the fun of Amateur Radio by taking part.

--

Wolfgang: "The League sees it as an opportunity to expose young people who may not be exposed any other way to ham radio," Wolfgang says. "And, although they may not turn out to be a ham in the next year or two - there'll be a time in their life when they'll settle down and may think of ham radio as a prospective hobby."

--

For the Amateur Radio Newslline, I'm Mark Abramowicz, NT3V.

--

The Jamboree on he Air is a world-wide event. Scouts may operate for 48 hours or any part of the time starting on Saturday at 00.00 hours until Sunday 24.00 hours local time. For more information visit the Jamboree on the Air website. Its in cyberspace at www.scout.org/wse/jota.shtml (ARNewsline(tm))

CONVENTIONS AND HAMFESTS: CALIFORNIA IN OCTOBER

Turning to ham radio happenings, the 12th annual Pacificon convention takes place October 17th to the 19th, but at a new location. This year the show's venue is the San Ramon Matiott with ARRL 1st Vice President Joel Harrisson, W5ZN as the featured banquet speaker. For more information take your web browser to www.pacificon.org or write to MDARC, P.O. Box 23222, Pleasant Hill., California. The zipcode is 94523 (VHF Reflector)

**

SEMINARS: WSWSS TO MEET IN CERRITOS CALIFORNIA

And the Western States Weak Signal Society's 9th Annual VHF UHF and Microwave Technical Conference takes place on Saturday October 11th. The venue is the Sheraton Hotel Towne Center in Cerritos California. The gatherng will feature technical seminars covering advanced DX'ing and contest techniques on 6 meters and all bands above. Producer Dave Bell, W6AQ, will be this years featured banquet speaker. More information found on the web at www.wswss.org . (WSWSS)

**

CONVENTIONS AND HAMFESTS: KALAMAZOO MI IN OCTOBER

And October 12th brings with it the Kalamazoo Hamfest. This at the Kalamazoo County Fairgrounds. Information on this one is in cyberspace at www.kalamazoohamradio.com slash hamfest and kalamazoohamradio is one word. (e-mail)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

ENFORCEMENT: UK GOES AFTER PIRATE BROADCASTERS WITH NEW ARREST LAW

If you decide to become a pirate broadcaster in the United Kingdom, getting caught will now be allot more than the seizure of your transmitting gear. You will now be going to jail. Jeramy Boot joins us from Nottingham in the U-K with more:

--

New powers of arrest were introduced on the 18th of September in an attempt to combat pirate radio stations. The police, working with Radiocommunications Agency investigators, will now be able to arrest a pirate broadcaster or anybody suspected of supporting or facilitating illegal broadcasting.

Previously police could only detain someone if they suspected them of giving a false name and address or another criminal act, such as a breach of the peace or assault. The new powers of arrest will also extend to acts of deliberate interference with radio communications and hoax calls, especially false distress calls.

The Communications Minister Stephen Timms said: "These new powers will be an important weapon in the campaign against pirate broadcasters. By interfering with communications services which are vital for public safety, pirates can put lives at risk. They also cause interference with other licensed radio users and can be a social nuisance to those who live near pirate stations."

Jeramy Boot, G4NJH.

--

Unlicensed broadcasters detained under these new U-K powers could face an unlimited fine or up to two years in prison. For other transmitting offences such as unlicensed use of business, marine, or amateur radio station the maximum penalty is a 5000 Pound fine and / or 6 months in prison plus forfeiture of any radio gear. Currently 5000 pounds comes out to a bit over 8000 U-S dollars and thats allot of money and jail time for talking unlicensed on the air. (GB2RS)

**

INTERNATIONAL - UK: UK ISSUING 5 MHZ NOV'S AGAIN

The United Kingdom's Radio Communications Agency says that it will resume issuing of 5 MHz Notices of Variation to permit more hams onto the band to expand propagation studies. A United Kingdom Notice of Variation is similar to the FCC's Special Temporary Authority document. In this case the privilege is reserved for United Kingdom Full Amateur License holders. British Intermediate and Foundation Amateur License holders and Short-Wave Listeners are also encouraged to participate in the experiment by submitting reception reports or by working on the experiment with an Notice of Variation holder. (GB2RS)

**

INTERNATIONAL CANADA: VO1MRC BACK ON 5 MHZ

And the U-K is not the only place where 5 Mhz is making news. To the norrth, V-Oh1-M-R-C, the Marconi Radio Club of Newfoundland club station, has resumed its experimentation on 60 metres. The permit to comtinue comrs as the result of Radio Amateurs of Canada recommending to that nations radio regulators to grant a request from the club to continue with its work on the 5 MHz band until the end of 2003. (RAC)

**

INTERNATIONAL - SOUTH AFRICA: SA AMSAT ISSUES ITS FIRST EZINE

South Africa AMSAT sayys that it has e-mailed its first electronic newsletter to its members. Called S A AMSAT Ezine, the newsletter is published in Portable Document File format and is available free of charge to South Africa AMSAT members. (ZS6AKV)

**

ON THE AIR: VICTORY AT SEA - HAM RADIO STYLE

In special events, the museum ship the Cassin Young will accompany the USS Constitution as it does its bi-annual turn around cruise and ham radio will be a part of the event. An Amateur Radio station operating as N1S will be on board the Constitution. There will also have a ham station on the pier of the Boston Navy Yard with the callsign N1B. Also on the air will be WW2DD from the Cassin Young and another station on board the USS Chaffee. Operation will be on 40, 20, 17 and 2 meters including an AM station around 7 point 290 MHz. This event is operated by members of the USS Cassin Young Radio Club and the USS Salem Radio Club. More information is on the web at www.qsl.net/ww2dd (W1QWT)

**

ON THE AIR: THE PA QSO PARTY

Also, word that the Pennsylvania QSO Party is scheduled for October 11 and 12th. This year Pittsburgh's Steel City Amateur Radio Club, has been selected as the Special Event station for the annual operation. Because of this every contact with W3KWH will bring 200 bonus points. More information on the Pennsylvania QSO Party is in cyberspace at the website at www.nittany-arc.org/paqso.html . (Via e-mail)

**

DX

In DX, word that G3WQU, is in Timor Leste, formerly East Timor, and active again as 4-W-3-C-W. This, after a break of two and a half months. He will be active for about one year and operates CW only on all HF bands with 100 watts into a vertical. (RSGB)

And G3PMR, is active again from Cyprus as 5B4AHJ from now until the 13th of December. QSL via G3PMR, either direct or via the bureau. (GB2RS)

And mark October 7th to the 12 for the 4M9YY 9th District Venezuela DX-Pedition. The Venezuela 9th. District, is a one of most wanted WPX prefix's worldwide and to give out lots of contacts the group will be active on all bands and all modes from 160 through 2 meter satellite from the city of San Fernando de Apure. QSL direct with a self addressed stamped envelope to the 4M9YY DXpedition, PAKMAIL 10012, P.O.BOX: 025304, Miami Florida 33102-5304 in the USA. More information is in cyberspave at www.4m9yy.com.ve (Via e-mail)

**

THAT FINAL ITEM: A NEW RECORD FOR WI-FI

And finaly, a group of researchers in Poland have set a new wireless LAN or Wi-Fi record. Q-News Felix Scerri, VK4FUQ, has the details:

--

Interline Wireless Technology, a Polish company has reportedly set a world record in stretching the range of a Wi-Fi network for an amazing 110 Kms at 2.4 GHz. They achieved this using an antenna developed by them and an INTEL Wireless Access Point.

The Interline report on their web site www.interline.pl - in Polish - seems to show and say that, on their mountain-top site, in what we would consider "Amateur Radio" field-day conditions, they generated 500mW into a 27dB 1.1m off-axis parabolic section dish. It seems to say that the reverse direction from the base station was 6 watts into a 2.4m dish.

--

And it was all done, ham radio style. (Q-News)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Oh, come on, Jim. What is this "what push" nonsense? The push to remove code testing that so many pro-code test advocates, including yourself on occasion, have been ranting about in this newsgroups for so very many years. As you well know, NCI is only a tiny part of the overall movement to end code testing - far more outside that organization are involved (including some in this newsgroup you've personally discussed this issue with). To now try to move the focus solely to NCI, while knowing full well that so many others are involved, is just not being honest about the situation.

Do you honestly think denying the push to remove code testing will somehow make it go away? Do you honestly think denying the existence of others outside NCI will somehow make them disappear? It isn't going to happen, Jim. The movement to end code testing has never been stronger. To deny that, in light of all that has happened over the last few years, would bring into question a person's sanity.

The Complete Military History of France

- Gallic Wars
- Lost. In a war whose ending foreshadows the next 2000 years of French history, France is conquered by of all things, an Italian.

- Hundred Years War
- Mostly lost, saved at last by female schizophrenic who inadvertently creates The First Rule of French Warfare; "France's armies are victorious only when not led by a Frenchman." Sainted.

- Italian Wars
- Lost. France becomes the first and only country to ever lose two wars when fighting Italians.

- Wars of Religion
- France goes 0-5-4 against the Huguenots

- Thirty Years War
- France is technically not a participant, but manages to get invaded anyway. Claims a tie on the basis that eventually the other participants started ignoring her.

- War of Revolution
- Tied. Frenchmen take to wearing red flowerpots as chapeaux.

- The Dutch War
- Tied

- War of the Augsburg League/King William's War/French and Indian War
- Lost, but claimed as a tie. Three ties in a row induces deluded Frogophiles the world over to label the period as the height of French military power.

- War of the Spanish Succession
- Lost. The War also gave the French their first taste of a Marlborough, which they have loved every since.

- American Revolution
- In a move that will become quite familiar to future Americans, France claims a win even though the English colonists saw far more action. This is later known as "de Gaulle Syndrome", and leads to the Second Rule of French Warfare; "France only wins when America does most of the fighting."

- French Revolution
- Won, primarily due the fact that the opponent was also French.

- The Napoleonic Wars
- Lost. Temporary victories (remember the First Rule!) due to leadership of a Corsican, who ended up being no match for a British footwear designer.

- The Franco-Prussian War
- Lost. Germany first plays the role of drunk Frat boy to France's ugly girl home alone on a Saturday night.

- World War I
- Tied and on the way to losing, France is saved by the United States. Thousands of French women find out what it's like to not only sleep with a winner, but one who doesn't call her "Fraulein." Sadly, widespread use of condoms by American forces forestalls any improvement in the French bloodline.

- World War II
- Lost. Conquered French liberated by the United States and Britain just as they finish learning the Horst Wessel Song.

- War in Indochina
- Lost. French forces plead sickness; take to bed with the Dien Bien Flu

- Algerian Rebellion
- Lost. Loss marks the first defeat of a western army by a Non-Turkic Muslim force since the Crusades, and produces the First Rule of Muslim Warfare; "We can always beat the French." This rule is identical to the First Rules of the Italians, Russians, Germans, English, Dutch, Spanish, Vietnamese and Esquimaux.

- War on Terrorism
- France, keeping in mind its recent history, surrenders to Germans and Muslims just to be safe. Attempts to surrender to Vietnamese ambassador fail after he takes refuge in a McDonald's.

The question for any country silly enough to count on the French should not be "Can we count on the French?", but rather "How long until France collapses?"

"Going to war without France is like going deer hunting without an accordion. All you do is leave behind a lot of noisy baggage."

Or, better still, the quote from last week's Wall Street Journal: "They're there when they need you."

After growing up in metro Philly, I found the Finger Lakes region of New York State much more to my liking. But the job is here.

Great story!

W6AM was one of the first hams to go mobile, back when FCC first issued special "ZZ" licenses. He held the special call W6ZZAM for such work.

> that discussion.

In certain technical matters, perhaps. But in the formation of policy
for the amateur service, why would such experience outside amateur
radio be more significant than another's experience as a radio
amateur?

Should we ask Howard Stern about amateur radio policy? He has
extensive experience in radio *outside* of amateur radio. He has made
millions from his radio career, and has branched out into TV, movies
and books, all of which have been financially successful ventures.

Millions of people listen to him daily, and find him informative and
entertaining.

Why not see what Howard Stern thinks about amateur radio policy
issues.

> Why would you think otherwise, Jim?

I'm not saying that anyone should not be heard. Just the opposite.

I'm simply saying that holding up non-amateur-radio experience as some
sort of credential that disproves the opposing viewpoint of those with
amateur radio experience is faulty logic.

> Len is obviously
> interested in Amateur Radio, which is good.

Whoa, hold on a sec!

The only "interest" Len has shown in the past decade or so is numerous
lengthy postings to a few newsgroups.

Do you consider his attitude and behavior towards those who disagree
with him to be "good"?

Would you want a lot of new hams who behave the way he does?

> The only thing I don't
> understand is why he hasn't acted on that interest and gotten some kind of
> Amateur Radio license over the years.

Perhaps the newsgroups are all the interest he has.

> Since VHF and above is one focus of
> commercial communications today, one would think the Technician license
> would have at least some appeal to him. This glaring, long term, lack of
> committment to Amateur Radio is what brings his ongoing participation in
> this discussion under suspicion.

Which is why I point it out. The Tech license has not had a code test
for more than 12 years. Its written test is not very difficult. It
conveys all amateur VHF/UHF privileges. Yet Len has no interest in it.

> > > You don't want to admit your occupation's firm name or what

> make it so), communications knowledge and experience elsewhere is obviously
> not manditory for participation in this discussion, especially for the
> person holding an Amateur Radio license which will be directly impacted by
> the outcome of this discussion.

There is also the plain, simple fact of Len's behavior when he knows
the employment of someone who disagrees with him.

Is there *any* employment situation that *anyone* who supports code
testing could have that would cause Len to change his position on code
testing? I don't think so!

Is there *any* employment situation that *anyone* who supports code
testing could have that would cause Len to treat that person with
respect? I don't think so!

And so there's no point in *anyone* mentioning their employment here.
So I don't.

I just saw another accusation of Pro-Coders as technically backwards.

Yet some of the most progressive RF Engineers and Technicians I know
(who are Hams) are really enamored of Morse CW.

I would challenge the NCTA's to show some proof that those who believe
that the morse code test should be retained are in a technical backwater.

I would also challenge them to do it without being abrasive or insulting.

Just facts or intelligent informed opinions.

Pro coders can help by refraining from name calling too.

My statement is that there is no direct relationship.

Anyone ready for a real discussion without the barbs? Can we do it?
First person to start throwing insults only makes it look bad for
his/her side.

I sent a courtesy copy of my comments to the author of RM-10808. Here
is his response.

73, de Hans, K0HB

RESPONSE FROM AH0A

Thanks for taking the time to respond, although your last comment was
a bit
strong.

The idea behind the petition was to try to retain some "merit" badge
testing
and a "reward" for learning. I fail to understand why removing Morse
testing is any different from removing all aspects of RTTY knowledge
from
the written test, e.g. "T8A10. What would you connect to a transceiver
for
RTTY operation?". I've taught several courses in the last few years,
and
have come to the conclusion that so many different technologies are
very
difficult to get across in a three week course, and I question whether
it is
desirable to require it.

What is so special about Morse that it requires so much emotion? The
real
issue for those proposing to remove it is they want more Amateurs. If
the
market were growing fast enough, we would not see this much effort. I
felt
that my proposal to remove CW testing for phone privileges, but retain
it to
operate CW would be a compromise. How it could interfere in the
development
of amateur radio escapes me. It is less restrictive than current

rules.

I also thought that moving all testing requirements out of the FCC would
make it more acceptable. The FCC clearly wants to get out of the business
of regulating amateur radio. The question we amateurs need to address is
what are the requirements to get a license? Questions about CW, RTTY, SS,
EME, FM, repeaters, SSB, space communications, emergency communications,
circuits, electric theory, regulations, etc. And which group of amateurs
gets to make the decision?

Anyway I want to assure you I that I put thought into the petition and
sincerely believe that CW testing for CW privileges was a compromise.

Bizarre. I wonder what the "test" for Hellschrieber or the computer modes would be?

> Petitioner further proposes that operation in ARES (Amateur
> Radio Emergency Service) would be restricted to licensees who
> had passed a written examination on that subject.

OY! This person would maybe like to turn Amateur radio into a Fraternity? Signa Fy Nothing?

> Petitioner also proposes that Volunteer Examiners would only
> be required to administer the basic written examinations (elements
> 2, 3, and 4) and could decline to administer any of the proposed
> mode-related examinations if they felt it were burdensome to them.

Okay, so we couldn't operate any other mode besides phone is essentially what he is saying. If we strip mode specific questions, and then VE's only tested for 2, 3, and 4, all the other modes kinda go away, don't they.

And this is yet another time I've heard about the great "burden" upon the VE's. Heck it's a volunteer thing. If its too much work, they can find less burdensome things to do with their time.

> II. Comments:

Agreed with all your comments, Hans.

Mike,

An excellent idea. I for one would be very interested in seeing the
logic and rationale that folks have for keeping or retiring the code
test. By removing the emotion, personal opinion and bias from the
discussion, some quite interesting points may well be raised.

In over 32 years as an RF engineer, I have not had the same experience.
The most technical folks have seemed more interested in the technical
side of ham radio and there have been MANY who I could not recruit
into ham radio because they had no interest in and were unwilling to waste
their valuable time learing Morse to a level that would get them decent
HF privs. (some have capitulated and jumped through the 5 wpm hoop
since "restructuring" and are now extras, but many have refused, on
principal, to jump through the hoop, saying they'll wait until they don't
have to waste their time on Morse)

> I would challenge the NCTA's to show some proof that those who believe
> that the morse code test should be retained are in a technical backwater.

Most of the avid CW ragchewers/contesters I've known over the years
(remember, I'm a long-time ham) have been more interested in the operating
activity (ragchewing, contesting, paper-chasing) than the technical side.
My experience has been that they have been less technically inclined than
a lot of the no-code techs I've met, less inclined to participate in public
service/emergency communications, and more inclined to just being "users"
rather than tinkerers ...

Remember, this is my personal experience, and since it seems to differ from
yours, YMMV ...

> I would also challenge them to do it without being abrasive or insulting.

I think I've met the challenge ...

> Just facts or intelligent informed opinions.

Since there are no authortative, scientific statistics (and probably never
will
be), I think that all you can expect to get are peoples accounting of their
own
personal experiences. Mine are admitedly coming from the fact that I'm "in
the business" of RF engineering ... but through local clubs and ARES/RACES
participation over the past 25+ years, my observations seem to hold, even
amongst contacts/acquaintences/friends who are not "in the profession."
Remember, YMMV ...

>
> Pro coders can help by refraining from name calling too.

We shall see ...

> My statement is that there is no direct relationship.

The evidence is anecdotal will, as I point out, vary from person
to person, depending on their location, profession, the "slant"
of the local club(s) they belong to, etc.

> Anyone ready for a real discussion without the barbs? Can we do it?
> First person to start throwing insults only makes it look bad for
> his/her side.

I think I've taken the high ground ... we'll see how the other side deals
with it ...

It's not govt's legitimate purpose to have "merit badge testing."

> and a "reward" for learning. I fail to understand why removing Morse
> testing is any different from removing all aspects of RTTY knowledge
> from the written test, e.g. "T8A10. What would you connect to a
> transceiver for RTTY operation?".

Clearly AH0A can't understand (or accept) that the RTTY example
is "theoretical knowledge" and the Morse test is a test of a mechanical
skill ... while I don't advocate it, a touch-typing test would be more
relevant to the future of ham radio than a Morse test.

[snip]

> Anyway I want to assure you I that I put thought into the petition and
> sincerely believe that CW testing for CW privileges was a compromise.

It appears that AH0A either did not read the R&O in 98-143 and the
denials of the Petitions for Reconsideration that were filed, or he didn't
understand/accept what the FCC clearly said.

Seems to me that the amateur should be trusted to do the needed work to get on the air with whatever method he or she chooses. The test should reflect the level needed to gain that trust.

For me to get on for example, PSK31, I simply built an interface to connect the computer to the rig. To have to be tested on that would be a waste of time.

Odd that the proposer of that seemed to be worried about how much burden was upon the VE's. his proposal would amount to a huge increase in work for them. But then he seemed to say they could refuse to test applicants except in element 2,3,4!

I agree that the Tech's on average have been more likely to do public
support in my area. i'm also in a University town, so that can skew the
results.

But that's okay as far as my argument goes. As long as things average
out, its consistent with my statement.

True enough. My main purpose here is to see if any of those who declare
that PCTA's are behind the times can come up with anything substantial.

A lie.

You attempted, on several occassions to DENY that "Avery Fine"
was someone OTHER than "Leonard H. Anderson" until your ego over-ran
your situational awareness and you signed an Avery post with "LHA".

In layman's terms, you screwed up.

> Yet you GRASP AT STRAWS in trying to light up a Flame War to

I wasn't argueing about the definition of the term "moldable", really... and
actually influenced would be a bit less condescending and not give you
such an appearance of wanting to be dictatorial... I was putting more
emphasis on the part that said "..into the hams that *we* want them to
be."

...heh, and people a while back took exception to my use of the term
"jack booted CW nazis".

Sure do. Especially the part where YOU ahd anything constructive
to do with "radio" for any period of time in the last five decades,
Lenie.

> Just can't see it like they do. Not even
> a half century ago when I got tossed into the Big Leagues of HF
> communications during a Real service to my country.

"Big Leagues"...?!?!

BBWWWWHHHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHHAHAHAHAHAHAH
A...!!!!!!!

First of all, what "real service" heve YOU done for your country?

You attempt to polish your "CV" by associating yourself with Army
KIA's that became KIA's three years before you went to boot camp.

Despite the long litany of past employers and alleged technical
accomplishments, your ONLY "published work" was in an Amateur Radio
magazine that is now itself defunct.

Your only "licensure" is a GROL left over from a grandfather
clause from yet another 1950's era First Phone ticket, and the only
"station" license you have ever held was one that didn't require
one-second's worth of technical knowledge to obtain...Any 18-year old
who could properly fill out the application could obtain one.

So please, Lennie...Tell us what great contributions YOU have
made to the world of radio...Remember, we are NOT talking about anyone
else except YOU...

> The Real
> future was there back then and that bred even more fantastic futures
> in a wider range of "radio" applications later. Those futures are now our
> present. I'm anxious to see more of what Real imaginations come up

And ya'all failed to underestand that the real point to allthis is that
NONE of the tests are any more valid than the Morse code test!

It could have been put much more simply, IE

"If there is to be no Morse code test because some hams don't intend to
ever use it, why must anyone be subjected to testing on any other mode,
or facet of ham radio, they don't ever intend to use?"

But that wouldn't have made much of a petition!

That would be those engineers who understood the real value of simple, effective, easily implemented baseline communications which can be used from almost anywhere with the least amount of simple equipment imaginable. Carl never did understand any of this, and of course it doesn't match his agenda, so it has no validity to him.

> In over 32 years as an RF engineer, I have not had the same experience.

This would be no surprise, given your OBVIOUS hatred of radiotelegraphy.

> The most technical folks have seemed more interested in the technical

>

Mygawd man, no one in his right mind, having once endured that diatribe, would be eager to have to go through it all over again. You have it programmed into your psyche, if not in a keyboard macro. Naturally they avoided any act or word which would have keyed your internal macro. Who wouldn't?

>
>>I would challenge the NCTA's to show some proof that those who believe
>>that the morse code test should be retained are in a technical backwater.
>

That *might* be a bit difficult given that even Carl, their vaunted leader, is a SSB ratchjaw, not given to even putting a digital HF station on the air, much less doing any "amsteur digital design".

> Most of the avid CW ragchewers/contesters I've known over the years
> (remember, I'm a long-time ham)

Ah, it MUST be pointed out here that your tenure as a longtime ham did not include close connection to *anyone* who was seriously involved in radiotelegraphy in any way. And I know that how? By your actions here! It's completely safe to say that no one would tolarate your attitude as a friend, not likely as even a casual acquaintance, given the lever of vituperation you have always shown toward CW. So what would anyone expect your experience to be??

have been more interested in the operating
> activity (ragchewing, contesting, paper-chasing) than the technical side.
> My experience has been that they have been less technically inclined than
> a lot of the no-code techs I've met, less inclined to participate in public

> rather than tinkerers ...
>

Same old, same old... Make the CW supporters appear to be Luddites-an accusation you have repeated many times here on rrap=-Go googling for the facts if anyone doubts it.

The FACTS are that the CW suppoorters are far most often the users of advanced digital modes. I'd wager that Carl has never been on the air using CLOVER II. I have.

Yes, that would have bought a half-decent ham shack. Or a fairly nice used automobile. New paint for the house. But after a year, five, or ten, what was purchased would be old and shabby.

In ten years, I'll still be able to say that I fought the good fight, got some people to hear what I was saying, and 2100 residents of California thought enough of me and my words to elect me Governor. That will never go away or get dingy.

I came in 30th behind the Governor-elect. That's in the top quartile of those who ran. And 35 million ahead of those who didn't.

Next month I can work a few more hours and buy that ham shack, car, or paint. But I'll never again in my lifetime get a chance at running for Governor.

Bless you all for your kind thoughts...

Jim

> have to waste their time on Morse)

My experience has been different. But let's talk about yours.

First off, with all due respect, I would submit that Carl is perhaps
not the optimum salesperson for convincing people to take code tests
in order to get a license.

Carl's claim, as I read it, is that he knows RF engineers who would
have become hams but for the code test. Some of them have become hams
in spite of that test, or since it was lowered to 5 wpm for all
classes.

The question I ask is this: What does it matter to amateur radio what
a person's job is, unless that person actually uses their job-related
skills for amateur radio? And how many RF engineers will put that
experience to work in amateur radio if the code test is removed that
are allegedly being stopped today?

I remember back in 1990 that this same argument was being used against
the Technician code test. We were told that ham radio would get lots
of new technical folks to push development of the VHF/UHF spectrum,
and that such folks weren't interested in taking code tests. Yet here
it is a dozen years later and there hasn't been any techno-revolution
in amateur VHF/UHF. That doesn't mean there hasn't been progress, just
that there hasn't been massive changes.

Indeed, consider the recent developments in 24 GHz EME. Several
enterprising hams have built stations for that band capable of EME

QSOs (USA to Czech Republic is the current record, IIRC) using only
small (~ 2 meter diameter) dishes and less than 100 watts output from
the TWTs.

And the mode used?

I've found more homebrewers among CW ops than any other part of ham
radio.
>
> Remember, this is my personal experience, and since it seems to differ from

Almost.

You wrote:

"were unwilling to waste their valuable time lear[n]ing Morse"

and

"jumped through the 5 wpm hoop"

which some folks would take as abrasive and/or insulting.

Why not just say:

"were unwilling to spend the time and effort"

and

"passed the 5 wpm test simply to meet the requirement"

?

Is an RF engineer's time more valuable than, say, a doctor's or
lawyer's?

Suppose a doctor or lawyer wants to be a ham, but doesn't want to
spend the time learning all the material in the written tests just to
use a manufactured rig to chase DX. Would you say such a person did
not want to waste their valuable time learning the theory needed for
the Extra test? Or, perhaps, did not want to jump through the written
test hoop?

Well Carl in my personal experience (my own) I am quite good at CW, and spent most of my life in the Electronics field. All self taught (Morse and theory). Never been to a electronics tech school, but managed to make a living in the field for years.

Gee, Dick your hatred of SSB is showing again ... and you failed
Mike's "test" because you resorted to insults.

Besides, I'm active on digital ... how the hell do you profess to
know what modes I'm capable of/equipped for/using?????

At least I can get PSK31 to work ...

One of my best friends, now SK unfortuantely, was a CW op ... worked
as radio officer on ships, was a LL telegrapher when he was a kid. 60 wpm
in his head, while drunk, smoking, and playing poker was no problem for
him. HE understood that CW "wasn't my thing" and we still were friends,
enjoyed other aspects of ham radio together, and had a good time.

Now, I wouldn't expect to be able to have that sort of a relationship
with you, Dick ... you're not open-minded enough to accept that others
see things different than you. (You see, I accept that you like and use
CW ... I disagree only with your propatation of the "Morse myths" and
your insistence that everyone should have Morse forced on them in
exchange for HF privs ... fortunately, most of the rest of the world
doesn't agree with you.)

Carl - wk3c

Why do you insist that getting-a-license is culmination of "interest?"

Explain how obtaining an AMATEUR license suddenly embues one with spirit and verve and "permission" to experiment with RF? Especially when a person is already a professional in electronic design engineering who has ALREADY been working on "experiments" in RF?

A half century ago I began HF communications at a large station operating 24/7 to keep long-distance paths across the Pacific. No need to hold "contests" or have "certificates" of working far-away places...or of being required to use "CW" because it supposedly "got through when no other mode would." Station ADA used RTTY, commercial SSB (12 KHz, 4 circuits), and voice, no "CW."

A couple months ago I used an SGC-2020 on HF while on a friend's sailboat moored in a marina. No license required by me, just with the owner's permission (wasn't a licensed amateur either). I never needed any special license when taking private pilot lessons and using civil aircraft frequencies (my First Phone obtained 4 years prior was fine for that). I've used "radios" and emitted RF from VLF to microwaves without needing ANY radio operator license (done on

government contracts). I won't mention CB earlier because that is supposed to be a heathen sin on HF radio according to all the amateur gurus in here. :-)

>Since VHF and above is one focus of
>commercial communications today, one would think the Technician license
>would have at least some appeal to him.

Dwight, VHF and above was ALREADY a focus of commercial communications a half century ago. I was a military supervisory NCO using General Electric microwave radio relay equipment operating at 1.8 GHz back then. State of the art then. All tubes, 24 voice channels per terminal. In the commercial world of radio, mobile 2-way radio was already out and designer-manufacturers were ramping up to sell them by the tens of thousands at VHF and UHF for both business and government use. Civil aviation radios on VHF were standardized as AM on 108 to 137 MHz by the ICAO in 1955. Television transmitters were already in operation from 54 MHz and up before that. Remote link transmitters for TV mobile use was in the microwaves. ICAO approved UHF glideslope and low-microwave DME radionav standards in the late 1950s.

About 1960 solid-state active devices were appearing on the market for use in all sorts of "radio" equipment in the commercial-government radio market and design and manufacturing really took off there. By 1970 there were all sorts of neat miniaturization going on and I was working on a few of them...too many under development for any one person to work on all of them. The 1960-1970 decade marked the great influx of off-shore designed and built radios for all markets, including amateur radio. Off-shore-made electronics (and radios) would eventually dominate the consumer market (amateur gear put into that consumer market).

Dwight, ALL OF ELECTRONICS (including radio) has been constantly under CHANGE in the last half century. I know it well because I was (and still am under contract conditions) a professional in electronics design...AS WELL AS an electronic hobbyist.

I lost interest in "working DX" or "contesting" back in 1955 when I spent a month at station ADA's Control. When you can pick up a handset and talk to a counterpart in Hawaii or San Francisco stations on any shift just by signalling them to come on line, the "personal exploration-pioneering of DXing" as an amateur pales. Prior to entering the Army I could do maybe 8 WPM of morse. Never had to use that in the Army or since. After working on and with much higher technology radios, there was little impetus to work up any skill of an on-off keying code to meet some 1930s standards in OLD radio.

>This glaring, long term, lack of
>committment to Amateur Radio is what brings his ongoing participation in

>this discussion under suspicion.

"Glaring?!?" :-)

I'm just against a morse code test for any radio operator license, Dwight.

Said that a long time ago and I keep saying so. I don't expect you to
believe me.

I made a true committment over four decades ago to GET INVOLVED
in professional radio-electronics engineering design. I did that. Retired
from it on regular hours but still do some of it on contract.

Morse code skill-proficiency is required to be demonstrated by an
UNLICENSED IN AMATEUR RADIO person for legal permission to
transmit on HF ham bands. I've already transmitted on non-ham HF
bands long ago also just recently, legal and proper.

Morse code testing is required for GETTING INTO ham HF bands.
Such doesn't affect an already-licensed General or Extra and only if
they lapse their ham license renewals. Those AREN'T AFFECTED
except in some personal pride or personal ego way where they need
all the license and trappings to "prove themselves." I've already
proved myself and don't need a federal merit badge or more pretty
papers hanging on a wall.

Morse code testing AFFECTS THE UNLICENSED. Morse code
testing is PART OF POLICY about amateur radio...POLICY about
GETTING INTO it.

Sorry, but I'm not going to buy into HF ham radio licensing being all
about this magical "CW" testing thing, like it is the epitome of ham
qualities. All the exhortations of old stuff about "CW" is the bestest
passed out for years in QST isn't a ruling from any god, radio or
otherwise. Newington doesn't dictate what I care to do for a hobby.
Only the FCC regulates civil US radio.

> This position is equally valid. While a person's communications knowledge
>and experience elsewhere is somewhat relevant (if that person chooses to
>make it so), communications knowledge and experience elsewhere is obviously
>not manditory for participation in this discussion, especially for the
>person holding an Amateur Radio license which will be directly impacted by
>the outcome of this discussion.

Let all explain how they will be so terribly affected by the elimination
of an amateur radio license morse code test...especially when they
already have passed such tests and will never have to take one again.

Let all explain how the already-licensed are the "authority" to which
all others unlicensed in amateur radio must answer. Let them explain
how they became an integral part of the FCC and may thus abrogate
the First Amendment for everyone else.

Let all explain why everyone in the future MUST do as they did and always follow the standards and practices of long ago.

Hey, you don't like some of my comments on the code test. So, what else is new? Do you need instant adulation for the accomplishments of passing a morse test? Special honors? Awards? Sorry, all out.

Try considering that lots and lots of folks sure as hell don't like what the pro-coders are saying, have been saying, or the mythology about certain ways of radio they keep spreading. Already licensed amateurs don't have any special dispensation to act superior just because they exist...and they don't have any authority on any radio matters to stop any other citizen from speaking out in a public-access forum.

This newsgroup is public-access, unmoderated. Some of what you see may not to be to your liking. Hand me your TS card and I'll punch it for this week. Glad to oblige anytime I have free time. :-)

If some hissy-fit superiors are waiting for replies, good luck. Going to be a long wait and a long winter of PCTA discontent ahead. Not my problem.

beep, beep

LHA.

Prior to and just after the IARU decision on S25 policy, ARRL was
ALL FOR CODE TESTING.

That didn't make the NCTA happy.

ARRL still doesn't have any more membership than a quarter of all
licensed US amateurs. I don't believe in coincidences.

Faced with the inevitable worldwide reaction and subsequent action
at WRC-03, ARRL just OPTS OUT, goes neutral, won't take a stand
either way.

Their $12 million income (2002) is at stake. ARRL doesn't exist
without funding. The ONLY people the ARRL is worried about is
the present membership which is skewed towards PCTA thinking.

ARRL membership is still only a quarter of all US licensed amateurs.

They aren't a majority. Their decisions are not a "consensus."

>>Yep, it's outta here, CW testing is soon to be extinct. It's goneski.
>>
>Maybe it is. But if so, it's not because most hams want it to go. And on
>particular, not because young hams want it to go.

Your OPINION, senior.

Do you have any good and true statistical polling to back up your
OPINION?

Strange, the news doesn't indicate any group of young people
demonstrating for the retention of the amateur license code test.
Nor the elimination of the amateur license code test.

Why do you say things about the "young hams" that you know not
of?

Just found out today listening to a local, reputable radio station that Bay, Saginaw and Midland Counties in Michigan are going to be "test sites" for BPL, at least for Michigan. I don't know when it will be an actual reality, as opposed to being in the planning stages, but will keep current with their project!

709. France is conquered by of all things, an Italian.

Newsgroup: rec.radio.amateur.policy
Date: 2003-10-11 03:18:42 UTC
From: BIG********AL*********
Message-ID: <vod1s7rc09dsbc@corp.supernews.com>
Source record: 80237

The Complete Military History of France

- Gallic Wars
- Lost. In a war whose ending foreshadows the next 2000 years of French history, France is conquered by of all things, an Italian.

- Hundred Years War
- Mostly lost, saved at last by female schizophrenic who inadvertently creates The First Rule of French Warfare; "France's armies are victorious only when not led by a Frenchman." Sainted.

- Italian Wars
- Lost. France becomes the first and only country to ever lose two wars when fighting Italians.

- Wars of Religion
- France goes 0-5-4 against the Huguenots

- Thirty Years War
- France is technically not a participant, but manages to get invaded anyway. Claims a tie on the basis that eventually the other participants started ignoring her.

- War of Revolution
- Tied. Frenchmen take to wearing red flowerpots as chapeaux.

- The Dutch War
- Tied

- War of the Augsburg League/King William's War/French and Indian War
- Lost, but claimed as a tie. Three ties in a row induces deluded Frogophiles the world over to label the period as the height of French military power.

- War of the Spanish Succession
- Lost. The War also gave the French their first taste of a Marlborough, which they have loved every since.

- American Revolution
- In a move that will become quite familiar to future Americans, France claims a win even though the English colonists saw far more action. This is later known as "de Gaulle Syndrome", and leads to the Second Rule of French Warfare; "France only wins when America does most of the fighting."

- French Revolution
- Won, primarily due the fact that the opponent was also French.

- The Napoleonic Wars
- Lost. Temporary victories (remember the First Rule!) due to leadership of a Corsican, who ended up being no match for a British footwear designer.

- The Franco-Prussian War
- Lost. Germany first plays the role of drunk Frat boy to France's ugly girl home alone on a Saturday night.

- World War I
- Tied and on the way to losing, France is saved by the United States. Thousands of French women find out what it's like to not only sleep with a winner, but one who doesn't call her "Fraulein." Sadly, widespread use of condoms by American forces forestalls any improvement in the French bloodline.

- World War II
- Lost. Conquered French liberated by the United States and Britain just as they finish learning the Horst Wessel Song.

- War in Indochina
- Lost. French forces plead sickness; take to bed with the Dien Bien Flu

- Algerian Rebellion
- Lost. Loss marks the first defeat of a western army by a Non-Turkic Muslim force since the Crusades, and produces the First Rule of Muslim Warfare; "We can always beat the French." This rule is identical to the First Rules of the Italians, Russians, Germans, English, Dutch, Spanish, Vietnamese and Esquimaux.

- War on Terrorism
- France, keeping in mind its recent history, surrenders to Germans and Muslims just to be safe. Attempts to surrender to Vietnamese ambassador fail after he takes refuge in a McDonald's.

The question for any country silly enough to count on the French should not be "Can we count on the French?", but rather "How long until France collapses?"

"Going to war without France is like going deer hunting without an accordion. All you do is leave behind a lot of noisy baggage."

Or, better still, the quote from last week's Wall Street Journal: "They're there when they need you."

Actually, since there is NO functional or operational testing now
for any other mode but morse, that is pretty much what ending the
only mode functional test (morse) would result in.

If VECs want to add questions to the written pool on the
technological aspects f morse code and the use of morse,
that's fine with me.

Cheers,
Bill

So you're saying Joe filled his petition as a joke or
to be sarcastic then. Not a nice thing to do to the
FCC if that was his intent...which I don't believe
was his intent.

Cheers,
Bill K2UNK

And with this very sad announcement, Ham Radio is truly DEAD.
(well....mabey not, but we've lost a BIG chunk without 73)

Wayne and his magazine was without doubt ham radio's most
amusing read. His Editorials were always right on target - often
his prognostications were YEARS ahead of their time.

I hope he makes an appearance on Art Bell's show to discuss
the 73 Magazine demise and other commentary soon!

Carl, with all due respect, using abrasive and derisive terms like "jumping through hoops" is not "the high ground". It is your same old baiting and condescending rhetoric, seemingly calculated to be inflamatory and divisive.

I don't mourn the end of Morse testing, but I recognize the fact that many honorable folks disagree with me, and I try to treat their opinions with respect.

With all kind wishes,

de Hans, K0HB

Leo,

The whole discussion and every possible argument pro/con on code testing
has been reviewed in the comments filled under NPRM98-143 as well as
several other past FCC reviews.
In the 98-143 R&O which came from all those comments,
the FCC found not one reason of
sufficient cause to retain any code testing...EXCEPT, at that time, the
ITU treaty still required code testing for hams permitted under 30MHz
operation.

As of July 5, 2003 the ITU treaty changed and ended mandatory
morse testing completely...leaving any decision to have any morse testing
that of each individual country.

Given the end to the ITU treaty requirement and coupling that with the
prior findings of the FCC R&O for 98-143, the only conclusion one
can have is that...absent anything NEW in the arguments, the FCC
should now remove all morse testing.

People can argue with the past FCC findings, but nothing being
offered now is anything that the FCC hasn't heard before. Add to that
the fact that other administrations have already ended code testing
since July 5, 2003 one can also conclude that it isn't likly that the
USA will retain code anymore. In the end, it is not a matter of IF, but
more
simply WHEN.

Cheers,
Bill K2UNK

Then I guess the many other services which, at one time, did use morse
(i.e. military, marine, etc); but ended its use some time ago didn't
have the engineering folks that "understood the real value...."

The issue is one of personal choice, not need, as to ever using morse
anymore. At best, there is but a handful of anecdotal references to
morse being claimed as being "the only mode usable" under some
actual emergencies. Those that claim morse is needed for emergencies
fail to show any reliance on the mode in the vast (probably 90+ percent)
domain of those organizations (RACES, ARES, etc) that actually
put in place teams of operators, stations and portable equipment.

> > In over 32 years as an RF engineer, I have not had the same experience.

Unfortuneately, extremist comments are present on both sides.

> Yet some of the most progressive RF Engineers and Technicians I know
> (who are Hams) are really enamored of Morse CW.

Nothing wrong with that. The issue isn't about USE it is about
the lack of any rational reason to retain code testing as a
license requirement now that the ITU mandatory code knowledge
requirment has ended.

> I would challenge the NCTA's to show some proof that those who believe
> that the morse code test should be retained are in a technical backwater.

It isn't that the individuals that want code retained are in a technical
backwater, but rather that their procode test arguments fail
as to any technical reason for retaining code testing. On that point,
don't take my word on it, read the FCC R&O on NPRM98-143
and you'll find every argument being put forth today has already
been made to the FCC and rejected by the FCC.

> I would also challenge them to do it without being abrasive or insulting.

Feel free to let me know if I fail that challenge.

> Just facts or intelligent informed opinions.

As above, for the facts and the ultimate opinion (the only
opinion that in the end means anything) can be found in 98-143 R&O.

> Pro coders can help by refraining from name calling too.

Agreed.

> My statement is that there is no direct relationship.

Not sure what relationship you are referring to.

And there *you* go again. No one has ever even suggested that any
other entity use morse in place of more advanced modes. Maybe you in
Joisey will never find yerself in circumstances where you could well
make use of it. Others have clearly demonstrated otherwise, but your
agenda will not be penetrated by so mundane a thing as a fact.

What that says is that never again shall any significant use of
radiotelgraphy *ever* again see a need arise. And that clearly is a
possibility. Just as much a possibility as the impossibility of what
happened on Sept 11, 2001 seemed in advance of that date. QED.

So where is that fact in the comments before the FCC now or in
the 98-143 comments. Whatever few claims may have been
made they failed to convince the FCC of being of sufficient
occasion(s) or impact to retain code testing. Reminds me of the
anti-raise the speed limit crowd who would argue that 55mph
should be retained if it saves but one life. that's nothing

but an emotional argument that doesn't hold sway with the bottom line
risk/reward analysis we alkl make every day we go out into the world.

The PCTA folks argue CW is needed "just in case" yet the "case"
is all but nonexistent or of such low volume that the economics
or mandating a requirment "just in case" doesn't make sense except
when the argument is to the extreme of...even if it is only used
or needed once in a great while.

Since it is likly you've never engaged Carl in and direct
conversation I find your claim he is or would be "ranting
and raving" about anything.

"Ranting"?

Perhaps I could have worded my post better.

My point is that the whole issue is not a mass movement. Clint claimed, without any proof, that most hams want code testing gone. Yet surveys show the opposite.

The fact remains that out of over 680,000 US hams, fewer than 1% have joined NCI.

>As you well know, NCI is only a tiny part of the overall movement to end
>code testing - far more outside that organization are involved (including
>some in this newsgroup you've personally discussed this issue with).

How do we know this?

The restructuring NPRM gathered fewer than 2500 comments, even though the comment period was extremely long and the whole thing given lots of publicity in the amateur press.

Compare that to how many comments the NOI on BPL has gathered in a much shorter time.

>To now
>try to move the focus solely to NCI, while knowing full well that so many
>others are involved, is just not being honest about the situation.
>
Who are "so many others", Dwight? If they really exist, why haven't they signed on to NCI, which costs nothing more than a few mouse clicks?

> Do you honestly think denying the push to remove code testing will somehow
>make it go away? Do you honestly think denying the existence of others
>outside NCI will somehow make them disappear? It isn't going to happen, Jim.

I'm not denying any of that. Sorry if it seemed that way.

>The movement to end code testing has never been stronger. To deny that, in
>light of all that has happened over the last few years, would bring into
>question a person's sanity.

How about the claim that most hams want it, despite all the surveys showing the opposite?

And if it's such a done deal, why didn't FCC just dump Element 1 back in July?

>have to waste their time on Morse)

Carl:

Now, there's classic NCTA logic for you! You and your fellow
professional RF engineers, with your "code testing as a hoop"
mentality, have actually wasted more time by *not* learning the
code and passing the code tests than you have saved. For one
thing, as ham radio history has proved many times, those of
you who made the attempt to learn the code and upgrade through
the progressively higher-speed code tests may have very well
become enthusiastic CW operators, and ultimately, PCTA's.
All you've done is demonstrate that even professionally-qualified
electronics technicians and engineers can be just as lazy and
unmotivated to learn a useful communications skill as a truck
driver whose main RF experience is on 11-meters.

>> I would challenge the NCTA's to show some proof that those who believe

My experiences would seem to be the polar opposite of your own, and for
the exact same reasons. Yes, MM does V.

>> Pro coders can help by refraining from name calling too.
>
>We shall see ...

Well, so far, I seem to have violated that injunction, since I have indulged
in calling NCTA's "lazy." However, I consider that to be honesty, not
name calling. Therefore, in fairness, that needs to "slide" as well.

>> My statement is that there is no direct relationship.
>
>The evidence is anecdotal will, as I point out, vary from person
>to person, depending on their location, profession, the "slant"
>of the local club(s) they belong to, etc.

Agreed. However, my own experience is that technically involved
no-coders also tend to be reticent to indulge in stating their opinion
about code testing. It is the ones who just want a microphone in
their hot little hands who seem to be all worked up about it.

>> Anyone ready for a real discussion without the barbs? Can we do it?
>> First person to start throwing insults only makes it look bad for
>> his/her side.

>
> My statement is that there is no direct relationship.

Mike:

Your statement is correct. The connection between code testing/use
and technical insufficiency among radio amateurs is one of the most
specious, improbable, and self-serving arguments ever contrived by
the NCTA.

> Anyone ready for a real discussion without the barbs? Can we do it?
>First person to start throwing insults only makes it look bad for
>his/her side.

Speaking from personal experience, the hams I've known who were the most
likely to be technically involved were also those who both embraced the use
of the Morse/CW mode, and supported the concept of code testing as a
licensing requirement. They were always the ones most active on the air,
not only on HF but on VHF as well -- and I mean weak-signal VHF, not FM.

I have also known a lot of highly technical "no-coders," but their contribution
was mainly in the arena of FM repeaters. However, they have, for the most
part, been unconcerned about the code testing issue, since they had no
aspirations to operate HF. I highly value their efforts, and consider them to
be full-fledged hams. This assessment is strengthened by the fact that they
left themselves out of a debate over a topic they knew little or nothing
about.

The whole ball of wax boils down to one thing -- the willingness of a certain
group of prospective hams to meet licensing requirements which support
the learning and use of what is unquestionably one of the most versatile and
useful modes of radio communication -- CW using Morse code. Since the
ability to effectively employ this mode holds the unique requirement that the
operator acquire a physical skill, and considering the fact that many other
modes which do not levy this skill development "overhead" exist, has caused
many people to vent their frustration at this requirement, rather than make an
honest attempt to overcome it. In so doing, they have tried almost every
trick in the book, including the "code = technical decline" argument.

One cannot ignore that the principle motivation of the NCTA is just plain,
old-fashioned laziness. This is a human trait, and we are all guilty of it, to
some extent. That is not a "barb," it is just honesty. I consider myself
qualified to make that judgment, since I squandered what is now 28% of
my lifetime being on the wrong side of the code/no-code testing ideology.
My problem was I was too lazy to be bothered to learn the code and

become a licensed radio amateur. When my desire to become a ham finally overcame my laziness, everything else fell into place in very short order. The sooner we recognize the true motivation of the NCTA, the sooner they will be shown to be wrong.

"jumping through hoops" is "abrasive and drisive" ??? You must have
REALLY thin skin Hans.

> I don't mourn the end of Morse testing, but I recognize the fact that
> many honorable folks disagree with me, and I try to treat their
> opinions with respect.

I accept that some disagree with the elimination of Morse testing
as a requirement for access to HF ... it is their reasons for disagreeing
that I disagree with, cannot support because they are illogical and
inaccurate, and I resent their condescending attitude that "nobody
is/or can be a 'Real Ham' without being Morse proficient.

BTW .. I liked your comments on the Speroni petition ... and
I didn't accuse you of being abrasive with the bit a the end about
"casting it aside with great force" or whatever the exact wording
was.

Larry,

I don't recall Mike appointing your the judge and arbiter ...

"Morse Myths" is, as you well know by now, simply a term
that refers to all of the patently false, old wives' tales, such as
"Morse gets through when nothing else will.", "Morse is essential
for emergency communications.", "Morse acts as a 'lid filter' to
keep us from being overrun by the "mongul hordes' of CBers
who are lurking in the wings waiting to take over the ham bands."
etc.

I reject your claim that the term "Morse Myths" is derogatory and
inflamatory. It is simply a term that refers in "shorthand" form to
a panoply of falacies that are often cited as "reasons why we MUST
keep Morse testing" ... none of which hold water and all of which
have been rejected by the FCC.

Carl - wk3c

No, those who chose not to jump through the hoop wasted NO
time ... they devoted their discretionary time to other technical
pusuits without required hoop jumping ... a loss to the ARS.

A modest percentage, perhaps, but those folks would likely
have given Morse a try and become Morse enthusiasts without
having been forced into it by a test requirement. And while
some may have become Morse enthusiasts voluntarily, that
does not mean that they would have become PCTAs, seeking
to force Morse on everyone.

> All you've done is demonstrate that even professionally-qualified

Have you considered the possibility that those technically involved
no-coders are reluctant to subject themselves to being called
'knuckle-draggers" and "cb-plussers"???? (the sort of abuse that
at least the more vocal in the PCTA, including yourself, dish out)

I have to agree with Jim's ???... Jim has never been one
to "rant."

> Perhaps I could have worded my post better.

I didn't see anything "ranting about it."

> My point is that the whole issue is not a mass movement. Clint claimed,
without

>
> The fact remains that out of over 680,000 US hams, fewer than 1% have
joined
> NCI.

So? The issue isn't to be decided by some unilateral vote of
only licensed hams. The issue is one of appropriate regulatory
test requirements.

> >As you well know, NCI is only a tiny part of the overall movement to end

shorter
> time.

One could also argue that most hams don't really care that code testing
ends...certainly not enough to file comments that indicate a desire
to keep code....and probably because they know the end result
is only a matter of time.

> >To now
> >try to move the focus solely to NCI, while knowing full well that so many

The "push" has certainly been far more than just NCI. If it
was only NCI, how do you explain the ITU treaty change by
with not one vote against the change...and how do you explain
the IARU possision...again, almost a unanomous set of votes in
each region except for a couple of no votes and abstentions.

> >The movement to end code testing has never been stronger. To deny that,
in

showing the
> opposite?

The FCC doesn't care about percentages...and it shouldn't. See above
my comment about the decision being what is proper test requirments as
opposed to what any majority of hams may want. Additionally,
I never saw any true survey that could be justifiable stated as
accurately reflecting ALL hams.

> And if it's such a done deal, why didn't FCC just dump Element 1 back in July?

Process. Better in the government mindset to open the comments and see what comes forward. So far, NOTHING new has been offered by PCTAs that hasn't already been sifted through and discounted by the FCC in prior reviews (e.g. NPRM 98-143 primarily).

Without doubt, absent the treaty requirement, the ball is totally in the PCTA's court to justify keeping any code test...and so far there's nothing new.

Cheers,

I consider my time a very valuable resource as do many others.
Wy is a comment which describes time wwasted by people who
don't wish to expend it learning morse considered uncomplimentary?

> "dinosaur/buggywhip technology"

Me thinks as the end approaches...the PCTA side is grasping
at straws. I suggest not playing in the political arena of change if
such phraseology offends.

Actually, with friends like WA8ULX, the PCTA folks don't need any
enimies as such personal attacks discredit the PCTA position very well.

The reality is that personal attacks rather than comments
(acrimonius or not) about morse or any other mode are significantly
different. If I consider FORDS to be a crap automobile, that
is considerably different than calling FORD OWNERS "knuckle
draggers".

I thought the thread was about Pro Code Test folks, not Pro Code User folks. Your "official position" is that you have nothing against Morse use, only Morse testing, yet your diatribes invariably bring into question the technical competence of CW contesters and DXers. How about Phone contesters and DXers --- are they more technically competent than CW contesters and DXers? If not, then your argument is exposed as based on your own biases, not on the facts.

I don't support the continuance of Morse testing, but I damned sure intend to continue to support USE of Morse.

All of that aside, your premise that contesters and DXers are below average in technical inclination doesn't align very well with reality. Perhaps you belong to the wrong clubs. Contesters and DXers are historically at the forefront of pushing improved technology, especially in receiver design, antenna design, and integrating computerized technology into their station design. The only remaining viable manufacturer of HF radios in the US is TenTec, a company founded and run by avid DXers/contesters, and catering to their needs. "Force 12", the current leader in HF antenna technology is owned by avid contesters. DigiKey, the electronics distributor was founded by fellow members of the University of Minnesota Contest Club, mostly electrical engineering students. (They got into business designing and selling electronic keyers, hence the name.) Ron Stordahl, N5IN, was one of the founders and still heads the company which is a major employer in the city where it is based. All this from an avid CW contester and electronics engineer.

By the way, my company just completed successful field trials of SDR (Software Defined Radio) technology. (See http://www.adc.com/investorrelations/newsandcommunications/newsreleases/show.jsp?RELEASEID=119340) Many of the leading people involved in the project are hams who are also (choke) CW (and Phone) contesters.

I have to disagree with John. The loss of 73 magazine is a very minor
event in the history of amateur radio. On the other hand, the loss of
"Ham Radio Magazine" 10+ years ago was truly a tragic loss to amateur
radio. Compared to "Ham Radio Magazine", 73's technical articles were
generally trivial and often didn't follow good engineering practice.
Often, the construction articles would not work as described and most
mistakes were never corrected.
Although some were entertaining, I found Wayne Greens editorials to be
sensational and they contributed nothing to the community or the radio
art.
I'm sorry to see any amateur radio publication fail but I don't think
the loss of 73 will amount to much in the total scheme of things.

I remember when Wayne was trying to get rid of the top two megs of 2 meters.
146 to 148 Mhz. Because it wasn't being used and served no purpose.

Shortly thereafter FM came along and the 'rest is history'.

I dropped his rag years ago.

Re: 73 MAGAZINE SAYS "73 AND QRT"

Sad, in a way. But how much of 73's problems were caused by the shrinking world of hamdom in the U.S., and how much was caused by the reduced segment of ham subscribers caused by the narrowness of the self-proclaimed "El Supremo and Founder" Wayne S. Green II, W2NSD?

Over the years, I subscribed and had two articles published in 73 - an honor that paid. But Wayne didn't like us brain-damaged extras and berated CW operators at every opportunity. Hey, I could take that. But, then he didn't like contests either, so Wayne refused to publish contest information in his magazine. Those of us that wanted to know what contests were on, or at least what exchange was expected on contest weekends, had to take another publication to find out. By the time I stopped subscribing to 73, it had become a mostly no-code VHF enthusiast's publication - with the downbeat editorials of Wayne Green providing much of its contents. I still hate seeing
73 Magazine go down for good, even though I also wonder how it managed to stay in print as long as it did.

Hang in there CQ. You too, QST.

Hans ... read Mike's post ... *he* raised the issue of Morse USERS vs.
those who don't use Morse ... I merely related my personal experience
in that stated context.

> Your "official position" is that you have nothing against
> Morse use, only Morse testing,

I don't ... but I also don't agree with the claim that Morse users
are more technically astute than non-Morse users. That was what
I was addressing and it was responsive to the question/context.

> yet your diatribes invariably bring

I don't think my relating my personal experience was a "diatribe."
Give it a rest Hans.

> into question the technical competence of CW contesters and DXers.
> How about Phone contesters and DXers --- are they more technically
> competent than CW contesters and DXers? If not, then your argument is
> exposed as based on your own biases, not on the facts.

No, my comment was not based on bias ... I clearly stated it was based
on my personal experience and "YMMV."

> I don't support the continuance of Morse testing, but I damned sure
> intend to continue to support USE of Morse.

Then we are in the same camp ...

I didn't say *all* CW enthusiasts, contesters, and paper chasers were
non-technical ... I just related my own personal experience ... which
varies from yours. (sheesh ...)

And one of the founders of the company, who is a friend and colleague of
mine
now, is a no-code tech (I persuaded him to get into ham radio. He has NO
interest in Morse, but is a hell of a digital modes engineer.)

>Very interesting, indeed.

Yep. Remember, though, that those are the results of a scientific survey done in 1996.

It does, however, contradict the claim that young people don't want to take code tests.

Even if it can be shown that the majority of hams and other interested parties favor continued code testing, there's no obligation for FCC to follow that majority.

A majority of those who commented to FCC on 98-143 wanted *at least* two code test speeds. But FCC went to 5 wpm for all classes of license and set the stage for complete code test elimination.

>This could provide excellent support to replies
>to the code testing petitions recently assigned RM numbers by the FCC.
>Can you provide a URL?
>
It was in QST back in 1997. If it's online anywhere, it should be on the ARRL website.

In the USA, yes. But back in early 2001, ARRL changed policy on S25.5 and no
longer supported its continuation in the treaty..

>
> That didn't make the NCTA happy.
>
> ARRL still doesn't have any more membership than a quarter of all

NCI membership is less than one percent of licensed US amateurs. Even though
membership is free and requires only a few mouse clicks.

> Faced with the inevitable worldwide reaction and subsequent action
> at WRC-03, ARRL just OPTS OUT, goes neutral, won't take a stand
> either way.

ARRL policy is made by representatives of the membership. If the membership is
divided on an issue, a neutral policy may be the only solution.
>
> Their $12 million income (2002) is at stake. ARRL doesn't exist

>
> Your OPINION, senior.

No, simple fact, backed up by scientific survey. And the comments to 98-143.
>
> Do you have any good and true statistical polling to back up your
> OPINION?

Yes!

The ARRL/READEX survey showed that a majority favored code testing, and that
the youngest age group was the most strongly procodetest.

The comments to 98-143 were categorized by an NCI staffer (disproving any
possible claim of bias by procodetest evaluation of the comments) and the
resutls showed that the *majority* of commenters not only wanted continued code
testing, but wanted at least 2 code test speeds. This was true despite an email
campaign by NCI to get as many comments in support of their position of 5 wpm

and sunset clause.

Of course things may have changed since then. But for someone to claim, without more recent evidence, that most hams want code testing to disappear is simply wishful thinking.
>
> Strange, the news doesn't indicate any group of young people

>skill ...

You mean "a practical skill".

Both are valuable to the radio amateur. Whether either should be tested is a
matter of opinion, nothing more.

But if a person has no interest in RTTY, why should that person be subjected to
questions on the subject?

Why can't a ham be trusted to learn about RTTY if/when the desire to use that
mode arises? RTTY is "just another mode", is it not? There's no requirement for
any ham to ever use it.

> while I don't advocate it, a touch-typing test would be more

Why touch-typing? Isn't hunt-and-peck good enough?

5 wpm code is like being able to hunt-and-peck type at 10 wpm, not
touch-typing.

>[snip]

Or maybe he just disagrees. FCC's decisions are simply FCC opinion, not some
form of absolute proof. (Note what has happened to FCC's decision on broadcast
media ownership rules. While something like that won't happen to the amateur
rules, it proves the point).

Of course it's clear from FCC actions that any petition that *increases* testing complexity is going to have a very very small chance of being acted upon by FCC.

That's quite a story, Carl, since the company was founded in 1935 by Ralph Allison. That would put Ralph up in his 90's somewhere. Well, it's good to know he's still in engineering and keeping up with the latest trends. Give him best regards from everyone at ADC. We were under the mistaken impression that he had passed on.

"Editorials"...?!?! You mean acidic rants, perhaps?

Many of his "prognostications" were echos of professional
engineering journals, presented in such a way as to wow and awe the
Amateur community that otherwise was unaware of those writings.

> I hope he makes an appearance on Art Bell's show to discuss
> the 73 Magazine demise and other commentary soon!

They'd go well together.

Something else I don't remember saying. However, since you seem to want to
discuss Len's attitude and behavior, what exactly are you referring to?
After reading some of the garbage posted by some in this newsgroup, I don't
see anything from him that stands out as particularily extraordinary. Of
course, perhaps you're more sensitive to what he says because it is often
targeted towards those who share your opinions.

I don't think it was Wayne that wanted to recycle the top of 2 meters,
though I think Popular Electronics proposed it in the late sixties.

In the early seventies, Wayne proposed a license that used the top portion
of 220MHz. He proposed that it be an amateur license, but with little or
no exam, but it didn't have much connection with ham radio. He did
claim that 220MHz was underused, and it was a the time, which is why
the EIA wanted the same slice of the spectrum for the "Class E Citizen
Band".

Well, it must be the week to put words into other people's mouths. First Jim and now you, Len. Anyway, I didn't "insist" any such thing. Instead, I simply said I don't understand why you haven't gotten some kind of Amateur Radio license over the years.

> > Since VHF and above is one focus of commercial
> > communications today, one would think the Technician

I didn't say it wasn't, Len. Instead, I simply said that this (commercial communications today) might be one reason the Technician license would have at least some appeal to you.

> > This glaring, long term, lack of committment to Amateur

Your opposition to code is no barrier whatsoever to getting a Technician license, Len.

> (snip) Hey, you don't like some of my comments on the
> code test. So, what else is new? Do you need instant
> adulation for the accomplishments of passing a morse test?
> Special honors? Awards? Sorry, all out.

Well, in this case, the "what else is new" is that you obviously haven't noticed which license I hold. Since I haven't passed a Morse code test, no adulation, honors, or awards, relating to that would be applicable. Further, I don't particularily like or dislike anything you've said about the code test. I've taken no position whatsoever on your comments. I'm opposed to the code test, but that doesn't mean I specifically endorse anything you've said on the subject.

> This newsgroup is public-access, unmoderated. Some
> of what you see may not to be to your liking. (snip)

My, you are reading a lot into what I've said, and getting it all wrong in the process. Absolutely nothing I said had anything whatsoever to do with whether I liked or disliked anything you've said. Take the chip off your shoulder, and re-read what I said, and I think you'll agree with that.

By the way, if you reply, do try to keep it short - I don't have time to respond to a long-winded rant (my only real comment about what you've said).

I think you're focusing on the wrong issue, Mike. When discussing the retention of code testing, the real issue is how doing so futhers the basis and purpose of Amateur Radio. The FCC has framed this several times. For example...

"We are persuaded that because the amateur service is fundamentally a technical service, the emphasis on Morse code proficiency as a licensing requirement does not comport with the basis and purpose of the service. We note, moreover, that the design of modern communications systems, including personal communication services, satellite, fiber optic, and high definition television systems, are based on digital communication technologies. We also note that no communication system has been designed in many years that depends on hand-keyed telegraphy or the ability to receive messages in Morse code by ear. In contrast, modern communication systems are designed to be automated systems. Given the changes that have occurred in communications in the last fifty years, we believe that reducing the emphasis on telegraphy proficiency as a licensing requirement will allow the amateur service to, as it has in the past, attract technically inclined persons, particularly the youth of our country, and encourage them to learn and to prepare themselves in the areas where the United States needs expertise." - FCC WT Docket No. 98-143 RM-9148 RM-9150 RM-9196

As you can see, none of this focuses on the individual people opposing or supporting code testing. Instead, it focuses on what furthers the basis and purpose of Amateur Radio. If others focused on the same, there would perhaps be far less hostility in the discussion.

Go to the sites. Check out the interference. If it's as bad as they say, write the local commercial radio stations to say they are being interfered with, write your congressman, and write the FCC.

73 Mag published my one and only article (in the 80s). While it's a shame to see any ham-related business fail, it's not surprising in this case. I had a subscription to 73 this past year (it was actually a mistake. I subscribed to CQ via a subscirption service, and they sent me 73 in error). The articles were of little content and the editorials were pure fantasy and the rants of a madman off his Thorazine.

I certainly haven't seen a survey recently that could be said to accurately represents the views of the entire ham radio community, Jim. I believe you recenty posted the results of a survey done by some club that shows the majority surveyed supported code testing. I don't doubt those results at all. If you surveyed the local club here (and their friends outside the club), the majority would also support code testing. Of course, the club members here are fanatics in their support of code testing, even to the point of openingly ridiculing Technicians who attend the meetings. Because of that, few who oppose code testing, and even fewer Technicians, attend that club's meetings or socialize with the members. Find me a survey that is truly unbiased and I'll be glad to discuss the results. Until then, discussing the results of surveys is simply a waste of time.

> > you've personally discussed this issue with).
>
> How do we know this?

How do you know what? That you've talked to people in this newsgroup who are not NCI members yet are still opposed to code testing? I suspect the vast majority of those in this newsgroup who oppose code testing are not members of NCI.

> Who are "so many others", Dwight? If they really exist, why
> haven't they signed on to NCI, which costs nothing more than
> a few mouse clicks?

What is it with your obsession with NCI? Are you campaigning for members or something? There is no requirement whatsoever that says those who oppose code testing must join that organization. I haven't joined it. Neither has my wife. In fact, I don't know anyone personally who is opposed to code testing who has joined. Of course, there are many organizations in this country I haven't joined. Therefore, NCI is certainly nothing special in that regard.

> And if it's such a done deal, why didn't FCC just dump Element 1
> back in July?

As you well know, the FCC has rules and regulations to follow, Jim.
Because of that, they can't "just dump" anything. Something will happen
sooner or later. Give it time.

I'm gonna miss my copy of 73 in the mail each month. Wayne is a genuine American legend. Off the wall, often mistaken, often over the edge, but always stands up for his position regardless of how goofy it seems to the rest of us. I rarely agreed with him, but I always admired his good natured poking at the pompous among us, and his absolute support for the causes which he believed in, regardless how unpopular.

I hope the old rascal figures out a way to start another magazine.

Therein lies the problem with the whole CW test (TEST, *test*) debate. The minute one takes on the "no" CW test argument, it is generally met with an attitude that an end CW use (USE, *use*) is being favored or called for.

Until, (UNTIL, *until*) it is clearly understood that seeking the end of the CW test is not the equivalent of seeking the end of CW as a mode, this debate will never fall within the realm of "friendly" debate at all. I think it's even hazardous to use the PCTA/NCTA labels.

It was Wayne Green. It was in the early sixties. At least that is where I
read it. I took 73 for two years. Must have been 62-64 or so.

By the time I got back from Asia, 146.94 was 'the' FM spot on the 2 meter
band. About 79 or so.

I don't know if that will happen, Hans. I remember 73 (and Hot CoCo) from the early 80s and they were *huge* magazines. Unfortunately, I feel that amateur radio (and cb) are slowly going the way of these newsgroups. More bickering (and nastier) every day. I've had many a chuckle over Wayne's editorials and did subscribe a few years back. 73 had shrunk tremendously and I remember QST as being a bit more rounded back a few decades ago too.

I think I'll agree with you on hoping that Wayne figures a way to start up again. You can bet he isn't gonna roll over and play dead :)

Hey Jim you forgot the "old manual transmission saw" ....BTW I can't wait for all the leaps and bounds in growth of the service once CW testing is gone. I would venture to say that at least a half a dozen new modes will be created within a few months now that all of those EEs will be "activated". I would even say that I would have to eat crow as no doubt within 1 year a mode will be discovered that "will always get through". On the serious side ...I feel a bit sad that people, for whatever reason, won't get to enjoy an "avocal" means of communication utilizing the computer that the we all have.

It's not going to happen, this has nothing to do with money.

Maybe Wayne frittered it away, but twice he sold off magazines and
got a lot for them. Twenty years ago, he sold the computer magazines
and 73 to IDG, and became a millionare. He later sold his CD magazine.
Unless it was all spent, some late payments would not stop the magazine.

Wayne is over eighty. The magazine has been in decline for some years.
They cut back circulation some years back, too. I enjoyed reading what
Wayne had to say, until the past decade or so, when he was repeating
himself and getting into weird areas, like "the moon landing was a hoax"
and all the junk medicine stuff. I think that sent a fair number of readers
away, when his previous "muckraking" did not. The last time I saw the
magazine, it was arriving on the newsstand sporadically, it had
gotten pretty thin, there were a lot of blatant errors, a lot of the old
authors were no longer around, and there wasn't much of interest there.

If the magazine had been in good shape, he wouldn't have made the decision
to stop publishing. A little glitch, and he's had them over the years,
would not stop Wayne Green. But there isn't anything there to salvage.

I mean "average honor roll high school student", not "Einstein's
grandson". Also
I mention the honor roll student in the sense that Beavis and Butthead
would not be
able to pass the license tests. If Beavis did get a license, then ham
radio would
sound like the old 147.435 machine on L.A..... W6NUT IIRC

A CC list for complaints:

*Utility company
*FCC (radio, telecom, and cable depts)
*ARRL
*your congresscritter
*your senator
*your state's PUC (public utilitues commission)
*The senators or congressmen who fund the FCC
*Various broadcasters, particularly those on TV
channels 2, 3, 4 (as these are below 80MHz, the
high end of BPL). Also any shortwave broadcasters
in the USA except VOA (they are not allowed to care
about reception inside the USA).
*NTIA (who we share the 5MHz band with).

> I certainly haven't seen a survey recently that could be said to
>accurately represents the views of the entire ham radio community, Jim.

Neither have I, Dwight. As I have pointed out, the ARRL/READEX survey is 7 years old. But it's the most recent *scientific* survey we have. (Its 1500 respondents were chosen at random, not self-selected as is the case in many "surveys".)

> I
>believe you recenty posted the results of a survey done by some club that
>shows the majority surveyed supported code testing.

Not "some club". ARRL hired READEX (a professional survey organization) to conduct the survey in preparation for WRC 1997.

>I don't doubt those
>results at all. If you surveyed the local club here (and their friends
>outside the club), the majority would also support code testing.

The ARRL/READEX survey sampled the entire country and all license classes and age groups. Surveying club members doesn't.

>Of course,
>the club members here are fanatics in their support of code testing, even to
>the point of openingly ridiculing Technicians who attend the meetings.

That sort of behavior is unacceptable. Not "real ham" behavior.

>Because of that, few who oppose code testing, and even fewer Technicians,
>attend that club's meetings or socialize with the members. Find me a survey
>that is truly unbiased and I'll be glad to discuss the results. Until then,

>>
>> How do we know this?
>
> How do you know what?

How do we know that there are "far more outside that organization..involved"?

I see the same small number of people in this newsgroup, at qrz.com, eham, etc.

>That you've talked to people in this newsgroup who

>are not NCI members yet are still opposed to code testing? I suspect the
>vast majority of those in this newsgroup who oppose code testing are not
>members of NCI.

Most of those opposed to code testing I have encountered here *are* members of NCI. But there are really not that many on either side who post here. How many different people have posted to rrap in the past year?
>
>> Who are "so many others", Dwight? If they really exist, why
>> haven't they signed on to NCI, which costs nothing more than
>> a few mouse clicks?
>
> What is it with your obsession with NCI?

No "onsession" at all. I'm just curious as to why someone who felt strongly or even mildly that code testing should go would *not* join that organization. Particularly given the ease of doing so. And particularly given the fact that if the membership numbers got big enough, a majority could be claimed based on those numbers alone.

>Are you campaigning for members
>or something?

Just the opposite ;-)

>There is no requirement whatsoever that says those who oppose
>code testing must join that organization. I haven't joined it. Neither has
>my wife. In fact, I don't know anyone personally who is opposed to code
>testing who has joined. Of course, there are many organizations in this
>country I haven't joined. Therefore, NCI is certainly nothing special in
>that regard.

That says nothing about how many actually are opposed or support code testing.

>> And if it's such a done deal, why didn't FCC just dump Element 1
>> back in July?
>
> As you well know, the FCC has rules and regulations to follow, Jim.
>Because of that, they can't "just dump" anything.

That's not what Phil Kane says. A complete NPRM cycle is not required for every rules change. Particularly when the change is characterized as "removing a burden"

It's also what both the NCI and NCVEC petitions say. Both of them contend that FCC has the authority to just remove Element 1 immediately, and ask FCC to do so. Are they mistaken?

>Something will happen sooner or later. Give it time.

Something always happens, given enough time.

>An excellent idea. I for one would be very interested in seeing the
>logic and rationale that folks have for keeping or retiring the code
>test. By removing the emotion, personal opinion and bias from the
>discussion, some quite interesting points may well be raised.

Unfortunately, it is pretty much impossible to remove personal opinion from the
discussion. That's because every reason for keeping or removing the test
ultimately comes down to an opinion question.

For example, take the "Morse is needed for emergencies" reason.

On the one hand, Morse is not used very much in emergency communication. On the
other hand, it *is* still used occasionally, by hams, in emergency
communications. More important, there *are* times when it when it is the only
available mode that would get through in the situation.
(Note that phrase "only available mode")

All of the above are documented facts.

The problem is, does the occasional use of Morse in emergencies mean that *all*
hams *must* be tested on the mode? Some say yes, some say no, some say it's a
piece of the reason. All based on personal opinion, nothing more.

Boil down any of the arguments on either side, and what you wind up with is
personal opinion.

Are you saying I should simply shut up and go away? That's not like you at all, Bill.

Carl claimed he had "taken the high ground". And for the most part of that post, he did. But he did let a few derogatory phrases slip in.

Hans, K0HB also took note of them, and Hans is definitely not a 'PCTA grasping at straws'.

> hell of a digital modes engineer.)

That's quite a story, Carl, since the company was founded in 1935 by Ralph Allison. That would put Ralph up in his 90's somewhere. Well, it's good to know he's still in engineering and keeping up with the latest trends. Give him best regards from everyone at ADC. We were under the mistaken impression that he had passed on.

Amateur Radio Newsline™ Report 1365 – October 10 2003

Amateur Radio Newsline report number 1365 with a release date of Friday, October 10th 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Deciding the future of ham radio was not an easy task in Geneva and the problem of Broadband over Powelines continues to grow world-wide. Find out the details on Amateur Radio Newsline report number 1365 coming your way right now.

(Billboard Cart Here)

IARU: HOW RADIO REVISIONS CAME TO PASS

The word is out. Some of those who attended last springs World Radiocommunications Conference in Geneva Switzerland are now saying it was not all that easy to reach decisions. Q-News Graham Kemp, VK4BB, has the rest of the story:

--

Just now some of the background work done at WRC-03 is coming to light. The work was intensive. The main conference hall had over 1500 seats, simultaneous translation in 7 languages often more than 10 meetings going on at the same time, distributed in three adjacent buildings.

Some meetings went on till the wee hours of the morning and resumed at the usual time the next morning!

The growing number of completely new radio services clamouring for spectrum allocation, such as for example space borne radars for terrestrial observation, high altitude platforms together with the ever increasing number of new ITU Member States with active participation made the deliberations that much more difficult.

For Q-News Australia, I’m Graham Kemp. VK4BB, reporting for the Amateur Radio Newsline.

--

It was the decisions made at this conference that lead some nations to abandon C-W testing of radio amateurs and also spur the ongoing, world-wide Morse code debate. (Q-News)

RADIO LAW: BPL BECOMMING A HOT ISSUE WORLD-WIDE

Meantime, down here in Kiwi-Land as well as around the world, the debate is heating up over Broadband Over Powerline or BPL as its called in North America. This is the technology that claims to provide broadband high-speed Internet services using domestic power lines for system wide transmission and Internet connectivity.

For those not aware, BPL works by injecting the data signal into the powerline near the electricic substation and it travels along the line to the user. In some proposed systems, it interconnects cities using existing long distance power distribution grids.

The problem, of course, is that powerlines are not radio frequency cables. They are not shielded and leak RF energy causing a level of wideband noise in the vicinity of the cable. And as tests conducted by the ARRL have graphically proven, powerlines radiate for long distances.

AC powerlines are a very noisy transmission medium, with spikes and other noise. To make it work, BPL operators have to use higher injection powers to get their data signals to propagate along the cable. Higher injection power mean higher emissions, and this is bad news for all High Frequency radio operators.

By way of example, current proposals in Europe would raise the level of the background noise level on H-F by some 60-70 dB within 3 meters of the cable. Further away, the rise would be less, but still considerable.

Because of this, Broadband Over Powerlines poses a threat not only to amateur radio. Users of many low power devices such as security systems that tag products in shops are very concerned. And High Frequency broadcasters world-wide are fighting to support sensible emission limits for powerline breoadband communications.

But that’s not where it ends. In many places security services are worried. Unfortunately, in some countries, government departments involved in security have been told to not object to BPL as the government policy is to support it.

Civil Aviation communication and aero-navigation can be threatened by BPL. There are reports of an air accident in Canada being directly attributable to interference from broadband cable systems.

And this is only the beginning. New plans for BPL will attempt to use much higher frequencies which could immediately pose a threat to some nations emergency service communications. This is an extremely serious issue for amateur radio world-wide and for other users of the High Frequency spectrum as well. (NZART)

**

RADIO AIDS: NOAA PROPAGATION SERVICE TO GO QRT

Amateurs around the globe may soon loose the propagation information system operated by the United States National Oceanic and Atmospheric Administration. This includes real time data on the state of the interaction of the earth's

magnetosphere with the solar wind and state of the earth's magnetic field.

These tools have been invaluable to ham radio operators world-wide for many years. The reasons it may be going away? Budgetary cutbacks and lack of future funding. (Published news reports)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Xerox Amateur Radio Clubs WD6CZH repeater serving Los Angeles from El Segundo California.

(5 sec pause here)

**

ENFORCENMENT: HAM REPEATERS ARE NOT FOR BUSINESS

Back in the United States, the FCC has written to a Lakewood New Jersey to ask him why a repeater bearing his his call sign is being used as an adjunct to a business band radio system. The FCC’s Daryl Duckworth, NN0W explains:

--

Duckworth: “Martin Gross, N2DCG, of Lakewod New Jersey, has 20 days to reply to an inquirey about a repeater on 448.825/443.825 MHz and is used as an adjunct to WNVF 627, a business radio system for the Hatzolah Emergency Medical Services, rather than for Amateur Radio purposes as set forth in Section 97.1 of the Commission’s rules.”

--

In a September 11th letter, the FCC notes that Gross’s repeater is not coordinated. (FCC)

**

AT THE FCC: THE FCC's MASTER SEARCH ENGINE

The CGC Communicator reports that there is an obscure but very important search engine at the FCC website. One that allows you to comb through most of the Commission's licensing systems for specific information.

According to CGC, member databases include Universal Licensing System, Experimental, Cable Operations, Mass Media and International Bureau. Queries can be set up by frequency range, state, county, location call sign and licensee name. More information is in the cyperspace address found at http://gullfoss2.fcc.gov/reports/index.cfm or the backup site at http://svartifoss2.fcc.gov/reports/index.cfm (CGC)

**

RADIO LAW: CABLE TOLD TO SOLVE ITS OWN PROBLEMS

FCC Chairman Michael Powell has told the cable industry that it needs to work out its own problems before appealing to regulators for remedies. At a recent appearance at the annual cable sector conference Powell highlighted issues that have driven a wedge between cable companies and local broadcasters. Specifically, the rules that dictate what over the air channels cable outlets must carry on their systems.

Currently, cable companies are required by law to carry local broadcast channels. But broadcasters are also hoping regulators will eventually force cable companies to carry both digital and analog signals during the broadcasters' transition period to all digital transmission. But cable companies argue that if they were forced to carry both a broadcaster's regular analog signal and digital signals, it would significantly deplete their capacity to air other channels. (Published reports)

**

RESCUE RADIO: ORGANIZING 60 METERS IN VA

Bringing emergency communications to 60 meters is the theme of a new net organized by Virginia RACES, Inc. This, by providing a twice monthly opportunity for equipment tests in the new spectrum asllocation.

The Mid-Atlantic Emergency Net began opeeration on October 1st. It now takes place the first and third Wednesdays of every month at 2000 hours Eastern Time on 5330.5 using upper sideband.

All ARES, RACES and other emergency communications organizations within reliable communication range of the net are encouraged to participate. Liaisons are also invited with similar groups in neighboring states. (Via e-mail)

**

GETTING YOUR E-MAIL: AOL BLOCKS QRZ.COM

If you use America Online as an internet service provider and are waiting for e-mail or a password from QRZ.com, this is for you. A-O-L has decided to unilaterally block delivery QRZ.com e-mails unless a specific A-O-L user goes to the trouble of unblocking his or her own account.

According to QRZ, they have been getting up to 50 emails a week from America Online users who have not received their QRZ passwords or Links. QRZ advises that it is A-O-L and not them that has placed spam filters on incoming e-mail. To fix the problem, users must log onto A-O-L, go to “SPAM CONTROL” and set it so that e-mail from QRZ.com as an allowable e-mail address.

QRZ adds that it has no other way of sending America Online users a password or log on information as A-O-L has QRZ e-mail filtered out. (qrz.com)

**

HAMVENTION 2004: YOUR IDEAS ARE SOLICITED

Turning to the convention scene, the planners of Hamvention 2004 are putting out a call to the world-wide ham radio community. They say give us your input

and we will listen.

According to the Hamvention website, those in charge of next years gathering have implemented what they call a new "open door policy.” In other words, they want to hear your suggestions or comments on how to improve their show. They also promise to consider your ideas, discuss them, and implement them if possible.

If you want to help make Hamvention even bigger and better, now’s your chance. Sit down at your keyboard and write the 2004 Hamvention team directly at w-mail to info@hamvention.org. And yes, they promise a personal response to every e-note that’s received. (Hamvention)

**

CONVENTIONS AND HAMFESTS: DENVER COLORADO IN OCTOBER

Still with hamfets and conventions, the Rocky Mountain Radio League welcomes everyone to the 2003 R-M-R-L Hamfest slated for October 18th at the Jefferson County Fairgrounds in Golden Colorado. For more information e-mail Ron Rose to N0MQJ@rose3.com. (Press release)

**

CONVENTIONS AND HAMFESTS: SOCORRO N.M. ON OCT 25

Also, mark down Saturday October 25th for New Mexico’s Socorro Hamfest. Socorro is about 80 miles South of Albuquerque. This year the venue is the Firefighters Training Academy with R-V parking available. For information by e-mail please write to ac5bx@arrl.net. (e-mail)

**

WITH THE SCOUTS: A SPECIAL ON JOTA

Last reporter Mark Abramovich, NT3V, told you that the 46th annual Boy Scouts of America Jamboree on the Air will take place on October 18th and 19th. Now Mark has prepared a special report that details the Jamboree on the Air and the very unique relationship between scouting and ham radio.

--
AUDIO HERE
--

Mark’s report is our September Newsline Extra. It can be downloaded as an M P 3 file from our website at www.arnewsline.org/quincy. Just scroll down to the bottom of the page, click on ARNewsline Extra, turn your speakers up and enjoy. (ARNewsline(tm))

**

PROMOTING HAM RADIO: JOTA VIDEO NEEDED

Are if you are planning to take part in this years scouting Jamboree on the Air and own a good quality home video camera, your help is needed. As you know,

Dave Bell W6AQ, Alan Kaul W6RCL and Bill Pasternak, WA6ITF, are always looking for good video of ham radio happenings that they might be able to incorporate into a presentation about the hobby. As scouting and ham radio enjoy a very unique relationship, this is an event that is sure to make it into one of their shows, but only if they have the pictures and sound.

Since the Jamboree on the Air happens only once a year, that's where you come in. What's needed are volunteer camera people to take their gear to where the scouts are holding their JOTA gatherings and videotape them in action. Pictures and sound of them setting up their JOTA campsites, ham stations and their on-the-air operations. Also wanted is video of licensed scout hams introducing non-ham scouts to our very special new world of Amateur Radio.

If you can help in this project, or want more information, e-mail the production team to hamvideo@juno.com. (The Producers)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

CHANGING OF THE GUARD: DANNY WEIL, EX-VP2VP - S.K.

The changing of the guard in ham radio continues. This with word from the San Antonio Radio Club that Danny Weil, the former VP2VP, has passed away October 3rd at age 86.

Weil is best known for his post World War 2 DX operations. During the 1950's and 1960's Weil took to the ham radio airwaves from numerous exotic locations that he sailed to in a boat named the YASME.

Born in the UK in 1918, Weil had been living in a managed care facility in Texas since suffering a stroke in 2001. But during his lifetime his voyages lead to the setting up ham radio stations on remote islands around the world and contacts with over 100,000 amateur radio enthusiasts. His exploits are credited with giving birth to the terms D-X'er and D-Xpedition.

Weil's adventures and those of the Colvin's -- Lloyd W6KG-and Iris W6QL -- lead to the formation of the famed YASME Foundation that assists DX operations world wide. Services for Weil were held in San Antonio Texas on Wednesday, October 8th.

More about the life and death of Danny Weil is on-liner at http://obit.porterloring.com/obit_display.cgi?id=82269&clientid=porterloring (San Antonio Radio Club, Paul Guido)

**

RADIO TRAGEDY: HAM KILLED TRYING TO ACTIVATE DX STATION

A ham radio operator has died while trying to put a rare location on the air. RSGB News Reader Jeramy Boot, G4NJH, has the tragic details:

--

We are sad to have to report the death of Richard Baker, M3RWB, who died as the result of injuries sustained while climbing Aran Fawddwy in North Wales. He was intending to activate the summit for the Summits on the Air, or SOTA, award programme.

The Summits on the Air management team has released a statement which says, "Richard was an experienced hillwalker who saw SOTA as a good opportunity to re-ascend many summits that he had climbed in the past. His death is an untimely reminder that while accidents can happen anywhere, the mountains can present special dangers to those who are experienced as well as those new to mountain travel."

Jeramy Boot, G4NJH

--

The Summits on the Air management team went on to stress that in all cases, the safety of those travelling must come above the desire to ascend to the mountain. (GB2RSO)

**

RADIO RECORDS: US TO CZECH REPUBLIC ON 24 GHZ

Shooting for the moon has provided two hams the first-ever United States to Czech Republic E-M-E contact on 24-Ghz. The ARRL Letter reports that Amateur Radio moonbounce and microwave history was made September 24 at 1400 U-T-C when Josef Sveceny, OK1UWA, and Al Ward, W5LUA, completed the 24-GHz EME QSO between the two nations.

Sveceny used a 3-meter Prime Focus dish with 35 watts at the feed, vertically polarized. Ward’s station also utilized a 3-meter Prime Focus dish with but with 70 Watts at the feed. Ward was horizontally polarized to account for the spatial offset between North America and Europe. Previous international 24 GHz EME QSO’s have taken place between the US and Canada, the US and Russia and Canada and Russia. (ARRL)

**

INTERNATIONAL - INDIA: ECHOLINK COMES TO VU

News out of India is that a new EchoLink VHF Repeater has been installed at the Indian National Institute of Amateur Radio. The new system allows local hams in Hyderabad to contact Amateur stations all over the world twenty-four hours a day. According to Jose Jacob, VU2JOS of the National Institute of Amateur Radio, this is the second such repeater to go into service in India. (GB2RS)

**

INTERNATIONAL - UK: RAYNET AT 50

The Radio Society of Great Britain is hosting RAYNET’s 50th Annniversary Emergency Communications Convention in Birmingham, England on Saturday the 25th of October. RAYNET is the U-K equivlant to our RACES an d ARES combined. Paul Gaskell, G4MWO, tells Newsline that in addition to the convention, a special event station will be taking to the airwaves as GB50RAEN. It will be on the air from October 20th till the 31st. QSL’s go via RSGB Bureau. Further information is in cyberspace at www.rsgb.org/emergency (GB2RS)

**

ON THE AIR

On the air, HE2GR is a special event call for the USKA club station HB9GR. It’s on the air to celebrate the 200th anniversary of the Swiss Cantons of St Gallen and Graubuenden. HE2GR will be active on CW, SSB and digital modes until the 30th of December. QSL as directed on the air. (VHF Reflector)

**

DX

In DX, ZL3CW will be active as ZM8CW from Raoul Island in the Kermadecs through the 18th of October. Jack says that he will be there doing maintenance work for the Department of Conservation and hopes to be active in his spare time. This is actually not a DXpedition, but ZL3CW is considered to be one of the better Morse operators and enjoys the challenge of the pile-ups. (Modern DX’er)

And a D-Xpadition to Annobon Island was forced to shut down prematurely. This after authorities ordered operations curtailed on October 4th local time. According to the various D-X remailers, no reason was given for ordering the 3CZ0V ham radio operation off the air. (Via Internet)

**

THAT FINAL ITEM: HAM RADIO AT THE NYC MARATHON

For this weeks final story we turn the ham radio sports page and one of the biggest events of the year thats about to take place. And its Amateur Radio that makes it happen. We have the details in this report:

--

If you want to see a shining example of how valuable amateur radio can be as a public service, look no further than New York City the first week in November. Providing communications for the marathon is no small job. Just ask Communications Director Steve Mendelsohn, W2ML. When the marathon was run back in 1976, 26 hams provided communications assistance. This year, 425 hams will help, and they'll do it using 9 repeaters on 2 meters and 440. Mendelson says it's a source of pride for the ham volunteers who come from across the country:
--
Mendelsohn: “Just like Disney's fantasy land, once you hav e been there you want to come back over, over and over again.”
--

The marathon isn't just for New York area hams. Mendelsohn says amateur radio operators show up from more than half a dozen states to help:

--
Mendelsohn: “We have people coming back from Colorado, coming back from Vermont, from florida. They come in from all over. Seven states, twenty-six miles, no waiting.”
--

New York's boroughs will be flooded with over 30-thousand runners this year. The hams helping will be part of more than 9-thousand people volunteering. How you manage that many people could be a massive challenge -- but Mendelsohn says race organizers figured out how to do it:

--
Mendelsohn: “You break the nets up into sizable chunks. You name a Mile Captain for each of the miles, and the Mile Captain manages a staff of anywhere from 3 to 15 people. Oncve you get further along in the race where there is more of a chance of the runners falling and dropping out because thery are tired, you increase your manpower.”
--

18 net controllers with 2 standby operators will be on duty. Communications start at 3 a.m. race day and go until 6 o'clock that evening. 35 hams will be on hand at the starting line alone. Once the race is done, Mendelsohn says the hams' work doesn't end. For this many runners and their family members to reunite takes up an area of more than five blocks.

Hams help there, too. And they'll tag along not just with race organizers, but with translators who will need amateur radio operators by their side, too. It's a huge undertaking that takes a lot of planning and makes for a very long day. But the hams helping out with New York City's marathon wouldn't trade it, because Mendelsohn says, it's just plain fun.

From Birmingham Alabama, I’m David Black, KB4KCH, for the Amateur Radio Newsline.

--

For those of you in North America who might want to grab a glimpse of ham radio in action, NBC Sports will broadcast a one hour New York City Marathon highlights show nationwide beginning at 2:00 p.m. EST on November 2nd. Check your local listings for details.

Also, the full interview with Steve Mendelsohn, W2ML, can be heard on this weeks RAIN Report. Its as close as your telephone at 847-827-7246 or on-line at www.rainreport.com. You can find more information on the race in cyberspace at www.ingnycmarathon.org. (ARNewsline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and

Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Jim Meachen, ZL2BHF, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2003. All rights reserved.

When was the survey done? If it is more than two years old, it
is almost useless as there has been significant change
over the last few years.

> The comments to 98-143 were categorized by an NCI staffer (disproving any
> possible claim of bias by procodetest evaluation of the comments) and the
> resutls showed that the *majority* of commenters not only wanted continued
code
> testing, but wanted at least 2 code test speeds. This was true despite an
email
> campaign by NCI to get as many comments in support of their position of 5
wpm
> and sunset clause.

Now it also must be pointed out that for the initial several weeks
during 98-143 comment phase, those commenting were not
aware of the position being put forth by NCI. How many people
at the time may who said they support ARRLs stance
may have supported NCI's position will never be known. Even
so, the issue is NOT to be decided by any "vote" or majority opinion
of any group or even the public at large. The decision will be,
as it should be, based on what should be proper regulatory
setting of licensing requirments.

> Of course things may have changed since then. But for someone to claim,
without

>
> Irrelevant.

Good, since I believe it was you that mentioned that fact
in the first place. If it is irrelevent, why bring it up?

> > Why do you say things about the "young hams" that you know not
> > of?
>
> The evidence of the survey is clear. You can "stick head and eyes in the
sand"
> but it is still there.

Again, what is the date of that survey?

Cheers,
Bill K2UNK

But in these last 7 years, the ham community probably lost
10% to SK status. Most of those were probbaly
pro-code and it is likely the survey, if done today,
would show the continuing shift away from support
of code testing.

> >believe you recenty posted the results of a survey done by some club that
> >shows the majority surveyed supported code testing.
>
> Not "some club". ARRL hired READEX (a professional survey organization) to
> conduct the survey in preparation for WRC 1997.

Asabove, too much time has passed for ayone to consider
those results to be accurate in relation to the current ham
population.

> >I don't doubt those

>
> That sort of behavior is unacceptable. Not "real ham" behavior.

Unfortuneately, it is real ham behavior. Hopefully
it is just an aberration of some hams...although we have
seen such attitudes voiced in the newsgroups by
more than one or two posters in the past.

> >Because of that, few who oppose code testing, and even fewer Technicians,

I agree...surveys, votes, etc hold little sway with the FCC anyway.

> >> > As you well know, NCI is only a tiny part of the overall

A mojority is nice, but as we've already seen, not really
needed when the decision to keep code testing can't be justified
to begin with (ref: R&O of 98-143)

> >Are you campaigning for members
> >or something?
>
> Just the opposite ;-)

Keep doing your "just the opposite" because it helps
let others know we exist.

> >There is no requirement whatsoever that says those who oppose

every
> rules change. Particularly when the change is characterized as "removing a
> burden"

True, but the FCC isn't stupid either. A few months of process
helps avoid complaints down the road.

> It's also what both the NCI and NCVEC petitions say. Both of them contend
that
> FCC has the authority to just remove Element 1 immediately, and ask FCC to
do
> so. Are they mistaken?

No, I don't think they are mistaken, I just think the FCC is
doing the process path because it is, in the end, less
controversial...(IMHO).

> >Something will happen sooner or later. Give it time.

Jim:

Indeed. And more often than not, it's usually good, 'ole fashion Morse/CW which is getting through.

Jim:

The truth is, only hams who know the Morse code have the capability to fall back on the CW mode when other modes are unavailable. Why do hams know the Morse code? Because they had to learn it to pass the code tests to become licensed or obtain upgrades. In the absence of a code testing requirement, why will they learn it? How will we convince new hams to invest the time and effort to learn this useful communications skill when they are not offered the incentive of increased operating privileges? I'm asking you because I don't have the answers. I'm one of those hams who learned the code because I wanted to be a ham, and the requirement was there. Ony *after* learning the code and becoming a reasonably proficient CW operator did I become aware of it's benefits and advantages. Personally, I'm grateful that the code testing requirement existed when I became a ham. Had it not, I never would have become a CW operator...and neither will most hams in the ECTA (Era of Code Test Abolition).

writes:

>Therein lies the problem with the whole CW test (TEST, *test*) debate. The
>minute one takes on the "no" CW test argument, it is generally met with an
>attitude that an end CW use (USE, *use*) is being favored or called for.

Kim:

Code testing has always been the thing which generated code use.
In the absence of a code testing requirement, there will be progressively
fewer hams who have never been exposed to learning the code as a
result of the requirement. Since the requirement was the principle
motivation to learn the code, code use *will* decline once code testing
is abolished. Therefore, testing and use are two closely interrelated
concepts.

>Until, (UNTIL, *until*) it is clearly understood that seeking the end of the
>CW test is not the equivalent of seeking the end of CW as a mode, this
>debate will never fall within the realm of "friendly" debate at all. I
>think it's even hazardous to use the PCTA/NCTA labels.

PCTA = Pro-Code Testing Agenda; NCTA = Anti-Code Testing Agenda.

Unfortunately true. And, IMHO, they will not. I already consider code test abolition to be a done deal. What matters now is what happens next.

>A majority of those who commented to FCC on 98-143 wanted *at least* two code
>test speeds. But FCC went to 5 wpm for all classes of license and set the
>stage for complete code test elimination.

Indeed they did. All they're doing now with the current petitions is just going through the motions so nobody can accuse them of not following their own procedures before the pull they plug on code testing.

>>This could provide excellent support to replies

>
>73 de Jim, N2EY

I'll take a look-see. Quite frankly, my response to the latest petitions will probably just be the "I agree with the FISTS petition" variety. I can't think of anything new to add, and I believe the FCC already has it's mind made up. Moreover, I'm not sure that a meaningless 5 WPM code testing requirement is worth saving. If there were a chance of keeping 5 for General and bumping back up to 12 for Extra, I'd be willing to fight for it, but that's simply not going to happen. Like all good liberal socialists, the NCTA doesn't want to compromise...they want the world handed over to them on a silver platter. I've never seen an encouraging level of passion on the part of the PCTA, and again using a political metaphor, they, like the Republicans, can't seem to get their act together. Even the FISTS petition is too little, too late. Nancy Kott gave us a good start at the '97 Dayton Hamvention, then ran out of gas. The ARRL's support for code testing has been half-hearted at best. If a couple hundred thousand ARRL members had told the League that they'd cancel their individual memberships and club affiliations if code testing were reduced in any way, we probably wouldn't be looking at a future ARS without code testing. We will now have to live with the consequences.

>
>I don't recall Mike appointing your the judge and arbiter ...

Carl:

In that case, consider my services to have been donated out of my own
generosity.

>"Morse Myths" is, as you well know by now, simply a term
>that refers to all of the patently false, old wives' tales, such as
>"Morse gets through when nothing else will.",

This one is true…

>"Morse is essential
>for emergency communications.",

Who said that? Provide correctly attributed quote.

>"Morse acts as a 'lid filter' to
>keep us from being overrun by the "mongul hordes' of CBers
>who are lurking in the wings waiting to take over the ham bands."
>etc.

I've never said that whatsoever -- in fact, on many occasions, I've gone
out of my way to note that a lot of the problems on HF phone are being
caused by 20-WPM code tested Extras.

>I reject your claim that the term "Morse Myths" is derogatory and
>inflamatory.

Reject all you want, Carl, but the fact remains that it is. You have taken
the low road, while claiming the opposite.

>It is simply a term that refers in "shorthand" form to
>a panoply of falacies that are often cited as "reasons why we MUST

>keep Morse testing" ... none of which hold water and all of which
>have been rejected by the FCC.

I have always presented well-reasoned, factual, and unemotional
arguments in support of code testing. Please don't hold me up to
the same light as those who may have transgressed in the manner
which you refer to above. Above all, please remember that by far,
the largest portion of the QRM in the code/no-code debate has been
from the NCTA side. Also remember that as one who has never
used the Morse/CW mode to an extent which would have allowed
you to gain useful proficiency in the mode, you are not qualified to
judge the value of this mode at all. I'm not sitting here trying to
argue technical topics with you, so don't you try to tell me that the
Morse/CW mode and testing aren't of value to the ARS. We are
not on each other's respective levels of expertise. Since I'm
more than willing to respect your technical expertise, don't presume
to challenge my qualifications to make judgments about CW and
code testing, because you don't know what your talking about.

Bill:

None, actually. The truth is that the Morse/CW mode is one of the most practical, efficient, effective, and universal modes of radio communication available to radio amateurs, and well worth the effort to gain and maintain this particular skill. Everything you and Carl mention is nothing more than NCTA sour grapes.

Can you name one? Search the entire population of licensed hams and
I'm sure there's some here and there that would take that stance...BUT,
that is not the position (just in case someone tries to suggest
otherwise) of NCI. We (NCI) oppose code testing. We (NCI) have no
problem with code USE.

> >Until, (UNTIL, *until*) it is clearly understood that seeking the end of

test
> they are against.

Another problem is that some (many?) that favor code testing suggest that
by ending that testing it will lead to an end to code use. I don't
belive that at all and there are hundreds of examples of older
technology and skills that are still practiced today in other
fields even though such technology/skill is recognized as

no longer generally used/needed (e.g. archery, manual transmission
autos, etc.)

Well, Hood Buddy, your rejection is hereby rejected!

It's well known that for the likes of you,*everything* pertaining to Morse code is mythical! Hell, you couldn't take advantage of any of it's attributes if your very life depended on it!

What you refuse to acknowledge is that some of us COULD and WOULD.

You really can't see how truly ignorant that statement is!

If the license holds value only for the priveleges it conveys, and one
refuses to meet the requiements, and therefore is issued NO license,
he has incurred no loss but ham radio, which requires nothing whatever
from any licensee, has! Amazing!

Those who actually DID want the license, and the priveleges it conveys,
concentrated a few weeks effort in our 'discertionary' time, and
surfaced with the privileged license, while the "hoopers" remained

submerged and held their breath.

No wonder ya'all are so blue!

It's easy enough to accept that those of you who have never had any use
for radiotelegraphy would view its stated attributes as mythical, and
for the lot of you that is indeed a proper description. You couldn't
communciate your way out of an emergency using Morse if the fate of the
planet DID depend on it!

But that isn't my question or argument, Bill. It isn't really about the test. I don't care if they make the taking the test punishable by inprisonment.

My question was related to the statements that Pro coders are technically backwards.

I'm alomost confused here Bill! I'm saying there is no direct
relationship between being Pro-Code and technical ability.

Yet, even if one accepts your claim that morse is...one of the most...etc
You have failed to convince the FCC (98-143) and more recently the
international radio community (WRC-03) that whatever traits
morse has it should be retained as a test requirement.

Cheers,
Bill K2UNK

ROTFLMAO...
The sale seems to have been made already to the only
buyer that counts...the FCC and, more recently, the ITU.

Cheers,
Bill K2UNK

I stand a better chance of helping someone else in life as a ham
without knowing any code than waiting for that unlikly
need for CW to actually be used. As for the fate of the planet,
when is the sequal coming out to ID4?

Cheers,
Bill K2UNK

And just to crown their ignorarance of it all, when I found a
dead-band morning where there was group of very weak Europeans coming in
on 20 meter PSK31 that wouldn't print, but their CW ID's were completely
good copy, Carl and his little lid buddy Brain Burke accuse me of "not
being able to make PSK31 work!"
Can you believe the clowns? I had only been working PSK31 for the past
6 or 8 months!

I know, the reason for the failure of PSK31 in that case was likely
polar phase shift, but that seems to be meaningless to our technical
genius and his pals!

"Too many clowns and not enough ringmasters!"

*They're already here!"

And should the time come when CW is caleld for, you and "someone" both suffer the consequences of your lack. Odds are always against it happening. So were the odds against planes being flown into WTC. But it happened. I have perxonally seen the need arise for emergency communications where there were NO communications available and when HF CW could have easily been used, if it had been planned for. I wasn't making the plans.

> As for the fate of the planet,
> when is the sequal coming out to ID4?

Whatever it is, I didn't see the first three and have similar lack of interest in the fourth.

Okay, perhaps it wasn't you. Someone posted the results of a survey done by some club or group in Minnesota, Michigan, or somewhere like that, just a week or so ago and I thought you were talking about that survey. I haven't seen the survey you're talking about here so can't really comment on it.

> That sort of behavior is unacceptable. Not "real ham"
> behavior.

Luckily, it is rare. The club in Washington was very open to all. This club isn't. Sadly, the fact that a club elsewhere is different doesn't really help those who are here. I've considered starting an alternative club, but I'm afraid the strong position of that club will quickly turn anything like that into a pro-testing versus anti-code testing situation (fed by members of both groups) which will not really benefit anybody in the long term.

> How do we know that there are "far more outside that
> organization..involved"?

Well, since most Amateur Radio operators don't join any type of club (local, ARRl, or whatever), it's a fairly safe assumption.

> Most of those opposed to code testing I have encountered
> here *are* members of NCI. (snip)

Do you know that for a fact, or did you just assume they were members like you did with me?

> No "onsession" at all. I'm just curious as to why someone who
> felt strongly or even mildly that code testing should go would
> *not* join that organization. (snip)

Do you feel most who support code testing are members of FISTS or other such clubs? I don't think so. Based on what I've seen, there is a general trend throughout this country not to participate in clubs or other such groups. About the only exception to that is national political groups, which seem to be gaining members.

The aggregate population that will be affected by the interference from BPL is minimal at best. Even if commercial interest is rolled up into the collective, there just ins't going to be the appearance of a majority negative impact on this one.

BPL is a reality.

That sounds to me like a thinly veiled "filtering tool" again; using some
form of exam or entrance requirement to "filter" out types of people that
are designated as undesirable by...you guessed it: *other* types of people.

I am of the ilk that anyone who passes whatever entrance there is into ham
radio (whether it be in written or mode-test form--just whatever entrance
there is into ham radio at the particular time someone is interested) is
welcomed to ham radio. I'd rather have the opportunity to let the majority
environment of ham radio be the positive influence on someone who may
otherwise not be "desirable" and let them warm up to the service, in
general. Closing the door right up front never allows us the opportunity to
be a positive influence; and that is a loss.

Absolutely, Jim! And, as an added commentary to the above, it would be my hope that many in the EmComm interest of ham radio would push CW at every chance they had. When I was in a position of leadership in EmComm, I always pushed CW--and there was not portion of the group that moaned or forsaked it. Everyone recognized its value, and the value that those who use and understand it brought to the table.

I say no. It is no reason for keeping CW as a tested element for licensing. That is my personal opinion.

>
> Boil down any of the arguments on either side, and what you wind up with is
> personal opinion.
>
> 73 de Jim, N2EY
>

Exactly. If I am asked to explain my personal opinion, that is when it gets ugly--although from my perspective it gets ugly from an intial onslaught of insults and uglies from people who differ from my opinion. My return to them is going to be in like manner--but *ONLY* toward the attitude they display. I have no problem at all with anyone's opinion or beliefs on CW. All are quite valid, and I think the trend only reflects majority *opinion,* not display of force or argument from either side.

>
> unk
>

But Wayne was out of Byte by the third issue, at a time when it did not amount to much. He only lost the potential for when it did get big.

He then turned around and started Kilobaud, which was pretty good for some years, and then launching the very successful magazine for the Radio Shack computer, titled something like "TRS-80 Microcomputing", and a number of other computer specific titles. It's those he sold to IDG, which brought in quite a bit of money at the time. Ironically, by the time he did sell them, they were past their peak because the computer world had moved on. I can't remember the year of the sale, but I thought it was just as a lot of computer magazines were folding, because too many had entered the field.

And since your wording can be read two ways, it's worth throwing in that Wayne was divoriced from Virginia Londner Green by the time Byte had started up. They had broken up about 1967 or 68, and from an editorial at the time, it seemed to be the indirect cause of his later tax problems.

By the time Byte was started, he was married to his second wife, Lynn.

It was never clear why Byte was put under the name of is his ex-wife, though years later he did say it had to do with the tax problems and the problems with Bell over those telephone articles, so he put it under someone else's name so it couldn't be grabbed. That still does not explain why it was his ex-wife. Three issues into the magazine, Wayne's name was gone from the masthead. Nothing was said at the time. And it was amusing how childish it got, with no mention of Wayne or 73 for about ten years. Even when there was an article in Byte about teletype machines, and the bibliography mentioned QST, CQ and Ham Radio, 73 was significantly absent.

Anyone, *anyone* who allows theirself (bad English) to get all in a huff
about CW use going away or being legislated out of ham radio is being

foolish. There are a few who have been proponents of seeing the end of CW; and when I see those posts, I yawn and go on. There will never be an end to CW use, and it would never be banned from use in the ham bands...it just wouldn't. I think it would be unrealistic to think it would. And, if it was based off a majority of users of the bands, I rest assured knowing that most would not support an end to CW use. I think those who are in the minority are there mostly for the shock value of it.

heh heh. Yeah, and any ham worth being a ham would have a 6-meter rig that
can go mobile so they can measure/observe (and report) BPL interference.
Right?

Ducking

> concepts.
>

1) To use the test element as a reason to proliferate CW users is not
acceptable to me. The reason is because the test requirement is a
government sponsored requirement. If we use your expectation for the
requirement above, then I respond that the continuance of the mode of CW is
not the responsiblity of the government, nor should it be. The FCC, the
government, has decided that CW is no longer needed for its expectation and
interpretation of what the ARS is about. To argue with that is merely
spinning our wheels at this point--it's a done deal. So, if your basic
support of the CW test as a requirement for ham radio is that it will keep
people learning and using the mode, then I would wholehertedly disagree.

2) Using the statement you make, above: would you not also agree then, that
the choice by some people to stop short of HF privileges, simply because of
a CW test requirement, depletes the overall supply of HF, therefore CW,
users anyway? I'd rather dismiss the test requirement for CW and have HF
thrive and active for the ARS. The influence of good amateur radio
operators who appreciate the value, tradition, and history of CW will always
be a positive effect on the maintenance of the population of CW users.
Again, it is not up the government to be the arm of CW continuance.

The hazard, Larry, is in the derogatory slams that have been bantered back and forth while using those terms. The term "nigger" (excuse me, to anyone who is offended by that word--me included) isn't derogatory until some bigoted person uses it against another person, either. No hazard, at all, in being honest.

And, DICK, what modes would be your failure to communicate your way of an
emergency if the fate of the planet depends on it? I wish, for once, you'd

answer an honest question. I suspect it'll be the usual, though. Complete silence because my question is not only one you can't answer (yeah, I'll make the bet that you are *NOT* proficient in all available modes of ham radio), and it's also one that makes a counter to the point you attempted to illustrate, above.

So, DICK, what mode would be our shortcoming if we were all looking to you to "save the planet?"

There has been at least one posting to one of the amateur newsgroups referencing an article by an independent economic analyst. He has evaluated BPL several times over the last 10 years at the request of various clients and in his opinion it will not really get off the ground regardless of technical feasibility. The investment exceeds the projected return. Other means of delivering Broadband are much more cost effective. Only time will tell though but I hope he is right. Keep in mind that the test sites are only designed to demonstrate technical feasibility not cost effectiveness.

Plenty of "guts" here, Brain, and I have re-read many of Jim's posts
looking for something that equates to "no code = lower standards".

Haven't found it yet.

>I'm always amazed at how you PCTA give each other passes on every
>damned thing.

What "pass", Brain...?!?! Mean like how YOU let LENNIE "pass" with use of
snide remarks, blatant lies, profanity and obvious misdirection of his posts,
but then accuse others of the same thing without comment...?!?!

>Go ahead, ask him.

Why do I need to ask him anything when his comments are archived for all
to read...?!?!

Now...about those T5 logs and your "authorization" to oeprate in Somalia?

I used to enjoy reading 73. Nobody could ever agree 100% with Wayne Green, but I liked to read his editorials.

I suppose all of us that didn't renew are to blame. Certainly the combination of falling ham numbers and hard times haven't helped. Magazine subscriptions have dropped right off the bottom of my list of financial priorities, for instance.

Oh well, I still have my 73 hat. I actually ordered an entirely different free gift, but they ran out of whatever it was. I will miss 73, though.

Well since the number of licensed hams in the US is at or close to an all
time high, I don't think "falling ham numbers" had a thing to do with it.

Of course it's derogatory, no matter who uses the word.

True story.....

In the winter of 2001/02 K0CKB and I were vacationing in the southwest. We had parked our RV in the lovely town of Big Spring, Texas for a couple of days, and I had my truck down at the local "quick lube" place for an oil change. A local fellow also having his truck lubed noticed a "Sailors have more fun" bumper sticker on my truck, and struck up a conversation about his days in the Navy. Like me, he had spent some time in the brown water Navy running PBR's in the Mekong, so a lively conversation ensued. In discussing some of his close calls, he attributed his survival to "his big nigger", who was one of his crewman, apparently a big man who was particularly good with heavy weapons. He had liberated a 50-calibre from a wrecked aircraft and mounted it on the bow of the PBR in place of the lighter 'regulation' mount, and was extremely adept at using the gun. The fellow cited this the single most important reason his craft had survived Now in the context of the conversation it was apparent to everyone present that he held this crewman in VERY high regard. Yet the term was patently as derogatory as if he had called the man a mo----f---er, a c--ks---ker, or any other demeaning name. Two bystanders (not minorities) took the guy to task for his choice of words, and he apologized.

"Falling ham numbers", Alun?

There's almost double the number of licensed Amateurs now was when I got
my first ticket in 72...Where does everyone come up with theses "falling"
numbers from?

>Oh well, I still have my 73 hat. I actually ordered an entirely different
>free gift, but they ran out of whatever it was. I will miss 73, though.

That's not surprising...I subscribed once upon a time and the same thing
happened. Seems he was ALWAYS "out" of something, including his mind.

Ryan, et al, PLEASE coordinate with Ed Hare, w1rfi@arrl.org ... and don't
"write/contact your local commercial radio stations" UNLESS they ACTUALLY
ARE being interfered with AND you are ABSOLUTELY SURE it's BPL.

It is EXTREMELY IMPORTANT that any reports/complaints of "BPL interference"
are REALLY BPL ... the amateur community is being accused by BPL proponents
of "exaggerating the problem (so the ARRL can raise money ... which is
absurd ...
if there weren't a threat they wouldn't HAVE to raise money to defend
against it ...).

We CANNOT AFFORD to miss-identify other sources of interference as "BPL"
or we just lend credence to the BPL folks' claim that we're "crying wolf."

I cannot overemphasize the importance of these points.

Hans, unfortunately, that term is freely used down here. I've heard it from
perfect strangers if I happen to be with the common friend of another and
they just chat for a few minutes, to a close gathering of all friends who
freely express that form of hatred, regardless of how they know I feel about

it. I have dropped three, what I thought was, very good friends in the last two years over this issue. Not only the "term" but the emotion of bigotry *and* racism that goes along with it, is alive and well down here.

I freely express disdain at the emotion of bigotry and racism and have often been chastised for it. Now, among my black friends I am called that name--and, I admit, it still throws me when they use--but I am told over and over again that the use of that word "among them" is an expression of kindred spirit. I still tell them I don't like it. I tell them to call me by the affectionate name one of my girlfriends calls me, "Boo."

I have also met blacks (and people from other ethnic groups) who are bigots and racists and I have just as much disdain for them.

The video on the ARRL website shows a couple of BPL variants ...
one that uses SS and another (test area 4) that uses OFDM.
They sound different.

Again, I cannot over-emphasize the importance of making SURE
that complaints of "BPL interference" are REALLY from BPL and
not some other source.

The LAST thing we need now is a bunch of people "crying wolf."
(Real complaints are one thing, crying wolf will only HURT us.)

>
> Code testing has always been the thing which generated code use.

I would assert that being forced to learn code to gain access to HF
"soured" more people on code use than it encouraged ... of course,
some percentage of folks decided they liked code and continued to
use it, but MANY simply endured something they had no interest in
to get past the test, then "threw away the key."

Remember the old adage "honey is better than vinegar."

> In the absence of a code testing requirement, there will be progressively
> fewer hams who have never been exposed to learning the code as a
> result of the requirement. Since the requirement was the principle

Translation: Larry and his "kindred spirits" are either unwilling to expend
the effort to (or incapable of *politely*) encourage people to "give the
code a try and see if you like it." And, they are apparently unwilling to
take "No thanks, not interested" for an answer. Thus, they continue to
seek to have the FCC mandate an arguably counter-productive "recruiting
program" for them ...

With the ten-year license, many "official" hams are actually SK or totally inactive. Also, while the no-code VHF hams do buy equipment, it's often not the more expensive gear that many of the HF operators buy - in addition to their VHF and UHF gear. I know Larry (the "L" in R&L electronics) supported the no-code change to not only keep customers at his business doors, but also to keep ham manufacturers in business. He noted the drastic reduction of suppliers he now has available. For my two cents worth, the FCC should seek to maintain CW as an effective, efficient, low cost option in amateur radio by offering a CW certification (maybe 15 wpm) to any amateur license. Especially, if they drop the lowly 5 wpm requirement. That certification would allow the use of a 20 KHz , or the present 25 KHz now reserved for Extra Class, at the bottom section the 10/15/20/40/80 meter US band segments. It would not provide any special SSB incentives.

ROTFLMAO some more ...

> Also remember that as one who has never
> used the Morse/CW mode to an extent which would have allowed
> you to gain useful proficiency in the mode, you are not qualified to
> judge the value of this mode at all.

You are totally wrong on this assertion ... I know the code, had
"useful proficiency" (nearly 20 wpm at my peak), but haven't used
it in a long time ... I am certainly qualified to judge the value of the
mode (at least for my purposes, and also in more general terms).

> I'm not sitting here trying to

Larry, I don't demean your "real ham-ness" because you are not
my equal on the technical plane, but you demean the "real ham-ness"
of anyone who is up to your "standards" of Morse prowess ...
I think you're arrogance and narrow-mindedness are showing again.

>73,
>Carl - wk3c

Start crying to the FCC about anything. If your Mower quits, call the FCC and tell them its BPL causing it. Even if BPL is no where near you. If your Tires go flat or LOW on AIR, tell them you saw Arcing from the Power lines to your tires and it was BPL that did it. THE MORE COMPLAINTS THE BETTER.

Not all of the BPL "pilot" deployments are using spectrum as high as 6m,
though they want to ultimately use "2-80 MHz" if they had large commercial
deployments of paying customers.

I hope you are right about that. Some of us are not about to "trust to the
kindness of strangers" however

>And, if it
>was based off a majority of users of the bands, I rest assured knowing that
>most would not support an end to CW use.

Not now, anyway.

>I think those who are in the
>minority are there mostly for the shock value of it.
>
Perhaps.

But not too long ago, the mere suggestion of *any* class of ham license with no
code test would have gathered almost no support. And the idea of the total
abolition of code testing would have been discarded with the claim that
no-one wanted all code testing to end.

They way to outlaw something is little by little. Remember your concerns about
the restrictions on privacy brought about by 'homeland security' responses?
Little by little....

There was a time when AM was king of the 'phone modes. Then SSB came a long and
took center stage, while AM was relegated to niche status. Most folks said
"No-one is against the *use* of AM"....

But that was not good enough for some, and proposals have arisen every so often
to effectively outlaw AM from the ham bands. HF ham bands, anyway. So far, none
of them have been successful.

Up until 20 years ago, the amateur power limit was 1 kW DC input to the stages
delivering power to the antenna. Then the rules changed to 1.5 kW PEP output.
For the AM folks, this was effectively a lowering of the power limit to about
half of what it had been before the change. For SSB folks, it was effectively
about a 50% raise of the power limit.

LIttle by little...

>The truth is, only hams who know the Morse code have the capability
>to fall back on the CW mode when other modes are unavailable.

Absolutely true. But whether that is a reason to make every ham pass a code test is a matter of opinion - some say yes, others say no.

>Why
>do hams know the Morse code? Because they had to learn it to pass
>the code tests to become licensed or obtain upgrades.

That's one reason.

>In the absence
>of a code testing requirement, why will they learn it?

Here are some reasons:

- Morse is fun for many thousands of hams
- Lots of interesting DX on Morse only
- Morse gets through better than any analog voice mode and better than many TOR modes
- Morse equipment for a given performance level costs less and is simpler than any other mode
- Morse is usually aural, not visual, but doesn't require talking. It's a unique way of communicating
- Morse takes up less, or far less, spectrum than almost all other modes.
- There is much less objectionable stuff to deal with in the parts of the bands where Morse is usually used.

>How will we
>convince new hams to invest the time and effort to learn this useful
>communications skill when they are not offered the incentive of
>increased operating privileges?

Through the incentives of:

- improved performance of a given radio setup
- less crowded spectrum space
- a unique communications experience not available elsewhere
- rare DX
- spectrum conservation

There is also the element of putting the mode out there for others to see. As in demonstrations at club meetings, hamfests, conventions, Field Day, etc. "Sell" the mode the way the FM/repeater, PSK-31, APRS, packet and other folks have been selling their modes for years.

If all a new ham ever sees is other, more experienced hams talking into mikes and tapping keyboards, that's all the newbie will think exists.

Look at what the AM and vintage/military radio folks have done. They set up demos at hamfests and other venues to show what it's all about. Why not the same thing with Morse? Show 'em how it's done - plant the seed.

Or consider the QRP/homebrew/hiker folks. What's the most effective mode to bring along on a backpack trip?

Elecraft has a new rig - the KX1. Amazing little box the size of a stack of QSLs. Is there *any* non-CW rig of equivalent size/weight/power requirement that will perform anywhere near as well?

You should see the looks on their faces at FD when they see the CW station making QSOs at a rate better than the 'phone folks, yet using a more modest setup and expending far *less* effort. When well over half the points earned by a 4A+free VHF FD setup come from one fulltime and one part time setup running CW, serious selling is happening.

>I'm asking you because I don't have
>the answers. I'm one of those hams who learned the code because
>I wanted to be a ham, and the requirement was there.

That's you. It's not everybody.

Some will be sold on the mode regardless of whether or not there's a test.

Some will never be sold no matter what you do.

And some will be sold if approached in the right way.

>Ony *after*
>learning the code and becoming a reasonably proficient CW operator
>did I become aware of it's benefits and advantages. Personally, I'm
>grateful that the code testing requirement existed when I became a
>ham. Had it not, I never would have become a CW operator...and
>neither will most hams in the ECTA (Era of Code Test Abolition).

How do we know that for sure? Maybe you would have seen the light after getting frustrated with other modes.

Here's an experience I had recently (post-restructuring):

Relatively new ham got started via the Tech route. Decided he wanted HF and passed the required elements, including code, which was learned from CDs and computer software.

But then he discovered that learning enough code to pass the test was a far different thing from copying and sending live on the air in a real QSO.

Now remember, this ham had already passed all the code tests he'd ever need to pass. He had all bands and modes open to him, and a nice HF station set up. There was absolutely no requirement that he ever do any Morse code operating at all, ever. Nor was there any requirement to spend more time and effort learning to send and copy real-world off-the-air Morse.

But this ham *wanted* to use the mode, based on its merits alone. With a small amount of help and encouragement, he learned the skills of on-air copy, sending, abbreviations, procedure, etc.

I had the privilege and honor of being his first CW QSO. Since then he's had many more, his skills have improved, and he's on the way. CW SS is a few weekends away.....

And this ham is the kind who will share what he has learned with others and repeat the cycle. Test or no test.

--

Sure, not every new or old ham will be "sold". But we don't need every ham. Just enough hams. And a positve image.

Does that answer the question?

Same here - unless there is something which definitely disqualifies a person
from eligibility (like unresolved convictions for violations of the

Communications Act).

>I'd rather have the opportunity to let the majority
>environment of ham radio be the positive influence on someone who may
>otherwise not be "desirable" and let them warm up to the service, in
>general. Closing the door right up front never allows us the opportunity to
>be a positive influence; and that is a loss.

You miss the point, Kim.

The whole long dragged out argument is about what those entry requirements should be. Robert wants an entry level test that an "average honor roll high school student" could pass. Right away, one has to ask - why an honor roll student? And what about a middle schooler?

My point about the 6 year old General and the 8 year old Extra is that even the pre-restructuing exams were such that children much younger than high school could pass them.

And I am on record that there should not be a minimum age requirement for any class of amateur license.

There is also the idea that rather than "closing the door right up front" (good turn of phrase, btw) that what is being attempted is to have the learning and testing process be a positive influence.
>
>> If Beavis did get a license, then ham
>> radio would
>> sound like the old 147.435 machine on L.A..... W6NUT IIRC

>Even Beavis and Butthead have the potential to be a great couple of guys.
>Everyone has potential.

Of course - but what matters is what is demonstrated.

And how are the license test requirements decided?

Put aside the code test brouhahah for a moment, and let's look at the writtens.

At one extreme, the writtens could be derived from an enormous pool of questions covering every aspect of amateur radio in such detail that they'd require a photographic mempory and/or a thorough understanding of the rules, theory and operating practice to pass.

At the other extreme, the writtens could consist of a few extremely basic questions such as "Where are the rules of the ARS to be found?" and "Who is required to follow those rules?" and "Do you solemnly swear/affirm/cross-your-heart-and-hope-to-die-promise to follow the rules of the ARS?" with everything else left up to the licensee and the amateur radio community.

Most folks will now say "Oh no, I mean something between those two extremes!" And that "middle ground" all comes down to somebody's opinion, nothing more.

There is an ITU-R Recommendation that deals with the sorts of
THEORETICAL knowledge that hams should possess ... IIRC,
it's ITU-R Recommendation M.1544 ...

That recommendation is consistent with the basis and purpose
of the ARS, both as defined by the FCC and the ITU.

While not strictly mandatory, it is provided as "good advice to
administrations" on what sorts of theoretical knowledge hams
should possess.

> I didn't say it wasn't, Len. Instead, I simply said that this (commercial
>communications today) might be one reason the Technician license would have
>at least some appeal to you.

Tsk, tsk...you now appear to be wanting to control who gets to ask
what in addition to wanting specific-category answers.

I reminded you that commercial communications was ALREADY into
VHF and higher a half century ago. That's fact. You can find it in
the electronic industry's own archives, particularly in old electronics
trade publications. I saw it first-hand a half century ago, beginning IN
radio communications then.

A bit later I wrote that amateur licenses did not have that much
personal appeal for me. Neither does the "social aspect" or ego
need stroking by group belonging. You should have surmised that I
have a fairly extensive exposure to communications arts and technology
by now, little of it based solely on news and "theory articles" in amateur
radio publications.

While that is true, you are starting to misdirect and getting a bit hostile
with an obviously unfriendly "challenge." :-)

Feel free to tell everyone WHY one MUST have "at least" an amateur
radio no-code-test class license in order to discuss the retention or
elimination of a code test for any radio operator license.

Recall that this is a public forum, unmoderated, accessible to anyone.

There is no dispensation for licensed amateurs to exclude
professionals from discussion of radio matters.

This newsgroup is NOT a private forum...although it has become a
chat room gathering place for regulars...most of whom insist that all
must think, believe, and absolutely honor their superior thoughts,
opinions, viewpoints, and beliefs.

>> (snip) Hey, you don't like some of my comments on the
>> code test. So, what else is new? Do you need instant

>test. I've taken no position whatsoever on your comments. I'm opposed to the
>code test, but that doesn't mean I specifically endorse anything you've said
>on the subject.

To reiterate, this newsgroup is a PUBLIC forum. Anyone posting anything
in public is open for any kind of reply. That's just the way it is.

My comments are more general rather than to specific individuals.

Many others are vehemently opposed to "different" comments (different
from their own cherished beliefs). Their vehemence takes many forms
as you've seen. Some of the forms are "gentle vehemence" such as
the artificial "necessity" to be licensed in a radio service in order to
discuss, debate, or argue federal regulations on specific radio services.

Why must licensing (of any class) come first?

> My, you are reading a lot into what I've said, and getting it all wrong in
>the process. Absolutely nothing I said had anything whatsoever to do with
>whether I liked or disliked anything you've said. Take the chip off your
>shoulder, and re-read what I said, and I think you'll agree with that.

I will advise you again...try READING what I wrote and recall the
reminder that public postings are open to public comment.

I bring up certain points, facts, history as part of the debate-discussion-
argument on subjects. If those proven and provable items are against
an individual's belief systems, then TS on them. I'm not going to cave
in to anyone's personal insults any time, anywhere...and there have
been an enormous number of such directed at those who are not of
the conservative, old-time beliefs of amateur radio.

> By the way, if you reply, do try to keep it short - I don't have time to
>respond to a long-winded rant (my only real comment about what you've said).

Another reminder: This is a public forum with public access.
EVERYONE takes their chances on posting anything here.

In case you are wondering, I don't have time for long-winded rants of
others.
Others DO a number of long-winded rants in here. Some go into great
lengths to make such rants extremely offensive to another's person.

If you desire to control anything in here, I will suggest you go after the
OTHER "ranters," the obvious insult-mongers and trollers. Let them
learn to take it. I don't have time for verbal fire-fights with those who
are outraged with righteous anger or of those irritated that others do not
accept their own noble thoughts.

LHA

PS: This evolved, convoluted thread started out with non-hostile mention of using a one-tube modulated oscillator in the AM BC band some 55 years ago. Those were known as "wireless phonograph adapters" or equivalent back then, intended to couple a stand-alone phonograph to any AM BC receiver not having a phonograph jack for auxilliary audio input.. Lots of unlicensed in any radio service people had them then for listening to phonograph recordings without buying bigger, more expensive radios. Point of fact. I got my information on that particular little project from an issue of Popular Science, way back when they had construction articles on many hobby subjects.
In mentioning that to folks who had never been born yet then, it seems to be a source of irritation to them and they tended to get hostile in replies. Was no "Part 15" in the loose-leaf FCC regulations then and there was no hue and cry of damnation on such evil "boot-legging" of the airwaves from wireless phonograph adapters 55 years ago. TS for the license-demanders of today. Their problem not mine.

859. Re: 73 Magazine Says "73 and QRT"

My gut feeling is that a lot of mags have or will drop. Yes, there will (likely) always be antenna construction articles, articles on safety, DXing, and a (very) limited amount of homebrewing. Do you remember the construction articles of the 50s and 60s? Back then, there were a lot of home brew projects. Even Heathkit threw in the towel a couple of decades ago. How much did anyone learn dropping in an integrated circuit that contained the whole if amplifier? That plus postal rates going threw the roof hasn't made it any easier for magazines. I've dropped all magazine subscriptions except tv guide (sign of the times LOL). Even when I assembled my first computer (a Heathkit H-8, which I still have), there were modifications to be performed. I had to chuckle when Kilobaud had an article on increasing the transfer rate from the tape deck to/from the computer from 1200 baud to 2400 baud. I was already running 4800 baud (and could get it to sync, but not transfer, at 9600 baud. I think the cheap cassette deck had something to do with it.).

Those days are long gone; today we have satellite tv and BPL (hopefully, not for long on the BPL!!!).

>
> Agreed! Point is, however, that the "no one" statement is simply not
correct.
> >

Let's recall that you are far more into definition than I am, Jim. When I say "no one" it may not mean *everyone* but it means enough to be counted as no one. I believe that the number of folks who wish to see an end to CW in the bands of the ARS are so miniscule that the projection of that ever being a reality is moot.

> >
> >Anyone, *anyone* who allows theirself (bad English) to get all in a huff
> >about CW use going away or being legislated out of ham radio is being
> >foolish.
>
> Not necessarily. Not after seeing the mode (not just the test) attacked
the way
> I have.
>

I've seen it attacked also. But I've never for a moment given it any kind of merit--the mode simply would never be banned from the ARS. Has any mode ever been banned? Sure, rules have changed; rules pertaining to power limits, rules pertaining to test requirements, rules pertaining even (I believe) to *where* in the bands that different modes are allowed or not. But I doubt a mode would ever be banned, once implemented and in place.

> >
> >There are a few who have been proponents of seeing the end of CW;
> >and when I see those posts, I yawn and go on.
>
> That's *you* - not everyone.
>

I can't imagine anyone giving merit to the thought that a mode would be banned. Maybe I am being unrealistic. Using history as a perspective of measurement; I don't see it ever happening.

> >
> >There will never be an end to
> >CW use, and it would never be banned from use in the ham bands...it just
> >wouldn't. I think it would be unrealistic to think it would.
>

I think I believe it enough that I'll eat my sock (the right foot sock) if it ever happens.

> >
> >And, if it
> >was based off a majority of users of the bands, I rest assured knowing
that
> >most would not support an end to CW use.
>
> Not now, anyway.
>

My term "most" includes those people who now and in the future have any kind of romantic thought about the ARS. And, I think most do. There are the few who would see an end to something they don't like. But, given the desire and will of most ARS folks, CW--nor any mode for that matter--will disappear. Now, if I am wrong about history just let me know and I *may* change my belief.

> >
> >I think those who are in the
> >minority are there mostly for the shock value of it.
> >
> Perhaps.
>

with no
> code test would have gathered almost no support. And the idea of the total
> abolition of code testing would have been discarded with the claim that
> *no-one* wanted all code testing to end.
>

I can see requirements changing, etc. But, I cannot see the FCC ever saying, "OK, no more ______ as a legal mode in the ARS."

>
> They way to outlaw something is little by little. Remember your concerns
about
> the restrictions on privacy brought about by 'homeland security'
responses?

> Little by little....
>

I have never doubted that the government would do as they have done. I daresay they were doing under different guises for many years now. Nothing different there. It's all about expectation. The expectation that the FCC would ever ban a mode is minimal for me.

>
> There was a time when AM was king of the 'phone modes. Then SSB came a long and
> took center stage, while AM was relegated to niche status. Most folks said
> "No-one is against the *use* of AM"....
>

But, did the FCC ever get anywhere close to seeing its use banned? I am not, remember, saying that a mode would become so unpopular or disliked on a scale such that it would be rare to find it openly being used. I am saying, however, that I believe the FCC would never regulate its ban.

>
> But that was not good enough for some, and proposals have arisen every so often
> to effectively outlaw AM from the ham bands. HF ham bands, anyway. So far, none

I do see things changing in the ARS, but not related to the outlawing of a mode.

Carl, I think that is "irrelevant" in this newsgroup. If it hasn't
been officially published by the ARRL, it can't apply at all to
amateur radio! :-)

>That recommendation is consistent with the basis and purpose
>of the ARS, both as defined by the FCC and the ITU.
>
>While not strictly mandatory, it is provided as "good advice to
>administrations" on what sorts of theoretical knowledge hams
>should possess.

Well, there are SEVEN petitions for rulemaking posted by the
FCC for retention of code testing...in addition to the seven posted
for the elimination of code testing.

Those for code test retention are RM-10805 through RM-10811
inclusive. The most glaring of the "stuck-in-the-past emotional
attachment to old ways" is Napurano's RM-10806. A classic,
almost, in the gratuitous glorification of morse beyond reasonable
bounds of the state of the art of radio of 30 years ago. It exceeds
morse glorification of FISTS' RM-10811 document. :-)

Roux' petition of RM-10810 is split on code test necessity, only
extras having code tests.

I've already filed Comments on all 14. The others in here seem
content with just jawing and hollering among themselves... :-)

>judge the value of this mode at all.

Tatoo has his stash up in the bell tower while looking for de blane.

Back here in the Real World (not on Fantasy Island), poor Tatoo
would have to contend with all the long-ago, much more qualified
in many more aspects of Real World communications in all other
radio services have either: Never considered on-off morse in the
first place; dropped on-off morse as a required mode; relegated it
to an optional mode, good only for things like automatic ID.

>I'm not sitting here trying to
>argue technical topics with you, so don't you try to tell me that the
>Morse/CW mode and testing aren't of value to the ARS. We are
>not on each other's respective levels of expertise.

Carl lives in the Real World. So do I. Try visiting it some time.

>Since I'm
>more than willing to respect your technical expertise, don't presume
>to challenge my qualifications to make judgments about CW and
>code testing, because you don't know what your talking about.

Hmmm...the Radio God has spoken! :-)

Hey, Larrah, you should have lent your "qualifications" to the US Army way back when the USAF was part of it. The ACAN (Army Command Administrative Network) was organized to NOT use morse code for long-distance primary communications...a couple years after WW2 was ended.

Now get back up in the bell tower, de blane is coming soon.

Senior, you need to look at public documentation (information
available to all) before you move your stunner to "kill" setting.

The ONLY statistical study on NPRM 98-143 Comments was done
INFORMALLY by one of the later Commenters who was apparently
interested enough to take the time to examine each and every one of
(then) over 2000 Comments. Those two are still in the FCC ECFS,
part of the 2.760 total documents on 98-143.

>
>Again, what is the date of that survey?

Bill, it doesn't really matter...:-) Once a "survey" was done, it is FIXED for all time as indicating "what hams do" years and years after... :-)

Case in point: FCC 98-143 was the NPRM for restructuring, was issued 5 years ago. The R&O giving the restructuring changes (99-412) was issued late in 1999. Anyone can go to the FCC ECFS and get any of the Comments on the record, they are still available, all 2,760 of them. The latest Comment, from a 1x3 who puts "PhD" after his name, bitched about the 5 WPM morse top rate, was filed in September 2003! Five years later a few folks haven't gotten the news... :-)

[in 2001 the FCC issued 01-108 to deny at least 5 petitions to bring back high-rate morse testing, two years before the "PhD" decided to complain. Gotta love all these aware and informed morsemen! :-)]

Alun, ALL the independent periodicals survive almost entirely on
sales of advertising space. Those sales are what keeps them
afloat. When advertising sales drop, so does the income for a
magazine and eventually too low a drop forces cancellation.

The subscription fees everyone pays goes almost entirely to what
are called "fulfillment services," the mailers, the distributors, the
keepers of mailing lists. That's the way it is in independent
periodical publishing in North America.

If one could get an independent accounting of QST, they would
very likely find out that QST survives mainly on advertising sales.
Plus the fact that they have an absolute demographic base of the
entire ARRL membership (still at about 170 thousand, give or take).
Independent periodicals have to get independent audits to prove
their edition sales numbers, don't have the backing of a large
membership base. 73 survived for a very long time as an independent
and CQ is still hanging in there. Ham Radio Magazine was starting
to drop in ad sales before 1990...publisher Skip Tenney correctly
read the about-to-be red writing on the wall and sold out to CQ. HR
managed to survive for 22 years as a niche independent.

Advertising budgets for amateur radio equipment are dropping among
all of the leader manufacturers...and increasing for other products
they make targeted to other radio services. Yaesu, Kenwood, and
Icom all make radios for other radio services. Few hams are aware
of that since they don't know much about those other radio services;
few are interested since they seem content to stay in one little room
of radio activity.

Len Anderson
retired (from regular hours) electronic engineer person
former associate editor at Ham Radio magazine

>But in these last 7 years, the ham community probably lost
>10% to SK status.

Lessee...if the average ham is licensed 60 years (that doesn't mean every ham is alive when the license expires), the death rate is 1/60th evey year. That's about 1.6% per year.

10% SK in 7 years is a very reasonable guess.

> Most of those were probbaly
>pro-code

Not really! Here's the published results from page 55 of QST for February, 1997 (rounding may result in totals of 99% or 101%):

(results are listed by age group - favor/oppose/no answer):

0-24 years - 85%/15%/0%
25-34 years - 52%/45%/3%

35-44 years - 58%/34%/7%
45-54 years - 66%/26%/8%
55-64 years - 55%/36%/9%
65+ years - 65%/27%/8

All ages - 63%/30%/8%

While the 65+ group is 2% more procodetest than the overall average, the next youngest group is 8% less procodetest.

>and it is likely the survey, if done today,
>would show the continuing shift away from support
>of code testing.

Maybe - or maybe not! Faced with the possibility of complete elimination, support for the code test might be greater. Lacking a more recent survey that is at least as scientific as the ARRL/READEX survey, we just don't know.

>> >believe you recenty posted the results of a survey done by some club that

It's real behavior by a few hams. No "real ham" behaves that way.

>Hopefully
>it is just an aberration of some hams...although we have

>more than one or two posters in the past.

In these parts, such behavior by club members would get them a good talking-to.
If it persisted, they'd be ex-members.

In any club I know of, anyway.

>> >Because of that, few who oppose code testing, and even fewer Technicians,

You just verified my point that FCC could, indeed, just dump Element 1 without
the whole NPRM cycle.

It's just a recommendation, though - not a requirement.

>That recommendation is consistent with the basis and purpose
>of the ARS, both as defined by the FCC and the ITU.

So is touch typing, knowing Morse code, knowing how to solder, and a whole
bunch of other things.

>While not strictly mandatory, it is provided as "good advice to
>administrations" on what sorts of theoretical knowledge hams
>should possess.

Sure - but it's just a recommendation.

Can we really say that the questions on RTTY in the current written tests really assure that hams have theoretical knowledge of RTTY at the level recommended by M-1544?

And note this:

When I took my most recent ham exam that counted for a license, the only TOR mode authorized for hams was 60 wpm Baudot code RTTY using FSK or OOK. (Shift had to be less than 900 Hz, as I recall.

No PSK-31, no packet, no PACTOR or even AMTOR. Not even ASCII!

Back then the power limit was different, repeater rules were very different, and the 30, 17 or 12 meter bands weren't even a distant dream. The technology used in most ham rigs was also very different.

And the tests we took back then had lots of things in them that are no longer in the current tests. Neutralization of triode RF power amplifiers, for example.....

In the intervening years, FCC has trusted me (and almost every other ham from those days who hasn't lost interest) to keep current with amateur radio. FCC has renewed almost all of our licenses without question, and we're allowed to use those new modes and technologies even though we've never passed any tests on them.

If FCC trusts us OTs to learn as we go, why not the new folks?

If memory serves, Heath didn't throw in the towel, per se.

Zenith bought them out for their computer(s) and terminals and then Zenith
tossed out nearly all of Heath except those items.

About two years ago, I was in a Home Depot and came across some
sensory-motion fictures that were labeled as "Zenith-Heath". What that is (or
was) about, I have no idea.

My first kit was a Heath Q-1. I was ten or eleven years old and had bought an
used S-38B with my paper route money.

I used ,y Dad's 350-watt soldering iron and cold soldered (what else?) every
connection.

A friendly ham helped me out.

Poor no code goofballs. They still haven't figured it out. We don't want a bunch of unqualified, ten four screaming, under educated, individuals poluting up the spectrum.

We were doing just fine when we had 250K licensed. In fact the QRM is just as bad on HF as it was then. The only difference is the folks on the air actually KNEW SOMETHING.

Actually that's not true. I can recall a number of times hearing blacks call each other by that name, and it was more a term of endearment than a perjorative. But the same word tossed out by the wrong person sure wouldn't be.

You raise an interesting question, Carl. How exactly should the
average ham go about proving that the RFI is indeed BPL, when the BPL
people say
"That's not us!'??

One major problem that is being ignored is that these alleged 20 wpm Extras are the multiple guess guys. Probably doing good to make it to ten WPM. Just hunt, peck and hope.

One other 'minor' detail, is that they ALL were taught on 11 meters.

How many real hams. Say those that were not infected by the CB crap do these things? Dang few I would venture.

Unless they were like Polly and Billy Jack....Conditionals that were Grandfathered in back in the early 60s.

Lets see some real figures. Not conjecture.

Spark was banned. Wide band FM was banned from HF. For decades all we could do was talk and do CW. It was years fighting to get SSTV allowed. Then digital, other than RTTY was another long road.

Most of the time the FCC simply didn't bother to authorize a new mode. Thats how it works Hug and Chalk.

FWIW I haven't run into any documented instances of BPL operating as
high as 50 Mhz yet. The BPL signals I've listened to in the Emmaus PA
ran between 3 Mhz to somewhere just above 22 Mhz. That's pretty narrow
by "broadband standards". If/when they get more users doing who knows
what I suppose the BPL band edges will expand both up & down.

>no one.

Sorry, Kim, that's too much of a stretch. "No one" means "not anyone" or "not
even one person". Zero people, in other words.

"Almost no one" is what I think you intended to write. As in "Almost no one
wants to see Morse use banned".

>I believe that the number of folks who wish to see an end to CW in
>the bands of the ARS are so miniscule that the projection of that ever being
>a reality is moot.
>
I hope you are right. However, I recall a time when the same could be said of
those who wished to see an end to code testing.

"Never" is a very long time. How many things have you seen in your lifetime
that, if someone had told you about them years ago, you would have said "That
will *never* happen in my lifetime"?

Look who is the new governor of California. Of course he's really just a front
man for term-limited Pete Wilson, but if someone had told you when the first
Conan movie came out that you were looking at the future governor of
California....
>> >

"Never" is a very long time.

>Has any mode ever been banned?

Yes. "Mode B" (spark) transmissions were banned for amateurs in 1927. Oddly enough, they were not banned for the maritime services until 1966.

Amateur use of spark had just about disappeared by 1925, however.

>Sure, rules have changed; rules pertaining to power
>limits, rules pertaining to test requirements, rules pertaining even (I
>believe) to *where* in the bands that different modes are allowed or not.

Sure. For example, once upon a time, the voice part of 80 meters was the low end.

>But I doubt a mode would ever be banned, once implemented and in place.

I hope you are right. But MARS does not allow the use of the mode on their frequencies, by order of the military person in charge. Even if the volunteers want to use it, they're not allowed. Why? No reason given. Many MARS folks quit over that ruling.

>> >There are a few who have been proponents of seeing the end of CW;

There was a docket in the 1970s that would have limited the bandwidth of all
modes on HF to 3.5 kHz in the 'phone subbands. That would have effectively
banned AM and any form of FM below 30 MHz. It was seriously considered.

October 9, 2003
F.C.C. Ruling Could Allow Use Of "F-word" On T.V.
By Jon Hanian BOISE -

In broadcasting, dropping the so called "F-bomb" goes over like an H-bomb. But the FCC has now ruled that the use of the "F-word" by U-2 frontman "Bono" at the Golden Globe awards **did not** violate federal indecency rules.

The FCC rules say the use of the word must be "patently offensive" to be considered indecent. But the FCC ruled that when Bono received a Golden Globe award on television and said, "this is really f * * * * * * brilliant," he did not violate FCC rules. They ruled that the word was used as an adjective instead of a verb and therefore, while it may have been crude, it was not "patently offensive."

If that FCC decision confuses you, think about how those of us in the media are trying to to interpret it.

Dr. Rick Moore of the Boise State University Communications Department believes this decision will muddy the already muddy waters for broadcasters who struggle with what is acceptable and unacceptable speech. "I think it might give some people a sense of greater license to not be quite so tight on that bleep button as they have been in the past," said Moore.

At Idaho 2 News, General Manager Jeff Anderson says while the ruling may make an already murky situation murkier, KBCI TV will not air the F-word in any context. "We have an obligation to program in the public interest, and in my opinion broadcasting programming with that kind of language is inappropriate and we won't do it," he said.

(Story 2)

FCC relaxes TV rules on use of f-word
By Chris Baker
THE WASHINGTON TIMES

Remember comedian George Carlin's list of the seven dirty words you can't say on television?

It just got a little shorter.

The Federal Communications Commission ruled this month that Irish rocker Bono did not violate federal indecency rules when he used the f-word during an acceptance speech at the Golden Globe Awards, which NBC broadcast in January.

"This is really, really [expletive] brilliant," Bono said during the ceremony, using the f-word as an adjective. The speech aired live on the East Coast. The FCC said it received 234 complaints, all but 17 of them from individuals associated with the Parents Television Council, a nonprofit group that monitors programs for adult content.

The FCC rejected the complaints Oct. 3 in a written statement that used the f-word far more often than Bono did on the air. David H. Solomon, chief of the FCC's enforcement bureau, said the word "may be crude and offensive, but, in the context presented here, did not describe sexual or excretory organs and activities."

That distinction is a key to test whether a statement meets a federal standard for broadcast indecency, according to FCC staffers. Mr. Solomon said in the ruling that Bono used the vulgarity as an adjective or to emphasize an exclamation and that "the use of specific words, including expletives or other 'four-letter words' does not render material obscene."

Laura Mahaney, director of corporate and entertainment affairs for the Parents Television Council, has vowed an appeal. "The ruling is outrageous. It's splitting hairs," she said.

Activists said they fear the FCC's ruling will allow the f-word and other vulgarities to become more common in prime-time television. "We're gradually getting to the point where nothing will be off-limits," said Jim O'Connor, president of the Cuss Control Academy, a Lake Forest, Ill., group that advises individuals on ways to limit cursing. Spokesmen for NBC and the other major broadcast networks rejected the suggestion that the ruling will lead to more salty language in prime time.

However, they acknowledge they face heavy competition from cable networks such as HBO and FX, which have more freedom to air edgy shows because they do not deliver programs over the FCC-regulated airwaves.

The FCC's Enforcement Bureau issued the ruling on Bono's language. The five-member FCC panel did not vote on the matter. Commissioner Michael J. Copps, one of two Democrats on the panel, said he has not reviewed the case, but if it had come before him, he may not have dismissed the complaints.

"I do believe under the right circumstances that a word in
and of itself can be indecent without having to fit in
with a wider context," he said.

Six years ago, activists and the Clinton administration pushed the
networks to adopt a content-ratings system that would enable V-chips
to block programs parents deemed inappropriate.
At the time, some network executives feared the ratings system
would lead to bland scripts and cost them viewers.
For the most part, broadcasters have continued to push the
limits of decorum with programs such as "NYPD Blue," a pioneer
in the use of four-letter words. The show crossed another line
last season when ABC permitted writers to slip a coarse word
for bull dung into an episode.

In the first group, there is only five petitions that request deletion
of all code exams. The Beauregard petition, RM-10781, retains
the 5 wpm code exam for both General and Extra. The Reich,
RM-10784, retains it for Extra.

Well, you mentioned that "spark" was banned. Hmmmm, so there's been a ban
on a mode. However, would the ban have been a response to bandwidth usage?
I mean would spark violate the spirit of the R&R as they exist today?

BPL has a unique "signature" (in the spectral/time domains) that can be
used to ID it.

Since there are different systems (SS from main.net and OFDM from Amperion,
for example) they have different signatures, which are distinct from other
sources
of interference and more traditional power line noise (of course the
utilities are
responsible for fixing the latter, too ... though their record is poor).

Spark transmissions were outlawed (as well they should have been) so
the precedent exists.

On a more immediate note, as relates to your discussion on AM phone,
I'd have to dig out some old material to get all the facts exactly in
order, but there was a petition (in the 70's?) which the I
believe the FCC had moved to the stage of an NPRM to outlaw AM
transmissions on the HF amateur bands. The rationale was that AM was
(is?) wasteful of spectrum because SSB can convey the same message in
half the bandwidth oF DSB AM phone and without those awful sounding
hetrodyning carriers. The proposal narrowly missed being adopted,
only because of a huge hue and cry from thousands of AM-forever hams
(who drew ARRL into the fight on their side). Today you're hard
pressed to find any remaining AM-ers on the band, and if the petition
were re-introduced it might well be adopted due to lack of organized
opposition. Most of the AM-forever crowd has moved to "forever".

I submit that what is needed is detailed information.
Who is doing the testing? I think that only Consumers Energy
distributes electric power in that area - they would be the people to
ask.
Is more than one system being tested?
When will the tests take place?
From where to where is the test link?

With details one can plan for before and after testing. Who can
sniff out the details?

Not at all, but I also believe that when it is obvious to the FCC that
a rule change is appropriate...even if a majority of hams oppose
that change...the FCC will do what it believes is right and in the
public interest. 98-143 serves as a bellweather to that since, if
most hams favored 5wpm General and 12 wpm Extra, the FCC
didn't buy it.

Bill:

One year ago, I traded in a perfectly good 2001 Toyota Corolla LE with a 5-speed manual gearbox for a new 2003 model with an automatic transmission. However, I still see the need for code testing in the ARS. I own a few rifles and handguns, but wouldn't want to bet my life on my proficiency with a compound bow. However, I still see the need for code testing in the ARS. How do you explain that?

Bill:

Since when am I personally responsible for the outcomes of 98-143 and WRC-03? I filed comments on 98-143 and the FCC "Restructured" the code requirement down to 5 WPM. I didn't have any way to influence the outcome of WRC-03. In both cases, it wasn't an individual failure on my part. Now, if you are using a collective "you" to include all NCTA's, then you may have a point. For instance, if FISTS hadn't taken it's "non-political" stance during the 98-143 comment period, perhaps things could have come out differently.

Polar phase shift, eh? Seems to be a lot of that going around on PSK-31
these days! Like I said, I think it's a great mode, but it hasn't caused me
to toss my CW keys in the trash -- yet!

>"Too many clowns and not enough ringmasters!"

Dick:

"ID4" is the production company's short name for the film which was
released under the name "Independence Day." It was only one film
and had no sequels. However, I really do suggest that you do see
it. It shows what happens when our planet is invaded by No-code
Techs. They get beat by those who know how to use Morse/CW.

Kim:

The written exams required by the FAA for one to obtain a pilot's license is a "government sponsored requirement."

>If we use your expectation for the
>requirement above, then I respond that the continuance of the mode of CW is
>not the responsiblity of the government, nor should it be.

Why should the government have the responsibility to "force" people to take exams in order to obtain a pilot's license? Where is the government's "responsibility" to create a growing number of licensed aircraft pilots?

>The FCC, the
>government, has decided that CW is no longer needed for its expectation and
>interpretation of what the ARS is about. To argue with that is merely
>spinning our wheels at this point--it's a done deal. So, if your basic
>support of the CW test as a requirement for ham radio is that it will keep

Well, you have a right to that disagreement, Kim. That doesn't mean you are correct in your thinking, however.

>2) Using the statement you make, above: would you not also agree then, that
>the choice by some people to stop short of HF privileges, simply because of
>a CW test requirement, depletes the overall supply of HF, therefore CW,
>users anyway?

I've never had any problem with hams who decide to stop themselves at the Technician class, unless and until they begin to whine about code testing, and make insulting inferences about those who support code testing.

>I'd rather dismiss the test requirement for CW and have HF
>thrive and active for the ARS.

There was never a problem with HF use "thriving" even when we had code testing up to 20 WPM, Kim, so what will be the difference in the ECTA?

>The influence of good amateur radio
>operators who appreciate the value, tradition, and history of CW will always
>be a positive effect on the maintenance of the population of CW users.

A lot of those CW users only became CW users because of the requirement to be tested in Morse code proficiency. How does "history" and "tradition" play a role in causing prospective licensed pilots to learn and master a wide variety of knowledge necessary for the safe operation of an aircraft?

>Again, it is not up the government to be the arm of CW continuance.

Again, why is it up to government to be the arm of the continuance of aviation -- and how do the FAA's pilot licensing requirements meet that need?

>> >Until, (UNTIL, *until*) it is clearly understood that seeking the end of

I am offended by that word, Kim -- and if you are yourself, why did you use it?
I personally have sanitized that word from my vocabulary, both spoken and
in writing. I never mention it even in jest or as an example.

>isn't derogatory until some
>bigoted person uses it against another person, either. No hazard, at all,
>in being honest.

That word is always derogatory because it is calculated to be demeaning to
people who happen to be of the Negro (Latin for black) race. The fact that
you use it even in an attempt to prove some nebulous point about honesty
suggests that you are, indeed, prejudiced and bigoted.

Carl:

Yeah, you *would* assert that, all right. However, I am singularly
unconcerned with those who may have been "soured" on code by
being "forced" to learn it.

> ... of course,
>some percentage of folks decided they liked code and continued to
>use it, but MANY simply endured something they had no interest in
>to get past the test, then "threw away the key."

Let's say that as many as 80% of hams who were "forced" to learn the
code subsequently "threw away the key." That leaves 20% (I believe
my figures are close to reality, anyway, I believe in Pareto's Principle)
of hams who subsequently became active CW operators with
increasing levels of proficiency as they gained OTA experience. I
find that to be quite acceptable.

>Remember the old adage "honey is better than vinegar."

Well, even those who "threw away the key" got the "honey" in the
form of increased HF operating privileges. No harm, no foul.

>> In the absence of a code testing requirement, there will be progressively
>> fewer hams who have never been exposed to learning the code as a

>> concepts.
>
>Translation: Larry and his "kindred spirits" are either unwilling to expend
>the effort to (or incapable of *politely*) encourage people to "give the
>code a try and see if you like it."

Carl, I have, on many occasions, very patiently, politely, and
enthusiastically explained all of the fun and operating satisfaction that
I and other hams have derived from using CW. I have offered all the

encouragement I can to anyone willing to give it a try. The one thing that I can't do is learn it for them. That they have to do for themselves, if they *want* to do so. In the past, the thing that made them want to learn the code was to gain HF operating privileges. Now, it would seem that even that incentive will be given away, and soon. If the use of CW declines in the ECTA, it will not be my fault, as much as you would like it to be.

>And, they are apparently unwilling to
>take "No thanks, not interested" for an answer.

I've always been willing to take this answer, for it is they who had to bear the consequences of no HF privileges. Now, that will no longer be the case...and phone users like yourself will have a lot more company on the phone bands in the near future. I just hope it's the kind of company you appreciate.

>Thus, they continue to
>seek to have the FCC mandate an arguably counter-productive "recruiting
>program" for them ...

I see nothing "counter-productive" in the requirement to learn and gain greater proficiency in a useful communications skill. What I don't understand is why you apparently do.

So to repeat, how does the average ham, whom you have exhorted to
"make sure it's BPL that you're complaining about", go about detecting
and sorting which is what, given that spectral analysis gear, and the
training to use it if it was available, is virtually nonexistnt in the
average hamshack? Is there a aural signature or more than one for the
different BPL modes? Is the Emmaus test site video/audio clip
reresentative enough to make the call, or is something more needed?
I expect that if it was indeed BPL RFI it would follow the power grid
pretty closely with signal strength highest when close, and tapering off
with distance away from the lines. But from the one report posted here
of a ham who said he heard it from a distance of 60 miles, seems like
propagation will play into the picture-to be expected at HF as all
experienced HF ham operators know. Or maybe *he* mis-identified it!

So who do hams call for assistance, the ARRL? I haven't seen anything
from them suggesting that.

I seriously doubt the economics of BPL will ever bring it where I
live, even if it is approved, but others need to know.

I will miss that mag as well.... in the 70's and 80's I can honestly say it
was almost better than QST or CQ. You definitely got your money's worth in
the amount of content. In the 90's, it definitely started to dwindle
though.

I may not have agreed with everything Ole' Wayney said, but I definitely
support him in having the balls to say what he was thinking, even if the
"old guard" didn't like it. He did have a "few" really good ideas, and even
some that were way ahead of the time, but later became a reality.

After having gone to the ARRL site and listened to the examples, all I
can say is it sounds just like precipitation static and/or loose
connections. No way would I be able to identify one from the other.
I'm just going to have to complain every time I hear noise and make
recordings. If it's noisy enough to be a problem it should be fixed.

BTW, most of the links failed and instead I ended up hijacked to QSL
dot net. (they call it redirecting, but if I didn't select to go
there, I don't want to go there...I'll settle for the 404 screen
instead of giving some one advertizing points.)

The ARRL website is loaded with video and/or audio files which will
clearly demonstrate what the various forms of BPL signals sound like
and the havoc they generate throughout the HF spectrum.

http://www.arrl.org/tis/info/HTML/plc/#Video

> Is it worse that the Pennsylvania QSO party?

If BBL is broadly implemented you won't have to worry about the PAQP.
There won't be a PAQP.

Either way, there are the obvious harmonics to consider as well. Granted,
not as strong as the original offending signal, but a problem non-the-less.

I will let ya all know what happens along the way with all of this. As
stated earlier, it would be much cheaper of an investment to get the phone
companies (Ameritech in my case) to put more switching stations to make DSL
more available.......

Yes and no Carl.... if it makes it impossible to RECIEVE our local broadcast
stations, I would think that the local broadcasters would be VERY interested
to know that nobody is getting thier signal, except cable subscribers.

The ARRL website is loaded with video and/or audio files which will
clearly demonstrate what the various forms of BPL signals sound like
and the havoc they generate throughout the HF spectrum. This site also
has heaps of text tech info on BPL.

http://www.arrl.org/tis/info/HTML/plc/#Video

> Is it worse that the Pennsylvania QSO party?

If BPL is broadly implemented you won't have to worry about the PAQP.
There won't be a PAQP. Carl and I have listened to the real thing
together, I expect he'll agree with my assessment.

Great, let me guess, you must be another one of those lazy, anything goes, pot smoking liberals, from B.C., that lives off government handouts. How nice. I love paying the highest taxes in the civilized world. No wonder we can't get rid of the liberal dictatorship. Give the people pot to smoke, filth on TV, and the "F" word, what more could you ask for. At least the "Yanks" you call them, have a culture and respect their traditions. I can't say that for canaduh. If it weren't for the "Yanks", we would probably be speaking Russian. Now if the Americans would like to take over canadah.....please!!!

The ARRL web site (www.arrl.org) has a video that can be downloaded that shows how severe this interference can be. They took a vehicle equipped with HF equipment and drove around areas where BPL is in use as a test program. The noise levels are horrendous.

Yes, those were great if you needed something to get your blood boiling.
Sometimes he had a good cause to champion, but most of the time he was
just looking to start a controversy. (The print version of today's
Usenet trolls, I suppose.) I'd go back into the back issues to cite
some examples, but I've long since disposed of them.

That is, if they don't get wise and start looking into ways of
publishing that do away with the costs of publishing. Monitoring Times
has done it right by making their magazine available in PDF format,
downloadable each month from their FTP site. They provide a smaller
file with somewhat lower resolution, suitable for downloading by dial-up
subscribers, plus a larger, higher-res version for those of us fortunate
enough to have access to broadband Internet connections. I put each
month's issues on CD-ROM so that they're readily available for
reference, without having to keep a bunch of magazines around. (I'm
always citing this as an example, so if I've gotten annoying by saying
it so many times I apologize.)

If only the rest of the publishers would consider similar options....

If the people, like you, that do love it, it will live on through proper promotion of it. It's just that simple. Of all the "coded hams" out there, not ALL of them are code lovers, and I would place a bet that some couldn't pass the current 5wpm test as they have not used it since their examinations. But in the same turn there are some that love it and will pass it on. As long as it is mentored properly.

How will we
> convince new hams to invest the time and effort to learn this useful
> communications skill when they are not offered the incentive of
> increased operating privileges?

Gee, if it is so useful, then why bribe them?? It should be sooooo damned good as you say, they should automatically want to flock right to it. People will invest the time and effort if they see value and usefullness in it.

I'm asking you because I don't have
> the answers. I'm one of those hams who learned the code because

Pure BS....... words mean nothing!!! It's the racist asshole behind the
words you need to be concerned with. Remember the phrase "Sticks and stones
may break my bones, but names will never hurt me?" I am more concerned with
the sticks and stones!!!!! :)

Actually Ron, I didn't write the above point on grammatical content.

The FCC did (!) in their 'official' decision. Guess it proves the point
that the FCC *should be regulating technical issues* and not issues
of program content.

Your typical Washington DC bureaucracy at work.

When their not wasting money their likely wasting time and putting
out useless and/or esoteric info that's not worth the ink used to
coat the paper saidsame is printed upon.

> (who drew ARRL into the fight on their side).
>

Well, I would expect the same would happen if it came up again--*and* there
were enough people to bear pressure on the FCC to retain the mode. However,
if a mode is within current standards of technology (i.e., with respect to
the FCC R&R) would there really be a reason the FCC would entertain the
thought of banning it? I just don't see them doing that--but then I am an
ultimate optimist.

>
> Today you're hard
> pressed to find any remaining AM-ers on the band, and if the petition

>

Whoooohooooo, I know a few of those "forever" gang down here--and they are as passionate about AM as any ardent CW fan! Dems would be fightin' words in this neck 'o the woods. At any rate, so you're bringing up the scenario that someone outside the FCC would bring up a petition to ban a mode. Hmmmmmm, hadn't thought of that--but why? Why would anyone want to have a mode banned? I mean, seriously, what would be gained?

By my review, it took 3 posts to have the slamming and insults begin. And,
DICK wins the prize:

I think Jim was stretching it a little far to decide to be offended by the phrase "jump through the hoop" and "waste their valuable time." But, that's my opinion...

Harmonics, Carl, harmonics. Those pulses sounded awful clicky on the
video. You heard 'em yourself - what do you speculate their harmonic
content is like?

If it can be shown that thew harmonics are a source of RFI as well as
the fundamentals, won't that be another tool to use against BPL?

I mentioned 6 meters because Ryan mentioned his interst in that band.

'BPL - it's not just an HF problem'...

>When was the survey done?

Late 1996. Results in Feb 1997 QST

>If it is more than two years old, it
>is almost useless as there has been significant change
>over the last few years.

What significant change? How do we know what the change has been since restructuring?

At least a few hams have publicly renounced their NCI membership here, saying that 5 wpm was the right level and they could not support complete code test elimination. Maybe they're an anomaly - maybe not.
>
>> The comments to 98-143 were categorized by an NCI staffer (disproving any
>> possible claim of bias by procodetest evaluation of the comments) and the

>> wpm and sunset clause.
>
>Now it also must be pointed out that for the initial several weeks
>during 98-143 comment phase, those commenting were not
>aware of the position being put forth by NCI.

So? Anyone could revise their comments. And the comment period was extremely long, so time wasn't a factor.

>How many people
>at the time may who said they support ARRLs stance
>may have supported NCI's position will never be known.

Sounds like straw-grasping to me, Bill. Suppose FISTS had jumped in with a proposal? Suppose ARRL had gone for 5/13/20 wpm? Etc.

>Even
>so, the issue is NOT to be decided by any "vote" or majority opinion

>of any group or even the public at large. The decision will be,
>as it should be, based on what should be proper regulatory
>setting of licensing requirments.

I'll bet that if the majority opinion had been "5 wpm and drop it completely as soon as the treaty allows" we'd no longer have Element 1. And if there had been a bigger majority for testing greater than 5 wpm, we'd have that, too.

>
>> Of course things may have changed since then. But for someone to claim,

>in the first place. If it is irrelevent, why bring it up?

I did not mention anything about young people "demonstrating". Len did.

My point was that the strongest majority of procodetest folks was the youngest age group - according to the survey, anyway.

>

>> I agree...surveys, votes, etc hold little sway with the FCC anyway.

>So you think Bill Cross is obfuscating when he says that FCC wants the
>ham community to decide what our rules are to be, for us to reach a
>concensus??

Not at all!

What Mr. Cross (W3TN) means, I think, is that the *preferred* method of
rulemaking is for the amateur community to "discuss amongst themselves" and
come up with a consensus plan for some issue or other. Then present said plan
to FCC. Example: New Q&A pool is developed by QPC and presented to FCC for
approval. Few or no protests to the new pool; consensus acheived. FCC approves
new pool. Quick and easy.

But when consensus cannot be reached, FCC has to make a decision. And that
decision is based on many factors. In the case of code testing in regards to
98-143, the factors for reducing code testing won and the majority opinion lost
- in FCC's opinion. The medical waiver headaches alone.....(One could argue
that there was a consensus reached that medical waivers were not a good idea.
So FCC eliminated them....)

Suppose, just suppose, that the comments to 98-143 had been 80-90% to reduce to
5 wpm to meet S25.5 and eliminate all code testing as soon as the treaty
permitted. Do you think Element 1 would still be in place today? I don't.

>and a (very) limited amount of homebrewing. Do you remember the
>construction articles of the 50s and 60s?

And the '70s, '80s, '90s...

Still plenty of construction going on. But a lot of it winds up on websites
instead of magazine pages.

Homebrewing is, in part, the victim of affluence and less expensive
manufacturing methods.

>Back then, there were a lot of
>home brew projects.

Sure - and most of them were the result of work done by hams in their own
workshops.

>Even Heathkit threw in the towel a couple of decades
>ago.

Heathkit ran into several problems, but the main one was that the basic
advantage of kitbuilding was the cost savings resulting from eliminating labor
cost. When electronics assembly required lots of hand labor, that savings gave
Heath an edge.

But kits are not dead. See

http://www.elecraft.com

for a look at what's available today. Over 5000 Elecraft rigs have been built
(3500+ K2s and 1500+ K1s, plus accessories and now the new KX1).

> How much did anyone learn dropping in an integrated circuit that

There was never an KiloByte.

That did seem to be the intended title as they were getting ready
to publish the first issue. But by the time it was published, it
was Kilobaud. I have many of the issues, including the first six,
and it was always Kilobaud, until they changed the name to Kilobaud
Microcomputing and then just Microcomputer, about five years later.

I've heard varying stories on why the name was changed before the
magazine came out. The oldest would be that it would result in
a lawsuit from Byte, though I'm not sure if this had outright been
threatened or someone just urged Wayne to change his mind on this
because of the potential problem.

But more recently, someone pointed out that very briefly, Byte
ran a cartoon strip entitled "Kilobyte" and they suggested it
was a deliberate attempt at protecting the name. I'm not sure
if that's possible, but it was a lousy cartoon strip, having something
to do with "Star Trek" like characters. I never did go looking to
see exactly when they ran.

BPL should certainly boost KW and 10KW rf amplifier sales. Anything that
will work through the power company noise. Could be a little tough on the
neighbors, however. Especially since newer TVs seem to have less and less
shielding.

What it tells me is that not many here care to have a "non-degraded
"discussion. And that goes for both sides. It didn't take long at all
for that to happen. And I noted that it wouldn't look good for the side
that started things rolling downhill.

Dale Carnegie courses for everyone!

> mode banned? I mean, seriously, what would be gained?

Spark is very, very wideband. This was probably a good thing in th
early days of radio, since the transmitter and reciever didn't have to
be tuned too closely to each other.

A modern day example might be a failing transformer on a power line. If
something is arcing inside it or to a connection, it can put out a lot
of rf noise that extends over a lot of bandwidth. It would mess with
almost any rf device in the house.

That's why spark was banned.

As for AM, I have no problem with it. It does use more bandwidth
though, and that is why some hams and others don't like it. But to me
it's a cool "retro" mode. Not very efficient, but who says it has to be?

As to "what would be gained", that obviously depends on who is advancing the petition and what their agenda might be.

There's another more contemporary example than the AM situation. On 20M there is a small group of experimenters who are playing with something they call "enhanced SSB". This is regular old SSB, but these guys are enamored of excellent audio quality and spend a great deal of time (and money) modifying their radios and microphone/audio systems to gain the very best audio fidelity that they can manage. This results in bandwidth usage greater than typical SSB (nominally 3KHz) but less than AM (nominally 6KHz).

This operation, although it consists of only a small number of enthusiasts (perhaps less than 20 stations) and is situated on only one small segment of the HF bands, has been the subject of many complaints to the FCC (for occupying more bandwidth than necessary), and Hollingsworth has gone so far as to make note of it in a speech at a hamfest last winter. He warned that such use of the spectrum might lead to FCC rule changes.

Now mind you, this "mode" uses less space than an AM signal conveying the same information. It logically follows that if this "mode" is banned for being spectrum-inefficient, then the even-more-spectrum-inefficient DSB AM mode probably would fall to the same regulatory action. (I'm not suggesting that FCC is always logical, however <grin>.)

So back to your "Why would anyone want to have a mode banned?" question. Ask yourself why people have targeted a few stations on "enhanced SSB" (perhaps 4.5KHz wide), but do not complain about many more DSB AM stations on the bands (perhaps 6KHz wide)? Could it be that they simply have a personal agenda which is not evident from the facts?

Now look at the persistent demeaning language here against Morse code users, and it doesn't take much imagination to expect that a "no more CW use" petition might show up at the Commission some day soon.

As you know, I don't think Morse testing is any longer a regulatory necessity, but I am very much a CW-lover and have a low-level (but

growing) concern that the end of Morse testing is only a first step on some peoples agenda.

"Bill Sohl" <billsohl@mindspring.com> wrote

>
> Yet AM is still allowed.
>

Yes, it certainly is. But for how long?

Riley Hollingsworth told a Richmond, Virginia hamfest last spring (speaking of "enhanced SSB") that deliberately operating a wideband mode in a crowded spectrum is "shortsighted and rude," may be ignoring the "minimum bandwidth necessary" rule. Now if 4.5KHz-wide signals are shortsighted and rude, then it logically follows that 6KHz-wide AM signals containing the same information are even more shortsighted and rude.

He also hinted that continued complaints "WILL (my emphasis) lead to pressure on the FCC to revise the Amateur Service rules." Would you expect DSB AM to survive such revision?

Cheers to you too,

de Hans, K0HB

That helps a lot. I see what was meant by "geiger counter" sound now, as
well as the other sort of noise.

I do have a spectrum analyzer here, so that will help, when the day comes.
At the moment, the only broadband available here is DSL or cable modem,
which have been well-behaved neighbors. I'm using a cable modem now, and I
don't notice anything from it, even when I tune into the bands that it uses.
We have regular overflights scanning for leakage, so it appears that Comcast
is making the effort.

I still remember how to change channels.

Programming is driven by revenue.
If people watch it, then the ad time is worth money, and whatever it is,
we'll get more of it.
If people turn it off, then the ad time looses value, and whatever it is, it
will get pulled.

Hard to imagine a more democratic method of selection.

Lets see now...3 to 22 Mhz.....80/75, 40, 30, 20, 17 and 15 meters turned into a wideband wasteland. With plans to expand to 12, 10, and six meters. Yep...thats a real good thing.

We could all go to 160 and fight the 50/9 QRN most of the year, or 12 and ten which are dead during the low of the cycle, which we are heading for.

Yep, lots to look forward to.

Surely that file isn't on the members-only side of the site, is it?

Certainly it shouldn't be, and if so I intend to protest.

Indeed! And don't forget the skip issue-if it works for QRP hams it'll
work for BPL, too.

>
>That's why spark was banned.

That's one reason.

Another was that almost nobody was using it after about 1924-5, but there was
concern about folks looking at "old" books and thinking they could still use
it.

Consider how fast the change came. When hams got back on the air after WW1,
spark was undisputed king. Five years later, it was a memory. The difference
between a "state of the art" 1919 ham station and a similar one in 1939 is
simply amazing. Almost nothing from the former would still be in the latter.
>

> As for AM, I have no problem with it. It does use more bandwidth
>though, and that is why some hams and others don't like it. But to me
>it's a cool "retro" mode. Not very efficient, but who says it has to be?
>
Depends how you define efficiency. AM operations tend to be roundtables where many hams gather on one freq. So the number of "Hz used per ham on the air" can be pretty low.

I believe that is the official position of NCI, but sometimes "body language" gives a different perception.

For example, on our web home page, NCI goes to some length to make it's position "crystal clear" that

"2. Manual radiotelegraphy communications has been superceded by more modern, reliable, accurate, faster and efficient means of communication. "

That "crystal clear" statement doesn't speak to TESTING at all. It speaks to things like reliability, accuracy, speed, and efficiency of communications. In other words, issues surrounding the USE of the mode. That sort of official statement, along with the propensity of the Executive Director to publicly portray Morse USERS in a less-than-favorable light, creates impressions which run counter to your assertion above.

I have separately petitioned the Board of Directors to make a single simple organizational change which would go MILES toward reinforcing your statement above. I'll await with interest the report of the next quarterly meeting of the Board of Directors.

If you have a problem with amateur radio license test questions, senior,
I'd suggest you contact the VEC Question Pool Committee. They are
the ones originating the content and on what subjects. FCC no longer
requires a certain percentage of specific subjects in the pool.

>>> Both are valuable to the radio amateur. Whether either should be tested is
>>> a matter of opinion, nothing more.

>>THEORETICAL knowledge that hams should possess ... IIRC,

>>it's ITU-R Recommendation M.1544 ...
>
>It's just a recommendation, though - not a requirement.

Why such an absolute on "requirement" versus "recommendation?"

ITU-R documents are NOT law per se. Those are common-
agreement items for _administrations_ to consider.

At NO time will there be ANY ITU-R "police officials" arresting
ANYONE for any violations of ITU-R radio regulations or
recommendations, ANY radio service ANYWHERE.

>>That recommendation is consistent with the basis and purpose
>>of the ARS, both as defined by the FCC and the ITU.
>
>So is touch typing, knowing Morse code, knowing how to solder, and a whole
>bunch of other things.

Is the "basis and purpose of the ARS" all about morse code?

I don't think so, not in any observation of the FCC regulations.

>>While not strictly mandatory, it is provided as "good advice to
>>administrations" on what sorts of theoretical knowledge hams
>>should possess.
>
>Sure - but it's just a recommendation.

Irrelevant. NO ONE can be arrested for violation of an ITU-R
"regulation." Quit trying to belabor an irrelevant point.

>Can we really say that the questions on RTTY in the current written tests
>really assure that hams have theoretical knowledge of RTTY at the level

>
>And note this:
>
>When I took my most recent ham exam that counted for a license, the only TOR
>mode authorized for hams was 60 wpm Baudot code RTTY using FSK or OOK. (Shift
had to be less than 900 Hz, as I recall.

Oh, my. When I first USED teleprinters...NO formal classes, NO test,
just an on-the-job informal explanatin-instruction...it was over a decade
before your precious FCC test. The standard "shift" (also referred to as
"spread" colloquially) was 850 Hz Mark to Space in FSK only.

"TOR" is a partial acronym referring to "Teleprinter Over Radio" and came
into use FIRST in the commercial communications field, NOT amateur.

>No PSK-31, no packet, no PACTOR or even AMTOR. Not even ASCII!

The American Standard Code for Information Interchange was divised
in the 1950s, senior, by both commercial communications and the

new Information Technology activities (than referred to as just
"computers").

"Packet" forms of net transmission already existed in the commercial
and military communications services of the 1940s. The most
rudimentary form is in the "automatic transmission distributor" portion
of teleprinter paper tape terminals (designed, manufactured by
Teletype Corporation among others). Most terminals had dual tape
readers to accept prepared tapes. As one tape finished in one reader,
the other reader began its tape; throughput was continuous as long
as an operator kept loading new tapes. This was referred to as a
"torn tape relay" system. Receiving printer-punchers were also dual
but for tape supply, not individual messages. Manual operators
would observe EOM symbols and new message address preambles
to manually separate (or "tear") received tape messages. Station
ADA had over 170 of such terminals in use 24/7.

Washington Army Radio ("WAR") was already using an automatic
electromechanical switching teleprinter message exchange system
in the mid 1950s. "Torn tape" operators were not required since the
switching system automatically routed the electrical loop signal to
the appropriate outgoing circuit through address preamble information.
The only manual operation necessary in relaying was if there was
circuit trouble resulting in garbled information.

"Packet" data networking has many and varied forms in the commercial
world. Perhaps the most-written-up form is ALOHA. It is in literature
of the electronics communications industry and Transactions of IEEE
Communications Society.

>Back then the power limit was different, repeater rules were very different,
>and the 30, 17 or 12 meter bands weren't even a distant dream. The technology
>used in most ham rigs was also very different.

"Repeaters" came into being around 1940 in the US military. They
were known as "radio relay" then and for several decades afterwards.
The AN/PRC-6 handheld transceiver (VHF, internal battery power,
debuted during the Korean War) was DESIGNED to work with
another PRC-6 using a specific adapter cable for unattended repeater
operation. So too were the PRC-9 series of manpack transceivers,
all designed for easy set-up in pairs as unattended repeaters. The
AN/TRC-1 through AN/TRC-8 group of radio relay terminals was
specifically designed for unattended operation and were used in
Europe during WW2. "Repeaters" are certainly nothing new in
technology nor are they of amateur radio origin.

>And the tests we took back then had lots of things in them that are no longer
>in the current tests. Neutralization of triode RF power amplifiers, for
>example.....

I was successfully operating high-power vacuum tube amplifiers in HF
communications WITHOUT being formally tested and WITHOUT any

formal training in high-power HF transmitters at ADA. On-the-job
verbal instructions sufficed, taking less than a day for explanations
and individual run-through of procedure. The workhorse transmitter
at ADA in the 1950s was the BC-339, 1 KW RF output using a
pair of 833 triodes in the final amplifier. Yes, "neutralization" was
required to be observed on the 339 and all the others. Not a problem.
Not a "test subject" nor were there any "legal requirements."

Since those days long ago, I was given job responsibility to DESIGN
and prototype RF power amplifiers and power sources WITHOUT
any formal testing and WITHOUT any specific formal schooling in
such techniques. At the same time, I was REQUIRED to obey the
current laws on RF emission technical standards for the particular
radio application. Solid-state technology and techniques can be
remarkably DIFFERENT from vacuum tube technology and
techniques.

>In the intervening years, FCC has trusted me (and almost every other ham from
>those days who hasn't lost interest) to keep current with amateur radio.

Try reviewing FCC regulations a bit closer, senior. FCC REQUIRES
you (and all others) to emit RF WITHIN technical regulations. That
INCLUDES whatever has become "current" resulting from changes
since an operator was licensed.

REQUIREMENT. BY LAW. Enforced by United States peace officers,
trial and imprisonment possible.

>FCC
>has renewed almost all of our licenses without question, and we're allowed to
>use those new modes and technologies even though we've never passed any tests
>on them.

Lucky you. Now, what was your point (if any)?

>If FCC trusts us OTs to learn as we go, why not the new folks?

FCC "trusts" (actually entrusts) the VEC QPC to come up with
questions and answers for the amateur radio license tests. Those
tests apply to ALL ages.

I'll challenge ANY of the old-timers to "learn as they go." That's
what I've done, successfully, during my whole career in radio
and electronics. Some of those same old-timers are still anal
retentive on retention of a morse code test in a radio service
that is basically an avocational and recreational activity. I'd say
those anal retentive old-timers are resisting learning because
they CANNOT learn as they go.

>
>Excellent comments. Thanks for taking the time to file.

Larry, it's interesting to see the "mix" of RMs. Seven essentially for
the elimination of the code test, seven essentially for its retention.
I observe some deliberate picking of what to make into a released
RM on some curious "equal-sized-teams" contest.

What the public does NOT get a chance to see easily is how many
petitions for change actually arrived at the FCC. All the public can
see is what is officially selected for issuance. It's difficult to find out
what RMs exist unless there is an ex officio communications means
elsewhere to let everyone know.

The FCC is attempting to be fair in the "7 versus 7" in my opinion.
All are, or were, open for Comment. Comments on 98-143 are still
open for Internet access even though those comments were supposed
to cease on 15 January 1999. :-) Been about a half thousand
comments on 98-143 _since_ official closure.

One thing for sure: The FCC now has a quick and easy procedure
for Comment upload from either "manual" entry (on-line) or via
prepared documents in five file formats. That's a good thing for all.
Making sensible/logical commentary is quite another thing... :-)

Memory says that Schlumberger acquired them first, then Zenith.
The Heath-Zenith home appliance/gadget corporate headquarters
moved to someplace else (southeast?) according to what I
remember from the doorbell packages. Zenith quit the TV receiver
manufacture some time ago; they were a close second to
Admiral Corporation, also in the Chicago area.

>>My first kit was a Heath Q-1.

Mine also, 1951. The CRT in the kit was WW2 surplus, 5BP1,
container still marked with Army lettering. :-)

> My first Heathkit was their VTVM (Vacuum-Tube Voltmeter for those
> who never played with one). One of the best test instruments of its
> time (1950s).

It's still good. My Heath VTVM was purchased in late 1953, shipped
to my battalion mailbox in Tokyo, Japan, while assigned to ADA.
Used it for checking "Hi-Fi" music electronic kits purchased at the
legendary Akihabara district of Tokyo, even then a mecca for
electronics-radios-components covering many square blocks. Mine
traveled with me back to Illinois then California. Slight drift in the
resistor values makes it a tad out of spec now and the rotary switches
will probably never survive another cleaning (oxide build-up on the
rotary contacts has always been a problem with old electronics).
The Heath SB-310 receiver kit, purchased and built two decades
later, has almost useless rotary switch contacts now.

Carl, you deserve a bigger hand for helping the changes at WRC-03
regardless of the few ARRL actually involved with Working Group 6
at the FCC. The minutes of those meetings, terribly late in coming,
are on public view.

I would suppose that ARRL executive-president-for-life Dave Sumner
did help change S25 in Geneva. From his reportings to the IARU
website - NOT the ARRL web pages - he was NOT expressing any
enthusiasm for changing S25 nor showing much bias for either side.

It is also evidenciary that IARU policy on code testing had ALREADY
shifted to no code test in 2002, almost a year before WRC-03. ARRL
public policy statements took a neutral stance, supporting only
obediance to federal regulations whatever they would become. That's
a clear case of division of opinion within the ARRL upper echelons...
the public (and membership) is shielded from internal divisions by the
public stance of "neutrality" on code testing.

Any sign of internal division in a membership organization (a minority
group considering all the licensed amateurs NOT members) shows
that ARRL cannot reach any consensus itself! It would then be
useless to use any neutral ARRL public policy statement to show a
"consensus" opinion on "representation of US amateur opinion."

The rest of the radio world goes on advancing to the future. ARRL
leadership seems firmly rooted to the past, trying to regain the glory
of the executives' and BoD' youth long past.

The Emmaus test site video (test area #3) should be pretty representative
of the "main.net" system ... test area #4 is the Amperion OFDM system.
There could be others that might have different "signatures" ...

> I expect that if it was indeed BPL RFI it would follow the power grid

> with distance away from the lines. But from the one report posted here

> of a ham who said he heard it from a distance of 60 miles, seems like
> propagation will play into the picture-to be expected at HF as all
> experienced HF ham operators know. Or maybe *he* mis-identified it!

I suspect that may be the case ... though it's not impossible that under ideal conditions of terrain, propagation, with good antenna, etc. that it *might* be detectable at some distance ... whether current levels of deployment would cause truly "harmful interference" at such a distance requires further study.

> So who do hams call for assistance, the ARRL? I haven't seen anything
> from them suggesting that.

My recommendation would be to e-mail a .wav file or other common audio file format to Ed Hare, w1rfi@arrl.org, and give him the particulars of time, location, if you *know* that your utility is doing a BPL trial, etc.
(I'd appreciate a cc: of the audio file and particulars to my main e-mail address wk3c@wk3c.com as well, just for my own information and analysis.)

The MAIN thing is to NOT have a bunch of false "BPL interference complaints."
The BPL industry is trying to paint the ARS as "exaggerating the potential for
interference" and doing a lot of hand-waving ... inaccurate claims of "BPL interference" at this point will do more harm than good.

Dave,

The ARRL video is not in the "members only" part of the site ...
it's easy to find from the articles on BPL in the public area.

Even though the testing for code was reduced to the basic 5 WPM over three years ago, it's obvious that the debate still rages on.

The insistance that a person know Morse Code at a resonable speed in order to be "real ham" is similar to religious fanatics, particualrly Christian fundamentalists, who think that a person has to believe in god in order to be a good and moral person. They cannot prove that their god even exists. So with the PCTA, they cannot prove that code is useful in light of communications advancements that have been made over the past several decades.

Just as certain fundamentalists would like to turn the country into a Judeo-Christian theocracy, so would certain hams go back to an outdated communications scheme, simply because they think that Morse code is their "god."

To expect prospective hams to believe in the fairy tale of morse code is the the same as expecting people to believe in the fairy tales of the holy bible.

By my best recollection there have been *maybe* about 6 or 7 who have
upgraded, decided "I've got mine." and decided they wanted to keep the
5 wpm ... out of thousands of NCI members.

I wonder how many lifetime subscribers this will affect?

If I'm remembering right, fairly early on Wayne sold them, and they
were $37. In 1973, he sold them for $73. I think he continued to
sell them for some time after that; I have a recollection of a $150
life time subscription, but that's a more vague memory.

Were the lifetime subscriptions honored for all that time? How many
of them abandoned the magazine. explicitly telling 73 they didn't
want anymore issues, or just not providing a new address when moving?
How many who did buy a lifetime subscription were still alive by this
month?

>
> Remember the old adage "honey is better than vinegar."

OK, fine, your opinion is well stated.

Now consider that same logic applied to the written test.

It could be asserted with equal logic that being forced to learn
theory and other subjects a ham is not interested in just to gain
access to amateur radio
"soured" more people on radio theory than it encouraged ... of course,
some percentage of folks decided they liked aspects of amateur radio
that they had not considered or known about before, but MANY simply
endured something they had no interest in to get past the test, then
"threw away the Handbook"

This isn't a straw argument. I've known hams who sold off their study
materials as soon as they passed the *written* tests.

Now some folks will say "But the writtens support the basis and
purpose of amateur radio as a technical service - there's even an ITU
recommendation" - etc. And of course all hams do need to know the
applicable regulations, safety and operating practices, so of course

the written test cannot be completely eliminated.

But has the existence of several tiers of written testing actually made hams "more technical"? Does being tested on how to compute complex impedances and Thevenin equivalents make a ham more likely to build equipment, experiment with new modes, participate in public service communication, be a VE and/or Elmer, and be a more friendly, helpful amateur? Does such testing make a ham less likely to commit rules violations?

From 1953 to 1968, US amateur radio had only two *effective* written tests - the Novice and the General/Conditional/Technician. Yes, the Extra existed, but it was a "prestige" license only, which granted no additional operating privileges at all. The 20 question Novice got new hams started, and the ~50 question General took care of the rest.

The reintroduction of "incentive licensing" in late 1968 was supposed to push hams to be "more technical" by requiring two more written tests beyond the General in order to get full privileges. But did that result happen?

Some might cite the 20 wpm code test for Extra, but in fact the most gain in privileges was made by upgrading to Advanced, which required no additional code test.

After 1990 (13 years ago), medical waivers allowed those with problems learning code past 5 wpm to get any class of amateur license on the basis of the 5 wpm code test alone. And since restructuring, we're down to just one additional written test beyond General for full privileges.

Has any of that made US hams or ham radio in the US "more technical" in the past 35 years? Or just the opposite? Does *forcing* someone to learn a little bit about radio theory make them want to build radios?

Hans, K0HB, has proposed a 2 level system that would be very similar to the old "pre-incentive" system. One easy test for newbies and a full privs test for everybody else. And like the old system, the newcomer license would not be renewable, so upgrading would effectively be *required*.

At first I though it was a "looney-tune" idea (to use Hans' phrase), but now I'm not so sure. Perhaps he is on to something.

FCC effectively reduced the number of written testing levels from 5 to 3 back in 2000. NCVEC is beginning to make noises that the Tech test is "too hard", and they also note that their "dump Element 1" petition is only a first step. Also, a look at the AH0A database shows a severe drop in new Techs since the new Tech Q&A pool was effective in mid-July.

If someone says we need less *written* testing and an *easier* entry level test (with suitably reduced privs), how can they be refuted?

If someone says "The only reason you Extras want people to have to pass all these *written* tests is because *you* had to!" - how can they be refuted?

How can Hans' proposal be refuted? There's nothing in the theory part of the Extra written that is required knowledge for the safe and legal operation of an amateur station on any authorized band or mode. And much of the regs in both the General and Extra exam are about what an Extra can do that a General can't.

Quite a number of hams today think that "incentive licensing" was a mistake. Quite a number of hams today think that the 1953-1968 era was a "golden age" that was ruined by the class divisions and forced learning/testing of incentive licensing.

Some people learn theory very easily, while for others it's a difficult process. People who would make excellent hams but who aren't good with numbers, science, and/or memorization of things like band edges may be being kept out, or kept from full access, by the *written* testing.

> > In the absence of a code testing requirement, there will be progressively
> > fewer hams who have never been exposed to learning the code as a
> > result of the requirement. Since the requirement was the principle
> > motivation to learn the code, code use *will* decline once code testing
> > is abolished. Therefore, testing and use are two closely interrelated
> > concepts.

Would anyone accept this argument, particlularly looking back over the past 35 years?:

'In the absence of multiple levels of theory testing, there will be progressively fewer hams who have been exposed to learning theory as a result of the tests. Since the test requirement was the principle motivation to learn the theory, the technical level of hams themselves and of amateur radio in general *will* decline. Therefore, testing and technical know-how are two closely interrelated concepts.'

Or how about this rebuttal:

Those who want technical knowhow in amateur radio are either unwilling to expend
the effort to (or incapable of *politely*) encourage people to "give the
theory a try and see if you like it." And, they are apparently unwilling to
take "No thanks, not interested" for an answer. Thus, they continue to
seek to have the FCC mandate an arguably counter-productive "recruiting
program" for them ...

--

Which approach is more effective for getting hams interested in technical subjects - the "honey" of demonstrations and examples, or the "vinegar" of forced testing beyond the minimum necessary for safe and legal operation of an amateur station?

But Noooooo, you all said Restructuring and the no-code tech license were good ideas. Why will new hams and upgrades buy a radio magazine to increase their knowledge and radio skill? They won't! They don't care about ham radio. They want to stay stupid! Having a ham license doesn't mean anything to them because they didn't have to put in any effort to get it. It was handed to them.

HA. The ARRL plan to support dumbing down ham radio is going to back-fire on them. Heee Heee. They put free licenses in people hands but those people aren't buying memberships. QST will be going the way of 73! HA. Hiram Maxim is turning over in his grave.

"Persistent demeaning language against morse code?!?"

That's quite biased, if not bigotted. If code-lovers want to be "in your face" about their alleged "superiority in radio" for that singular ability, and do so for years, and years before the Internet went public in 1991, then I think your language use is both biased and quite "loaded."

The PCTA constantly want to equate elimination of the code test with elimination of morse code as a mode. That shows two things: unjustified paranoia by code-lovers; a necessity to claim an old psychomotor skill in order to get them artificial status, rank, and privilege in amateur radio.

Since NO OTHER RADIO SERVICE involved in communications has retained morse codings as a primary mode of communications interchange, long-time radio amateurs desiring retention of a code test can only be seen in the light of demands that "others do as they did" to love, honor, and obey morse code in order to have them retain their rank, status, and privileges.

If a relatively small group of biased and bigotted old-timers insist that elimination of a federal TEST for morse code ability is "persistent demeaning language" in an open forum, publicly accessible, then there isn't much hope of "consensus" among the whole and certainly not conciliation.

There is only the capitulation of the majority to a minority's desire to accept "persistent demeaning language" as truth.

That is a selfish demand by those no longer "superior."

>hairs, isn't it? I'm asking--I wasn't around for spark ;)

The ONLY way a "spark" transmitter could send anything called
communications information was by on-off keying.

Since "morse code" was already in practice and was totally
on-off keying, it was adopted as The "radio code."

The adoption of a long-existing (since 1844) LANDLINE code
says absolutely nothing about its efficacy in radio communications,
ability to "work through" or much else. On-off keying was
adopted simply because it was the ONLY WAY POSSIBLE for
early, primitive radio to allow communications. It's just
practical applied physics. Nothing else.

Doesn't settle your question, I know, but then I've not been shy
about making a particular subject point... :-)

Some of them have been found using as much as 9 kHz of the band.

> lead to FCC rule changes.

In part because of the time of day it was being done, and the
crowdedness of the band at the time.

But the main point was that transmitting audio frequencies above those
considered "communications quality" was "poor amateur operating
practice".

IIRC, anyway.
>
> Now mind you, this "mode" uses less space than an AM signal conveying

> logical, however <grin>.)

Excellent point! Indeed, spark was abandoned and eventually outlawed
in large part for being spectrum inefficient.

AM has repeatedly come under fire for the same reason. Besides the
additional spectrum used, there's also the heterodynes.
>
> So back to your "Why would anyone want to have a mode banned?"

> facts?

Another excellent point.

Perhaps they see a greater chance of success against a few stations
running "single wideband" than against the many who run AM.

Or perhaps they want to set a precedent. If they can get "single
wideband" banned for the "bad practice" of using more spectrum than
necessary....

AM defenders will say "But it's *not* the "same information" because
AM (DSB-with-carrier) quality is inherently better than SSB
(one-sideband-and-no-carrier) quality. But will that fly with FCC?
>

Wayne has always been a "rebel" from way back to the beginning of RTTY vs the FCC. Along with some of the pioneers of RTTY, Boyd Phelps, W0BP, Byron Kretzman, W2JTP, Merrill Swan, W6AEE and a few others. Those amateurs convinced the FCC to allow FSK keying instead of "make and break keying". Wayne got his writing start with CQ magazine as W2NSD's "Amateur Teletype" bi monthly column or before with a small RTTY newsletter in Cleveland, OH? Then on to assistant editor or editor of CQ magazine before breaking away and the creation of 73 magazine.

In 73's heyday the magazine was twice as thick as QST, with just about every ham related company or store advertising in the magazine. Some of the articles and columns were very informative. The "April fools" issue was really a great innovation for it's time. The one I remember the most was the burial of a dipole underground and the signal therefore would be "inverted" on the transmit end and one also needed a buried dipole to receive the "inverted" wave.

He exposed a ham store in the suburbs of Chicago called "Trigger Electronics" The store advertised the purchase of your "used gear", When the received check bounced at the banks from Trigger then hams wrote to Wayne and he personally looked into the store and it's business practices. Put "Trigger" out of business by exposure in 73 magazine editorials.

The magazine promoted two meter FM repeaters, maybe even lobbying for the hams before the FCC to relax the rules some for repeater operation?

I was behind Wayne at a Hamfest in the coffee and doughnut line where he was the featured speaker, he mumbled something about the price of the doughnuts and that they were to small for the price, but he took one anyway.

I heard in the later years that Wayne required a certain format for articles or columns and if the author did not follow the format, then the article or column did not get published.

Think a lot of the advertisers were leery of Wayne when he attacked the ARRL so often in the editorials and they dropped out in fear of QST removal of their advertisements in that magazine.

Somewhere along the way, Wayne got off on the wrong tangent and destroyed a good technical magazine.

So not all is bad about W2NSD, he has contributed to the amateur radio in ways that are behind the scenes.

Thanks Wayne for the "good years" when 73 was great.

Don't know about BPL, but VDSL goes from 138KHz to 12MHz and has 4096 tones. Not as much potential for a problem, as it's all twisted pair rather than power lines.

and that's why it's only a matter of time before the code testing is gone.
The PCTA crowd doesn't help itself much when it presents itself with
such an air of arrogance and aggressiveness. One ham in here actually
expressed an interest in having special new call signs issued to the new
hams that upgrade without the code test when it's dropped from the
testing requirements so "the old ham crowd will know who *not* to
talk to"... now, just what do you think the new hams are going to think
of this kind of behavior? it's not a wonder at all that the PCTA side
of the issue is losing.

Just a *bit* of a stretch of logic there... I think you pro-code test types are having to dig as deep into the soot and dirt to come up with argument points now. It's a little difficult to believe that just a lack of interest in having a morse code profeciency test is to blame for a magazine not cutting it in a capitalist system.... they mentioned "a reason of economics".. ever thought that maybe it's just another product who's time has come and gone? Did you really think that the model-T would last forever and never be taken out of production?

Clint

Justify requireing a knowledge or profeciency test on using an old fashioned
buggy whip before giving out an modern day automobile driver's license.

True.

Now explain why hams know how to use "other modes" when there isn't
a profeciency test to MAKE them do it in the first place.

I one I love was the "MAD Magazine" issue. The cover had ol Alfred E. Newman soldering a radio chassis with a big 300 watt soldering gun saying "What, me solder?" Inside the issue was "Ham versus Ham" comic strip which was a parody of "Spy Versus Spy". That whole issue had me in stitches for days.

QST used to be fun as well. Compare this month's issue from any one during the 40's, 50's, 60's and 70's.

The 80's and solid state electronics changed things.

Reading QST now is about as much fun as going to the dentist.

Hmmm, wouldn't Part 5 of Title 47 be the governing body for this? And, in
Part 5, there is the following:

PART 5--EXPERIMENTAL RADIO SERVICE (OTHER THAN BROADCAST)--Table of Contents
Subpart B--Applications and Licenses
Sec. 5.77 Change in equipment and emission characteristics.
(a) A change may be made in a licensed transmitter without specific
authorization from the Commission provided that the change does not
result in operations inconsistent with any term of the outstanding
authorization for the station involved.

Along with the above, this section goes on to define certain emission
standards, etc. I was just now trying to find the spec on emission
standards (rules?) as they apply to bandwidth. Correct me if I'm wrong--the
topic and rules of experimentation are way outta my league...no pun
intended. Would the above pertain to experimentation in the amateur bands?

By the way, someone might want to clue these folks in to the Clear Speech
speaker. I bought one for my darlin' a few Father's Days ago and--hey--it
is amazing!

Well, at least more bandwidth than those complaining want to allow, right?
I mean, the topic of bandwidth, or any rule that says "as necessary" is
pretty arbitrary, vague at worst.

Gosh. That's a loaded question with lots of possiblities, including those
related to the culure and tradition of ham radio. Maybe folks feel better
about "attacking" something new than they do about "attacking" time-honored
traditions in ham radio? Then, there's what you said. Then, there's
personal differences.

>
> Now look at the persistent demeaning language here against Morse code

Absolutely true. I can understand why there would be the expectation of a
CW ban being petitioned for. And, I would even fully expect one to

surface--even soon. BUT, I really never thought that the FCC would entertain the idea to any end where the actual ban would take place. I would be so compelled on this issue that I would actually file a comment on it. And, I haven't been stirred by much to actually follow-through with a comment.

Well, I agree that it may be on some peoples' agenda. But, I sure do hope the FCC wouldn't authorize such a thing.

While that's true, there were other types of transmitters on the air even before WW1. Arc transmitters and Alexanderson alternators were two types. Transmitters using tubes were in use well before 1920.

The practical transmission of voice and music by radio was demonstrated as early as 1906.

> Since "morse code" was already in practice and was totally

Actually, the code used in radio is different than the code used in landline work.

The efficacy of Morse code when applied to radio has been demonstrated many, many times over the past century-plus. Radio amateurs continue to demonstrate it every day.

> On-off keying was
> adopted simply because it was the ONLY WAY POSSIBLE for

And it works very well.

Even after the invention of other methods of transmission, the use of Morse code continued.

Sorry, that cannot "be asserted with equal logic."

First of all, that analogy is reduced to the absurd.

Amateur radio IS involved with electronics technology and ALL
radio amateurs are responsible for their amateur stations'
technical requirements. Ergo, the regulatory tool of licensing
MUST concern itself with radio-electronics technical knowledge
to prove competency and responsibility to the Commission.

Radio-electronics technical cognizance is NOT on any trial.
What IS on trial is a test for one MODE of transmission, on-off
keying morse code.

>This isn't a straw argument. I've known hams who sold off their study
>materials as soon as they passed the *written* tests.

Irrelevant as to the subject of retention or elimination of the code
test for an amateur radio license.

>Now some folks will say "But the writtens support the basis and

>hams started, and the ~50 question General took care of the rest.

1953 to 1968 was 50 to 35 years ago. Approximately 2 generations.

>The reintroduction of "incentive licensing" in late 1968 was supposed
>to push hams to be "more technical" by requiring two more written
>tests beyond the General in order to get full privileges. But did that
>result happen?

It was quite obvious to all that "incentive licensing" was really all
about gaining status, rank, privileges in an avocational, recreative
activity. THAT part of "incentive licensing" DID happen. It also
boosted the already-growing class distinction artificiality in U. S.
amateur radio.

>Some might cite the 20 wpm code test for Extra, but in fact the most
>gain in privileges was made by upgrading to Advanced, which required

>no additional code test.

Incomplete summation or example.

>After 1990 (13 years ago), medical waivers allowed those with problems
>learning code past 5 wpm to get any class of amateur license on the
>basis of the 5 wpm code test alone. And since restructuring, we're
>down to just one additional written test beyond General for full
>privileges.
>
>Has any of that made US hams or ham radio in the US "more technical"
>in the past 35 years? Or just the opposite? Does *forcing* someone to
>learn a little bit about radio theory make them want to build radios?

Did it or didn't it? Are you making a speech or are you posing as
a lecturer at some seminar involving avocations?

Nothing in current or past FCC regulations REQUIRES "building
radios." The Commission allows the OPTION of doing so while
nearly all other radio services require type-accepted radio
transmitters.

The Commission is NOT REQUIRED to be supportive or booster
of any particular past or present-day specific activity or mode.

The Commission's ONLY lawful actions are to regulate ALL U.S.
civil radio and interstate electronic communications as well as to
mitigate interference matters.

>Hans, K0HB, has proposed a 2 level system that would be very similar
>to the old "pre-incentive" system. One easy test for newbies and a
>full privs test for everybody else. And like the old system, the
>newcomer license would not be renewable, so upgrading would
>effectively be *required*.

If Hans kohb's proposal/petition is before the Commission, then ALL
are free to comment on it THERE.

>At first I though it was a "looney-tune" idea (to use Hans' phrase),
>but now I'm not so sure. Perhaps he is on to something.
>
>FCC effectively reduced the number of written testing levels from 5 to
>3 back in 2000. NCVEC is beginning to make noises that the Tech test
>is "too hard", and they also note that their "dump Element 1" petition
>is only a first step. Also, a look at the AH0A database shows a severe
>drop in new Techs since the new Tech Q&A pool was effective in
>mid-July.

If you wish "looney tunes" entertainment, then try to read RM-10808
seriously. It is proposed by none other than AH0A.

"Beginning to make noises" is a subjective observation of yours.

If you wish to have a written amateur test element set with more
difficulty, you are absolutely free to submit your proposal to the
Commission, have them issue an RM, and then cry in public
newsgroups later because your proposal does not meet enough
acceptance.

>If someone says we need less *written* testing and an *easier* entry
>level test (with suitably reduced privs), how can they be refuted?

Just say NO...and with some supporting evidence. That is what
the FCC Electronic Comment Filing System is for, senior.

>If someone says "The only reason you Extras want people to have to
>pass all these *written* tests is because *you* had to!" - how can
>they be refuted?

The same as above.

>How can Hans' proposal be refuted? There's nothing in the theory part
>of the Extra written that is required knowledge for the safe and legal
>operation of an amateur station on any authorized band or mode. And
>much of the regs in both the General and Extra exam are about what an
>Extra can do that a General can't.

What IS your problem, senior?

Do you NEED rank, status, privilege in a hobby activity to "prove"
yourself to the rest of the world?

>Quite a number of hams today think that "incentive licensing" was a
>mistake. Quite a number of hams today think that the 1953-1968 era was
>a "golden age" that was ruined by the class divisions and forced
>learning/testing of incentive licensing.
>
>Some people learn theory very easily, while for others it's a
>difficult process.

Theory is not for everyone.

>People who would make excellent hams but who aren't
>good with numbers, science, and/or memorization of things like band
>edges may be being kept out, or kept from full access, by the
>*written* testing.

Define "excellent hams" in terms other than your own standards
OR the emotionally-laden phraseology from Newington.

Amateur radio is an avocation, a recreational activity involving radio not
done for pecuniary reasons. There are NO federal regulations specifying
particular mindsets, imaginary group patriotism, or oaths of fealty to
certain organizations.

>> > In the absence of a code testing requirement, there will be progressively
>> > fewer hams who have never been exposed to learning the code as a
>> > result of the requirement. Since the requirement was the principle

>> > motivation to learn the code, code use *will* decline once code testing
>> > is abolished. Therefore, testing and use are two closely interrelated
>> > concepts.
>
>Would anyone accept this argument, particlularly looking back over the
>past 35 years?:

Why do you ask? Get to the point, senior.

>'In the absence of multiple levels of theory testing, there will be
>progressively fewer hams who have been exposed to learning theory as a
>result of the tests.

Unproven subjective supposition.

Radio transmission IS a technological activity. The Commission does
NOT require any sort of high level of theoretical knowledge...and they
do NOT require a large number of questions on theory on any written
test. In fact, the Commission DOES NOT SPECIFY THE NUMBER
OF SPECIFIC QUESTION SUBJECTS on the written test.

>Since the test requirement was the principle
>motivation to learn the theory, the technical level of hams themselves
>and of amateur radio in general *will* decline. Therefore, testing
>and technical know-how are two closely interrelated concepts.'

Irrelevant and illogical. There is NO periodic "re-testing" for any
amateur radio license class. Pass it ONCE and it does not have
to be taken unless the decade-long renewal period has past.

You have NOT proved any "close interrelationships" since that is
not a subject, is not currently done, nor is it anything from "noises."

>Which approach is more effective for getting hams interested in
>technical subjects - the "honey" of demonstrations and examples, or
>the "vinegar" of forced testing beyond the minimum necessary for safe
>and legal operation of an amateur station?

It is not a requirement or function of the Commission to take on a
role of encouragement in anything but legal compliance with
regulations insofar as amateur radio is concerned.

The thread subject contains the words "Code Test." Try to stay
somewhat closer than a geosynchronous orbit distance from it.

Try concentrating on "Code Test" instead of misdirecting into far-field
irrelevant subjects.

There's no mistaking the BPL signals in the Emmaus test area which are
SS although there's some discussion on that point. I didn't know what
to look for on my first pass through Emmaus and found all sorts of
crud particularly in the extensive commercial area. But I found a very
odd-sounding strong clicking noise in the area around the Emmaus High
School and reported it to Carl and Ed Hare who then told me the stuff
sounds like geiger-counter clicks. So I'd nailed it out of the chute
with just my little TS-50 HF mobile xcvr and a 2M magmaount whip. I've
probably heard every form of QRN/QRM out there by now and there is
no mistaking the BPL in use in Emmaus. The stuff grabs yer AGC and
it's all over.

The ARRL audio tracks and files don't do it justice, the spikes it
kicks out are too sharp and short to be captured properly with the
consumer-level digital recording/playback equipment used to generate

the recordings. OFDM is another form of the beast which I haven't
personally tuned on-site yet but the ARRL recordings ought to give you
the drift.

1024. A New Concept: Virtual Spectrum

Newsgroup: rec.radio.amateur.policy
Date: 2003-10-14 01:27:32 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <3F8B4D6D.31D19695@ix.netcom.com>
Source record: 80600

Thanks for reading this.
I have today submitted an article to QST magazine entitled
"Virtual Spectrum: Beating BPL at its own game,"
detailing a concept that can greatly impact our radio hobby.
I wanted to "put down a marker" to date the introduction
of a new ham-radio innovation, and to officially place
the idea in the public domain, so the maximum amount of
"tinkering" with it can happen.

This concept uses the bandwidth available on the Internet
and some simple circuitry to create a replica of a segment of
the radio spectrum, stream it live or prerecorded to another
internet-connected computer and reconstruct that radio spectrum
at your location. *Any* radio equipment you wish to use
(given an Internet connection with sufficent bandwidth)-
from modern PSK-31 rigs, SSB nets, WW-II modulated oscillators
all the way back to ancient spark transmitters
with crystal receivers; all can legally communicate just as though
you were on-the-air. The system is bi-directional, allowing
QSOs between stations that normally could not communicate.
If you can't hear weak signals because of noise in your area,
the concept allows you to build a "remote front end" and
transport the radio spectrum in a quiet area right to your rig,
bypassing the problems in your location.

I believe this concept can be the answer to BPL, "noise holes,"
antenna restrictions, HF "jammers" and many other obstacles to
using our radios. There is great potential for many uses,
and a possible niche market for someone with the resources
to develop the equipment.
I have already built prototype equipment to prove the concept
and it works splendidly. The article includes construction
details. The circuits are simple and you can get
95% of the parts at Radio Shack.
By the time QST publishes (assume they accept the work),
we should have completed the first Virtual Spectrum QSO:
two World War 2 BC-611 handie-talkies (output: about 60 milliwatts)
will communicate over a path of about 2000 miles.

If QST does not publish the concept,
I will publish it myself on the web
immediatly after hearing from them.
I am indebted to Mike Hanz, aafradio@cox.net

for invaluable suggestions and encouragement.

Common sense. Ever since the initial discussion of
nocode, every time any actual survey has been done the
results have been less in favor of keeping code. I
sincerly doubt that shift has stopped. Can I prove it? No,
but I'm confident that's were it is going.

True, but many probably didn't. In the end, it makes no
difference.

I fucking hate to follow up a non-ham-radio posting on a fucking ham radio newsgroup, but (groups trimmed) this really fucking *is* about ham radio. I use that particular word in casual conversation more often than I did 20 years ago. I do, however, keep it G-rated on the air, by personal fucking preference.

I don't think I ever use that word to "describe sexual or excretory organs and activities". There are actually much better words for that, and in fact, many of them are patently non-offensive.

"Come" is a good example. "Blow" is another. "Dick" is a man's name. My grandmother, for example, uses those words in a non-offensive context all the time.

The only time she says "fuck" is when the woman next to her yells "BINGO".

Good question, but it has been some 40+ years since SSB
pretty much took over as the HF mode...and there's still no
call for any ban of AM.

Not if such DSB AM was in any way a significant percentage
of use on the air. That sure doesn't seem to be the case at
all, however.

He offered a lifetime subscription to Byte and later, to Kilobaud for
$150. I paid the $150 for Byte. After it was sold, I was notified my
subscription had expired. I sent a photo copy of the canceled check,
marked, "Lifetime subscription." They sent them for another year, then
pulled the same stunt, and refused to honor the contract. I have never
bought anything from the publisher, since they screwed me.

>
>
> That's an adverb, not an adjective.

Actually, "brilliant" is the direct object of the sentence, which by definition, is a noun, so that particular modifier is an adjective, and not an adverb. "This" is the subject, "is" is the verb, 3PS of "to be", and the sentence is actually not grammatically correct, so there are some problems deciding what part each word performs, or the fucking intent. When you have an illiterate moron musician trying to speak the King's English, you get "This is really, really, fucking brilliant." What the fuck does that mean? Is there, perchance, a light in his eyes that makes him unable to read the fucking teleprompter?

If he were to have said "This is really, really fucking brilliantly done", then 'fucking' would have been modifying an adverb, which still makes it an adjective. The only other uses of "fucking" would be either present participle ("Bubba is fucking his new cellmate"), or gerund (a noun formed from a verb, such as "I enjoy fucking", or maybe the classic failed Minnie Mouse insanity defense, during their divorce proceeding, where Mickey tells the Judge that Minnie is "fucking Goofy."

Yet no one has apparently made that pitch, and no
one is petitioning to end written tests either. Bottom
line, the requirement for some technical knowledge is
coupled to the freedom ALL US hams have to build,
modify and/or repair their own equipment...even if they
never want to. The knowledge is expected to help
hams stay within tolerences and signal characteristics
allowed because failing to do so can/will lead to
interference. Morse knowledge, on the other hand,
has no potential for harming others, causing interference,
etc.

Jim,

If/when someone floats an RM to end written testing, then
I'll be one of the first in opposition. For today, the code test
is not, IMHO, in any way comparable. We'll just have to
agree to disagree on that because I ain't gonna waste any more
time arguing hypotheticals when those arguments aren't
even being made to the FCC.

Cheers,
Bill K2UNK

Are you talking about a souped up version of Echo Link?

Why would any of this be needed, if you can just chat with each other via
AIM or some other chat program ?

I didn't buy my radios and build my stations so I could
let them gather dust while I "chat" on the internet.
I want *use* them.

I recall back in the early 70s how excited I was about the future of ham radio via satellite and how I expected to see a flood of activity (that never materilaized) to take us through the bad sunspot years.
Dave, maybe hooking up all those BAs thru transverters will be a better answer.
:-)

And to emphasize the point, old BA stuff that was, 20 years ago, routinely hauled to the landfill, is once again going for REAL money.

I know a ham-nee-CBer who told me he once hauled a good Globe King 500 to the landfill, much to his later chagrin....I had one that brought $1550 and would have brought more, they were lined up wanting it, but I learned that a friend had been looking for one, and I sold it to him.

"Wireless" doesn't always work, if you're in a "noise hole,"
or if the mode or radio you want to use isn't "legit" anymore.
So that's one use, yes.
The idea is to use our own radios as source and sink,
bypassing the vagaries of Mother Nature's propagation
and local noise sources. Or, if you're in a "noise hole,"
to bring spectrum to you from a "quiet" location.
It also allows the use of heretofore prohibitied modes.
For instance:
In the article I detail how an old longwave maritime
rig on 415 KC A2 can carry on a real-time CW QSO with
someone using a modern rig on 40 meters.
It will be a real boon for the "boatanchor" community.
I do hope QST will consider it.

IIRC, the subscription form in the mag for some time used to say
"Lifetime (ours or yours)".

The magazine cover parodies were always fun, the Playboy and QST's
particularly memorable.

Sadly, most of my 73 (and HR) collection got turned to mush in a
basement flood a few years back; still have a few of each.

I'm expecting that Wayne will be appearing on Art Bell some weekend soon
to Explain It All.

Just what would this internet communicating have to do with Ham Radio ?

Again, why would you need the ham equipment , considering you can do all the communicating to begin with just by being on the internet?

Not to be personally offensive (I mean it), but this sounds rather silly to me.

Ham Radio is communication over the airwaves using ham gear. Websurfing is connecting to other pc's and servers etc using the telephone line or cable, and the internet.

They both are FUN but they ain't the SAME !!

Of course it's a stretch, Clint. That's all some have left at this point. In reality, the magazine "73" has never obtained great success in the marketplace, which means advertising revenue has always been lower than the other magazines. At the same time, printing and other costs are going up, making it much more difficult for smaller publications to stay in business. This same thing is happening throughout the publishing industry. Lower advertising revenue, combined with rising costs, is putting many smaller magazines out of business. Knowing that, it shouldn't surprise anyone when the same thing happens to the ham radio publications.

>who's time has come and gone? Did you really think that the model-T
>would last forever and never be taken out of production?

Nobody in here seems to understand that independent periodicals
make their living almost ENTIRELY from sales of advertising space.
Fact of publishing life for nearly every "popular" or newsstand
sold periodical.

Advertising is not free. It is paid for and such payment has to be
budgeted by every advertiser. Advertising budgets can only exist
where there is income from product or service sales to warrant
paying for advertising.

If a goods manufacturer has a product line covering two or more
like markets, the manufacturer has to decide which market will be
the most profitable in the near future, which has more potential, and
how will they be affected by competition in those market areas.
Advertising budgets and money are NOT boundless.

ALL of the amateur radio oriented periodicals on the American
newsstand market have expressed concern about "lack of advertising
income" in the last two years. Even QST which is backed up by the
dozen-million dollar reported IRS income of the League.

The "knowledgeable" in here no little else but chatty gossip stories
as to the "reasons" for a magazine demise.

>
>While that's true, there were other types of transmitters on the air even
>before WW1. Arc transmitters and Alexanderson alternators were two types.
>Transmitters using tubes were in use well before 1920.

Irrelevant. From ALL the available literature of old-time amateur radio
prior to 1920, THE OVERWHELMING MAJORITY of amateur radio
transmitters were of the "spark" type.

"Spark" transmitters can be modulated SOLELY by ON-OFF KEYING.

The sole surviving Alexanderson Alternator VLF RF generator is in
Grimeton, Sweden, and used once each year for a brief period in a
ceremony for Televerket, the Swedish government's telecommunication
works. A ceremonial event, not one for any actual communication.

>The practical transmission of voice and music by radio was demonstrated as
>early as 1906.

ONLY with a rotary alternator with a WATER COOLED MICROPHONE.

Demonstration only, and then ONCE.

>> Since "morse code" was already in practice and was totally
>> on-off keying, it was adopted as The "radio code."
>
>Was that a bad thing?

Point of fact only. Do NOT "rewrite" what I wrote.

Morse code was developed for ON-OFF KEYING...on land lines.

"Spark" transmitters could communicate ONLY by on-off keying.

Morse code was first used commercially for communications in
1844. The first demonstration of radio as a communications medium
was 1896. That is a 52 year period allowing maturing of the ON-OFF
keying of telegraphy. Telegraphy by the Morse-Vail telegraph
system had spread worldwide by 1896.

>> The adoption of a long-existing (since 1844) LANDLINE code
>> says absolutely nothing about its efficacy in radio communications,
>> ability to "work through" or much else.
>
>Actually, the code used in radio is different than the code used in landline
>work.

Totally irrelevant to the point. Early primitive radio could ONLY work
with an ON-OFF KEYING method.

Despite all the variant dialects of "morse codes," ALL work ONLY by
ON-OFF KEYING. ALL.

>The efficacy of Morse code when applied to radio has been demonstrated many,
>many times over the past century-plus. Radio amateurs continue to demonstrate
>it every day.

Self-serving emotional exaggeration.

Radio amateurs worldwide continue to USE all the modes and modulations
allocated to them every day.

"Demonstration" refers to the first use of a method. That differs from USE.

>> On-off keying was
>> adopted simply because it was the ONLY WAY POSSIBLE for
>> early, primitive radio to allow communications. It's just
>> practical applied physics. Nothing else.
>
>And it works very well.

It does NOT work optimally compared to OTHER modes.

Radio as a communications medium is 107 years old. ON-OFF
KEYING of a radio frequency carrier is NOT a new concept nor is it
the best for communications.

>Even after the invention of other methods of transmission, the use of Morse
>code continued.

Irrelevant. Refusal to change has many and varied reasons. Only some of those refusals are relevant or applicable.

NO ONE is contending that ON-OFF KEYING was not the first.

Under the beginning subject thread, the subject was the CODE TEST.

You cannot explain or demonstrate or justify a reason for code test retention JUST BECAUSE IT WAS THE FIRST MODE IN RADIO.

The first radio-as-a-communications means was 107 years ago.

All other radio services have either dropped morse code mode or never considered its use when that radio service began.

Continued USE of morse code modes DOES NOT POSSIBLY ADVANCE ANY STATE OF THE RADIO ARTS. In ANY radio service, including amateur radio.

>buggy whip before giving out an modern day automobile driver's license.

Clint, it seems to be wasted effort to lay out the technical reasons for morse code mode communications disappearing on the world radio scene.

The very first demonstrations of radio as a communications medium was 107 years ago. In Russia and in Italy. Both demonstrators used morse code mode with on-off keying. What was used 107 years ago is NOT "state of the art" today.

USE of morse code mode is optional in the US radio amateur service.

Elimination of the morse code TEST for any amateur radio license is not defacto elimination of its use, nor banning its use.

Retention of the morse code TEST only has validity as an EMOTIONAL supplement to those already licensed in the amateur radio service who are sufficiently proficient to use the mode.

Mike Coslo imagines himself as a sort of "devil's advocate" but is, by all public evidence, little more than a PCTA who attempts to masquerade his trolling and baiting by some odd self-defined role as "arbiter" or "moderator."

This newsgroup is unmoderated.

>I heard in the later years that Wayne required a certain format for >articles or columns and if the author did not follow the format, then >the article or column did not get published.

Nearly ALL periodicals and publishers have minimum standards on manuscript format acceptible for consideration of publication.

Those same periodicals and publishers explain those in free documents called "Writer's Guides."

The quasi-standard format for all written formats in North America is letter size paper (8 1/2" x 11"), a minimum margin of 1" all sides, double-spacing conventional type font with pitch about 10 characters per inch, one side of the paper only.

Submission of a manuscript to a publisher is FAR from any guarantee of acceptance whether it follows a publisher's format or not. Unless one has a specific contract to submit work to a publisher, ALL manuscripts must pass through a series of reviews at the publisher.

It is a given that NO technically oriented publication will accept crayon on cardboard format manuscripts, handwritten or hand-printed text on non-standard paper stock.

Anyone who wishes to submit an article for publication should first contact a publisher's Editor by separate inquiry letter. Nearly every publisher will return a Writer's Guide to the format used by a publisher. Submissions are guaranteed absolutely nothing except some form of consideration AT the publication.

Because, as far as the "engineer" is concerned, it (code) isn't a "basic radio communications skill" today, Dick. It hasn't been for several decades, at least. As far as I know, not a single college-based communications, radio, electronics, or engineering, course today offers instruction in code "skill." Likewise, few, if any, employers are seeking that "skill." Therefore, it (code) simply isn't relevant to any of these careers.

Damn, Old Timer, you got it wrong again! In Boston, on Christmas Eve of 1906, modulating a spark transmitter, Reginald Fessenden made a holiday broadcast of a short spoken introduction, some recorded Chistmas music, and played "Oh Holy Night" on a violin.

Obviously a "spark" transmitter was not limited to ONLY (your emphasis) on-off keying.

Sunuvagun! Good luck on this one now.

We could only hope so! Wouldn't that be the ultimate irony. Using my
shortwave reciever is next to being a futile attempt. Have packed the
damned thing away for that same reason. In the truck, the AM radio can be a
trick to listen to if you are trying to listen to a station that is normally
always 5-9. If you run along a line of powerlines that happen to be
parallel to the roadway for a bit, forget listening to that station for a
while.....

[snip]

Dave, this is a fantastic idea. It opens up great possibilities for international co-operation between radio hams. When your spectrum in the USA is wiped out by BPL, we hams in the UK could lend you some of ours. I'm sure the ARRL and RSGB could negotiate an agreement, and sort out the reciprocal licensing issues.

Also, by the use of spectrum transformation, which you touched on in your follow-up posting, it would allow hams with restricted licences to experience propagation on bands on which they are not allowed to operate.

Yeah, I don't see the point either. There's a fellow near me (I'm
in Northern Virginia) who operates a remoted HF rig via the
Internet.

He calls it "Internet Radio". I honestly don't see the point of it.

And, DICK, what modes would be your failure to communicate your way of an
emergency if the fate of the planet depends on it? I wish, for once, you'd

answer an honest question. I suspect it'll be the usual, though. Complete silence because my question is not only one you can't answer (yeah, I'll make the bet that you are *NOT* proficient in all available modes of ham radio), and it's also one that makes a counter to the point you attempted to illustrate, above.

So, DICK, what mode would be our shortcoming if we were all looking to you to "save the planet?"

It's another way for Internet junkies to undermine the hobby by attempting to blur the line between amateur radio and Internet communications.

The idea is to talk hams into being content to *pretend* that they are using radio when in fact they are stuck off in an elaborate Internet chat. These people get a big "charge" every time they hear that they have succeeded in talking a ham into going off the air, this way.

To these "Amateur Telephone" devotees, the hobby would be meaningless without the non-ham stuff. Packet/Internet gateways, EchoLink, you name it: As long as it takes hams off the air and puts them on the Internet instead, they are all for it, 100%.

Many of the most outspoken advocates of "Amateur Telephone" just happen to work for corporations that stand to gain financially if Hams lose spectrum. Isn't that special? An amazing coincidence, isn't it?

So it it really a bit early to tell, but all the signs point toward good old Dave Stinson AB5S being another "Amateur Telephone" idiot, out to denigrate and undercut the hobby with an offer to "help out" amateur radio with the Internet.

I guess it will be best to wait and see... And if good old Dave manages to denigrate and undercut the hobby with his new proposal, maybe we will get an opportunity to see if he can pick a telephone out of his ass.

Thanks for the paranoid hillbilly rant.
When BPL gets cranking, there won't *BE*
any hobby if we don't have a "work-around."
As for "picking things out of my ass,"
I'd like to start with your nose.

>you were on-the-air.

Assuming that the intention is to allow multiple simultaneous users to independently tune around the band, the problem is the dynamic range (both in the analog RF front end and in the ADC) and high sample frequency required to transfer e.g. the whole 80 m or 2 m band over the internet. For the 2 m band, 5-10 MHz sampling rate is required, depending on region, and at least 16 bits/sample, so we are talking of data rates 160 Mbit/s, so even the 100baseT Ethernet is not sufficient to carry the signal, not to mention any ADSL connections.

And before anyone asks, no, you can not use (lossy) compression, since this would prevent decoding some of the signals at the user site.

However, a linear satellite transponder has a quite limited dynamic range and a modest bandwidth, so the requirement are far less demanding.

>The system is bi-directional, allowing
>QSOs between stations that normally could not communicate.

It does not make much sense to transfer the whole frequency band to the transmitter. It is much simpler to use a remotely controlled transmitter for each user at some separate location (far away from the receiving site to avoid blocking) and only transfer the base band over the internet.

>If you can't hear weak signals because of noise in your area,
>the concept allows you to build a "remote front end" and
>transport the radio spectrum in a quiet area right to your rig,
>bypassing the problems in your location.
>

>I believe this concept can be the answer to BPL,

If the reason is simply to avoid the local noise problems due to BPL/PLT/PLC and other electric interference when receiving, the transmitter is not affected by the power lines (carrying BPL) running parallel with your transmitter antenna, so why not simply run the transmitter manually from home and monitoring the band using a remote receiver at a quiet rural site.

However, it might not be a good idea to use the BPL to carry the signal from the remote receiver, since the BPL might be blocked during your transmissions and you could not run QSK :-(, which otherwise would be possible using a remote receiver site.

Don't worry about BPL. The ARRL, as with Morse Code, is making
a mountain out of a mole hill. If the military isn't worried about its HF
assets, why should Hams be worried?

>
>Yet no one has apparently made that pitch,

Actually, some folks have made similar pitches.

Some time back, QCWA petitioned FCC to give full privs to all hams who held General and Advanced licenses before Nov. 22, 1968 (the effective date of the first phase of "incentive licensing". Hans, K0HB, has twice officially proposed a simplified two-class system. The NCVEC folks are thinking of proposing changes that go far beyond dumping Element 1 (see:

http://www.qsl.net/al7fs/

Second item in the Table of Contents.

>and no
>one is petitioning to end written tests either.

As I wrote elsewhere, some written testing is needed to insure hams know the rules, including safety precautions. What I'm talking about is the whole concept of multiple license levels and "jump through the hoop" written tests as a "hazing ritual" for more privileges.

>Bottom
>line, the requirement for some technical knowledge is
>coupled to the freedom ALL US hams have to build,
>modify and/or repair their own equipment...even if they
>never want to. The knowledge is expected to help
>hams stay within tolerences and signal characteristics
>allowed because failing to do so can/will lead to
>interference.

Of course! That's why the written tests cannot be totally eliminated. As I have written elsewhere.

BUT (and it's a very big but), FCC says that almost all of the technical knowledge a ham needs to know is already adequately tested by the 35 question Technician test. That conclusion is inescapable from the fact that Techs are allowed to use all authorized amateur modes, frequencies, power levels and technologies above 30 MHz.

The only technical knowledge things that may not be adequately tested on the Tech written are some HF specific items of propagation, and some regulations.

There's nothing inherently different about a 6 meter rig and a 10 meter rig, is there? In fact, many modern rigs cover all ham bands from 160 through VHF! Why is a Technician licensee qualified to design/build/repair/align/modify and most of all operate a 6 meter rig but not a 15 meter rig - particularly when it's the same rig?

Look at the FCC enforcement logs. Problems due to technical incompetence are very few in the ARS, and those that do happen are not clustered on any

particular license class.

So why do we need all that written testing beyond Tech?

>Morse knowledge, on the other hand,
>has no potential for harming others, causing interference,
>etc.
>
And that's a good thing! One more reason to learn the skills! ;-)

But we're not talking about Morse. We're talking about written testing beyond
the minimum needed to insure safe, legal operation of an amateur station.

>> This isn't a straw argument. I've known hams who sold off their study

>Jim,
>
>If/when someone floats an RM to end written testing, then
>I'll be one of the first in opposition.

It's already been done - see the QCWA petition. See the NCVEC thinkpiece linked to, above. See Hans' proposal.

Waiting for an RM may be too late. Look at what happened with restructuring - FCC proposed 4 classes of license but enacted 3. They proposed improved written exams but instead cut back both the number and size of the written tests.

To be clear - I support a multi-level license structure and *better* written tests at all levels - code test or no code test. But that's just my opinion.

The question remains - how can proposals like Hans' be refuted, other than "I don't like it?"

What can be said in response to "You just want all hams to take a lot of written tests because *you* had to take a lot of written tests"

>For today, the code test
>is not, IMHO, in any way comparable.

That's not the issue I'm talking about.

>We'll just have to
>agree to disagree on that because I ain't gonna waste any more
>time arguing hypotheticals when those arguments aren't
>even being made to the FCC.
>
But they are being made to FCC, as shown above. What reasonable, rational arguments can we make to counter the above logic?

Steve, like Ham Radio magazine, now that 73 is "defunct" it's time for you to call into question of what value any of its contributing authors made to the ARS. Additionally, you may now call into question whether any of their work was original or not.

Finally, you may tell us how many articles you've had published by 73 magazine.

Best of luck, Brian
